Death by flu shot (when you think about the extraordinary steps the COVID vaccine takes to store this article will be more ominous) Improper storage recall, not the ones that killed people still?!

"The vaccine initiative, billed as a strategy to potentially offset complications from Covid-19, aims to provide free flu jabs to 19 million people. But the ambitious undertaking has come under fire after 25 people died, including a 17-year-old boy and a man in his 70s, after participating in the program. The number jumped from 12 deaths reported earlier on Thursday.

The vaccination drive was suspended for three weeks after it was revealed that around five million doses, which require refrigeration, had been stored at room temperature while being transpired to a medical facility. The program resumed on October 13. None of the people who died received the recalled doses." <https://archive.vn/JmodV>

from fakesoicansayshit: "Covid-19 mRNA vaccine is leaky and can accelerate deaths. Vaccines are 'perfect' (stops you from getting sick and getting others sick) or 'imperfect/leaky' (reduces symptoms, doesn't stop you from getting others sick). Imperfect vaccines can make viruses spread farther (host doesn't die) and become much deadlier (stronger versions survive). Don't hang out around vaccinated people, unless you are."
