

A COMPILATION OF COVID VACCINE REACTIONS

IN DECEMBER, WE STARTED TAKING SCREENSHOTS OF FRONTLINE WORKERS' ADVERSE REACTIONS TO THE BRAND NEW MRNA VACCINE - SIMPLY BECAUSE SOCIAL MEDIA WAS DELETING THEIR POSTS.

NOW WE HAVE THOUSANDS OF FIRST-HAND TESTIMONIES AND MEDIA REPORTS OF INJURIES & DEATHS.

UPDATED JULY 24, 2021

LET'S LOOK AT

THE DEATHS

In 1976, the rushed-to-market Swine Flu vaccine was halted after 25 deaths and dozens of case of Guillain-Barré syndrome occurred in the first 6 weeks of rollout.

*We are now at 27,000+ reported deaths in the US & Europe alone.
We now have a Guillain-Barré syndrome warning on the shots.*

UPDATE: CDC Reports 1,637 Deaths Following COVID-19 Vaccinations

The Centers for Disease Control and Prevention (CDC) told The Epoch Times in an email that as of March 8, over 92 million doses of mRNA vaccines for COVID-19 have been injected, with 1,637 deaths occurring following the injections. The CDC claims the vaccines are safe, but a comparison between the rates of deaths following the vaccines for COVID and those for influenza raises questions.

VAERS was put in place in 1990, to capture unforeseen reactions from vaccines.

“Established in 1990, the Vaccine Adverse Event Reporting System (VAERS) is a national early warning system to detect possible safety problems in U.S.-licensed vaccines. VAERS is co-managed by the Centers for Disease Control and Prevention (CDC) and the U.S. Food and Drug Administration (FDA). VAERS accepts and analyzes reports of adverse events (possible side effects) after a person has received a vaccination. Anyone can report an adverse event to VAERS. Health care professionals are required to report certain adverse events and vaccine manufacturers are required to report all adverse events that come to their attention.

**Since this article was published on March 6, 2021
the updated injury & death count (only for US & Europe) is:**

UNITED STATES VAERS Reporting System

491,218 adverse reactions including:

11,415 Deaths

11,221 Permanent Disabilities

3,313 Bell's Palsy

1,172 Miscarriages

4,381 Heart Attacks

100,000+ ER / Hospitalizations

Source: <https://wonder.cdc.gov/vaers.html>

EUROPE EudraVigilance Reporting System

1,509,266 adverse reactions including:

15,472 Deaths

7,217 Cardiac Episodes

79,807 Nervous System Disorders

5,099 Eye Disorders

18,369 Skin Disorders

6,844 Vascular Conditions

Death of Florida doctor after receiving COVID-19 vaccine under investigation

Karen Weintraub USA TODAY
Published 9:00 p.m. ET Jan. 6, 2021 | Updated 9:26 a.m. ET Jan. 7, 2021

A Florida doctor has died several weeks after receiving a COVID-19 vaccine, although it's not yet clear whether his death Monday was related to the shot he received on Dec. 18.

Dr. Gregory Michael, 56, an OB-GYN at Mount Sinai Medical Center in Miami Beach, died after suffering a hemorrhagic stroke apparently resulting from a lack of platelets.

In a [Facebook post](#), Michael's wife, Heidi Neckelmann, said he sought emergency care three days after the shot because he had dots on his skin that indicated internal bleeding.

Heidi Neckelmann
January 5 at 11:00 PM · 🌐

The love of my life, my husband Gregory Michael MD an Obstetrician that had his office in Mount Sinai Medical Center in Miami Beach Died the day before yesterday due to a strong reaction to the COVID vaccine.

He was a very healthy 56 year old, loved by everyone in the community delivered hundreds of healthy babies and worked tirelessly through the pandemic.

He was vaccinated with the Pfizer vaccine at MSMC on December 18, 3 days later he saw a strong set of petechiae on his feet and hands which made him seek attention at the emergency room at MSMC. The CBC that was done at his arrival showed his platelet count to be 0 (A normal platelet count ranges from 150,000 to 450,000 platelets per microliter of blood.) he was admitted in the ICU with a diagnosis of acute ITP caused by a reaction to the COVID vaccine. A team of expert doctors tried for 2 weeks to raise his platelet count to no avail. Experts from all over the country were involved in his care. No matter what they did, the platelets count refused to go up. He was conscious and energetic through the whole process but 2 days before a last resort surgery, he got a hemorrhagic stroke caused by the lack of platelets that took his life in a matter of minutes.

He was a pro vaccine advocate that is why he got it himself.

I believe that people should be aware that side effects can happen, that it is not good for everyone and in this case destroyed a beautiful life, a perfect family, and has affected so many people in the community Do not let his death be in vain please save more lives by making this information news.

Johns Hopkins Scientist: 'A Medical Certainty' Pfizer Vaccine Caused Death of Florida Doctor

Dr. Jerry L. Spivak, an expert on blood disorders at Johns Hopkins University, told the New York Times Tuesday that he believes "it is a medical certainty" that Pfizer's COVID vaccine caused the death of Dr. Gregory Michael.

Autoimmune means that something in the vaccine may be provoking the body to create antibodies to its own platelets, could be because of molecular mimicry, or cross reactivity between proteins.

ITP has been documented to occur after the MMR vaccine, as well as influenza vaccines, DTP vaccine and hepatitis A vaccines. ←

Why was no one warned that immune thrombocytopenia is a reaction to the COVID vaccine?

The New York Times

Covid Vaccine Recipients Developed a Rare Blood Disorder

By Denise Grady

Feb. 8, 2021 Updated 5:07 p.m. ET

One day after receiving her first dose of Moderna's Covid vaccine, Luz Legaspi, 72, woke up with bruises on her arms and legs, and blisters that bled inside her mouth.

She was hospitalized in New York City that day, Jan. 19, with a severe case of immune thrombocytopenia — a lack of platelets, a blood component essential for clotting.

The same condition led to the death in January of Dr. Gregory Michael, 56, an obstetrician in Miami Beach whose symptoms appeared three days after he received the Pfizer-BioNTech vaccine. Treatments failed to restore his platelets, and after two weeks in the hospital he died from a brain hemorrhage.

"I think it is possible that there is an association," Dr. James Bussel, a hematologist and professor emeritus at Weill Cornell Medicine who has written more than 300 scientific articles on the platelet disorder, said in an interview. "I'm assuming there's something that made the people who developed thrombocytopenia susceptible, given what a tiny percentage of recipients they are."

He added: "Having it happen after a vaccine is well-known and has been seen with many other vaccines. Why it happens, we don't know."

Ms. Legaspi was strong and in good health before receiving the Moderna vaccine. But when she was admitted to the city hospital in Elmhurst, Queens, her platelet count was zero. Normal readings range from 150,000 to 450,000, and anything under 10,000 is considered very dangerous and in urgent need of treatment.

Doctors ordered Ms. Legaspi to not even get out of bed without help, for fear that if she fell and injured herself she could hemorrhage. They began giving her the standard treatments, including platelet transfusions along with steroids and immune globulins meant to stop her immune system's war on her platelets.

Nothing worked. Her platelets would rise a bit and then crash again between treatments.

As the days passed with no progress, Ms. Legaspi's daughter, aware of Dr. Michael's death, worried increasingly that her mother would suffer a brain hemorrhage.

"I don't think she understands she's like a ticking bomb," the daughter said in an interview on Jan. 28, after her mother had been in the hospital for more than week with no improvement. "I don't use the term. I don't want to tell her that."

Dr. Gregory Michael

Ms. Legaspi,

Another vaccine recipient, Sarah C., 48, a teacher in Arlington, Tex., received the Moderna vaccine on Jan. 3. She asked that her full name not be used to protect her privacy.

Two weeks later, she began to have heavy vaginal bleeding. After two days she saw her obstetrician, who ordered blood work and scheduled other tests. A few hours later, he called and urged her to go straight to the emergency room. He was stunned and hoped it was a lab error, but her blood count showed zero platelets. She had had a checkup with completely normal blood-test results less than a week before being vaccinated.

The reading of zero platelets was not a lab error. The results were confirmed in the emergency room, and doctors there also noticed red spots on her wrists and ankles, caused by hemorrhages under the skin. Sarah C. had seen the spots, but ignored them.

She spent four days in the hospital, receiving platelet transfusions, immune globulins and steroids to restore her platelet count.

She described the experience as terrifying. "Especially when people say they'd never seen this before, that you could bleed out or hemorrhage," she said. "That was the biggest concern, and just not knowing. The gentleman in Florida, he didn't make it. Certainly the fear was there."

If she had known enough to recognize the red spots and bleeding as danger signs, she said, she would have gone to the emergency room much sooner.

MAY 25 - gets shot

JUN 3 - ER →

JUN 9 - dead

✓ Camilla Canepa, the 18-year-old from Sestri Levante vaccinated with AstraZeneca, died

Camilla Canepa, the eighteen-year-old from Sestri Levante hospitalized Sunday at San Martino in Genoa after a cavernous sinus thrombosis and operated on to remove the thrombus and reduce intracranial pressure, died. She had been vaccinated with AstraZeneca's vaccine on May 25 on the open day for over 18s.

The girl received the vaccine on May 25 during an Open Day. On June 3 she went to the emergency room for the first time with headache and photophobia. Always at the San Martino in Genoa. She had undergone brain CT scan and neurological examination, both negative, and was discharged with a recommendation to repeat the blood tests after 15 days. On June 5 she returned to the emergency room with motor deficits. Subjected to cerebral CT scan "with hemorrhagic outcome", she was transferred to the neurosurgery of the hospital where she had undergone two operations. In the Prosecutor's Office there are four open files for people who have died after vaccination. The first case concerns the 32-year-old teacher Francesca Tuscano who was inoculated with Astra-Zeneca. The latest suspected death is on May 15 and concerns a frail 83-year-old woman who was administered Pfizer. Of the four cases, the coroner Luca Tajana is dealing with the hematologist Franco Piovella.

ROME

Surgeon who operated on young Italian vaccine victim: 'You have never seen anything like this'

Camilla Canepa was operated on by Gianluigi Zona, director of the neurosurgical and neuro-traumatological clinic of the San Martino hospital: "I had never seen a brain that was affected by such an extensive and severe thrombosis."

The neurosurgeon on duty in San Martino that night was Alessandro d'Andrea, who also called the chief physician to his side at the operating table. "We decided to have a decompression craniotomy, in which the skull is opened to relieve internal pressure."

Zona recounted the experience: "All venous sinuses were blocked with thrombi, a scenario I have never seen in my many years in this profession. Think of the venous sinus as the river in the middle of a valley where several streams converge. If a dam is built in the middle of the watercourse, the river swells and the tributaries can no longer drain at this point, so that the pressure rises upstream."

edited for length

But the girl's family, assisted by the lawyer Angelo Paone, is firm on this point. "Camilla had no disease," explained their lawyer. Supporting their claim, are two different CT scans. She had undergone the two scans, and was discharged after the first one that had not shown the situation of the thrombosis in progress, but immediately transferred to the hospital after the second showing that her health had been compromised.

Utah woman, 39, dies 4 days after 2nd dose of COVID-19 vaccine; autopsy ordered

SALT LAKE CITY (KUTV) — During a [KUTV investigation into COVID-19 vaccine side effects](#) and where to report them, we found four reported deaths, filed by Utah families and their caregivers to the CDC's Vaccine Adverse Effects Reporting System.

One case stood out, a [39-year-old single mom from Ogden](#) who died four days after her second dose of the Moderna COVID-19 vaccine. Her family, who is now waiting on an autopsy, held a celebration of life for her this past weekend.

Kassidi Kurill, by all accounts, was healthy, happy and "had more energy" than just about anyone else around her. Her family told 2News she had no known health problems or pre-existing conditions.

Four days after Kurill's second dose of the COVID-19 vaccine, she was gone — dead before most of her family could say their goodbyes.

"She came in early and said her heart was racing and she felt like she need to get to the emergency room," Hawley said.

"They did a blood test and immediately came back and said she was very, very sick, and her liver was not functioning," Hawley said.

Kurill was flown to Intermountain Medical Center in Murray, a trauma center where they had the ability to do transplants if needed. Her liver was failing and a transplant, doctors believed, was her best option at survival.

She died, he said, 30 hours after they arrived in the emergency room.

Hospital blamed over women's death from heart inflammation after vaccination

By TOI STAFF
2 April 2021, 8:58 pm

(capture: Channel 13 news)

Shirel Hilel, 22, received her second vaccine dose two weeks ago, her sister Nofar told Channel 13 news, in a segment aired Thursday evening. She later reported feeling unwell and said she was experiencing muscle pain.

However, Hilel's condition worsened and she began to have difficulty breathing and pains in her chest and was taken to Safed's Ziv Medical Center.

At the hospital, Hilel was diagnosed with myocarditis, inflammation of the heart muscle, which boyfriend Eyal said the doctor compared to a swollen shoulder.

"On the last day of hospitalization, a deterioration in her situation began. Persistent heart rhythm disturbances developed that didn't respond to care and after continued resuscitation, she was pronounced dead. We share in the sorrow of the family over the heavy loss," it said in a response to the network.

Last month, the Health Ministry instructed hospitals to report any cases of heart inflammation among the vaccinated.

"After several such cases of this type happened close to receiving the vaccine, it was decided to put a specific focus on this issue," Tal Brosh, head of the Infectious Disease Unit at Assuta Medical Center in Ashdod, told the Ynet news site at the time.

Benjamin G. Goodman

Benjamin Goodman went to a Walgreens pop-up COVID-19 vaccine clinic in Chelsea, New York on Saturday, March 13. He received the Johnson & Johnson shot, according to his stepmother Pamela Goodman. Benjamin texted his father, Jeff Goodman, and told him he received the shot. Benjamin had a severe headache and started feeling ill. He fell asleep, hoping the symptoms would pass after some rest. Mr. Goodman woke up at 1 a.m. with a high fever and chills. His fiancée, Lindsay Janisse, was awakened to Mr. Goodman having seizures at 4 a.m.. Ms. Janisse called 911 as Mr. Goodman went into cardiac arrest. Paramedics tried, unsuccessfully, to revive him on the scene. Mr. Goodman was rushed to a nearby Mount Sinai Hospital. But he was pronounced dead at 6:05 a.m. Sunday morning, March 14.

Obituary

It is with deep sadness we announce the passing of Ben Goodman, age 32, who died suddenly due to heart failure on March 14, 2021 in New York City. Ben is survived by his fiancée, Lindsay Janisse, his mother Cindy Shelley, his father and stepmother Jeff and Pamela Goodman, his brothers Andrew Shelley and Carson Goodman, his sister Natasha Goodman, his dogs Kiva and Wilson, and his many beloved colleagues and friends. Born on March 8, 1989 in Manhattan, Ben graduated from Northport High School in June of 2007 and received a Bachelor's degree in International Business from Florida Atlantic University in December 2014. In March of 2021, he was accepted into Michigan State University's MBA program and had plans to enroll to further his education.

CDC says it is NOT REQUIRED to vaccinate teachers to make it safe to return. Some teachers and support staff have been working in a classroom with kids since November. In fact we didn't have a choice whether or not we wanted to come back. We have plexiglass shields, plenty of PPE, its warm enough to open doors and windows.... Vons workers, postal workers, Costco workers...they come into contact with thousands of people in a day, (long before vaccinations) why do we think it's safe for them to be at work but not all teaching staff? Phase I, II and III teachers and support staff have been back and no one bats an eye.... Why is it safe for us to be there but not you?

Stephanie Wasil posted on Feb 15 that she did not want to take the vaccine and wanted to get back to her teaching job (in person), However, due to pressure from work and family, she took the Moderna shots. Her second one was 4/2/21 and on that day she developed a fever, headache, no appetite and energy. On 4/6/21 she wrote in her personal journal that she couldn't even walk 10 feet. On 4/10/21 she dialed 911 and sent a message to her ex-husband Zach "HELP" (he lives on the same property). He arrived finding her on the floor saying she couldn't breath. She was rushed to the ER where they worked on her for 3 hours before she passed.

I was so excited about my sold out Cyprus villa weekend this weekend. Woke up feeling fine and then within an hour I had fully body shakes, all my joints seized and I was struggling to breathe and was cold to the bone with a persistent headache and dizziness. I was convinced I'd come down with Covid! Mum and dad came to look after me and took me for a covid test, which thankfully was negative... but it still doesn't explain what the problem is. Unfortunately this now means I am having to postpone my Cyprus villa weekend and I am contacting everyone individually to apologise. Thank fully the villa owners are happy for the whole thing to just be moved. Now, after an IV, I'm off to get full blood work done to see if we can figure out what the problem is. I'm so sorry to everyone I have let down as I was so looking forward to this weekend, but I hope you'll be happy to move to the new dates with me.

DEATH PROBE 'fit and healthy' engineer, 27, dies three weeks after having AstraZeneca Covid vaccine as NHS investigates his death

Jack Last, 27, who was "surprised" to be offered the job, was admitted to hospital on April 9 suffering from headaches.

[Holly Christodoulou](#)
Apr 27 2021, 6:18 ET |

Jack Last died three weeks after receiving the AstraZeneca jab Credit: SWNS

Tragically the 27-year-old, from Stowmarket, Suffolk, died just 11 days later after his condition deteriorated.

The NHS confirmed they have launched a probe into the circumstances surrounding the tragedy.

Jack received the jab on March 30 - days before the UK's medicine regulator advised under-30s should be offered an alternative to the AstraZeneca vaccine.

'FIT AS EVER'

Jack's heartbroken family are now desperately searching for answers and are waiting for a post-mortem to confirm a cause of death.

His sister Jasmine said her "amazing brother" was as "fit as ever" when he was invited to get the vaccine.

She said: "He didn't know why he'd been told to book the appointment.

"But Jack was a very easy-going guy - he wasn't one to make a fuss.

"So quite simply, as he received the text that he should be booking it up, he did just that and booked it up with no fuss. That was his nature."

Jasmine said the "always smiling" field service engineer brought the family "so much happiness".

'DEVASTATED'

Jasmine revealed how aged 18, Jack got his Private Pilot's Licence and regularly flew around East Anglia and the UK.

And in 2018, he travelled to California and flew over landmarks such as the Golden Gate Bridge and Hollywood sign after receiving a US pilot's licence.

The intrepid engineer also spent six months working with the British Antarctic Survey in Antarctica.

Jasmine said: "He was the best brother I could have ever asked for, and I will really miss him.

"Jack's family and friends will remember how he always made them laugh with his witty sense of humour and how he made everyone feel happy to be with him.

Mark R. Weaver @MarkRWeaver · 8h

If you're a reporter inquiring about the recent death of University of Cincinnati student (and Columbus area resident) John Francis Foley, this is the only on the record statement from his family. Please do not contact the family or funeral home.

STATEMENT FROM MICHAEL AND MARY BETH FOLEY

Our beloved son **John Francis Foley** is gone, and our family mourns the loss of this wonderful and sweet joy of our lives. While the facts remain unclear how he died, we are rejoicing in how he lived: caring for others, lit with God's grace, and generous to all. We know the doctors involved are doing their best. We must be patient, and we ask everyone else to be patient, too. John was going to be a doctor, so this is what he would want.

We understand many want to know more about his death -- we do, too -- but we ask people to understand that this is the time for our family to grieve in private. Thank you.

###

The family is not taking media inquiries.

John Francis Foley

The Angels came down from heaven on April 11, 2021 to collect for repose the soul of John Francis Foley, age 21. John was one of them, and the Lord could no longer bear Heaven without him. John is the beloved son of Michael and Mary Beth Foley and the adored baby brother of Emma and

Patrick Foley. He was a graduate of St. Charles Preparatory School. Among John's many accomplishments, he was a National Latin Scholar, Altar Server of the Year, Eagle Scout and National Honor Society Member. John was a junior studying Medical Sciences at the University of Cincinnati, and was on the Dean's list every semester. In addition to being an excellent student, he was very active in the community and volunteered with the Saint Vincent De Paul Society, Breakthrough Cincinnati and the Parker Woods Montessori Public School. At UC, John was blessed to have met a group of amazing roommates and friends who John loved very much. They will gather on Wednesday, April 14 for a Vigil at 8pm for John in Burnet Woods Park at the University of Cincinnati. John's family cannot thank them enough for being John's family at UC. John was a generous, caring and loving friend. He was lit with grace from within that shown in his ready smile. John loved the Bearcats, but cheered for Notre Dame

Health care worker dies after second dose of COVID vaccine, investigations underway

Tim Zook's last post on Facebook brimmed with optimism. "Never been so excited to get a shot before," he wrote on Jan. 5, above a photo of the Band-Aid on his arm and his COVID-19 vaccination card. "I am now fully vaccinated after receiving my 2nd Pfizer dose."

Zook, 60, was an X-ray technologist at South Coast Global Medical Center in Santa Ana. A couple of hours later, he had an upset stomach and trouble breathing. By 3:30 p.m. it was so bad his colleagues at work walked him to the emergency room. "Should I be worried?" his wife, Rochelle, texted when she got the news. "No, absolutely not," he texted back. "Do you think this is a direct result of the vaccine?" she typed. "No, no," he said. "I'm not sure what. But don't worry."

There were suspicions of COVID and a diagnosis of congestive heart failure. Zook was put on oxygen, then — just four hours later — a BiPAP machine to help push air into the lungs. Multiple tests came back negative for COVID.

Shortly after midnight on Jan. 7, the hospital called. Zook was in a medically induced coma and on a ventilator to help him breathe. But his blood pressure soon dropped and he was transferred to UC Irvine Medical Center. "On Friday I get a call, 'His kidneys are failing. He needs to be on dialysis. If not, he could die — but there's also a chance he might have a heart attack or stroke on dialysis because his blood pressure is so low,'" Rochelle Zook said.

By 4 a.m. Saturday, Jan. 9, Zook had gone "code blue" twice and was snatched back from the brink of death. There was a third code blue in the afternoon. "They said if he went code blue a fourth time, he'd have brain damage and be a vegetable if he survives," Rochelle Zook said.

Later that day, Tim Zook died.

CORRIERE DEL VENETO

Belluno, un medico indagato per la morte di Davide Bristot.

The boy's father: "My son has always been healthy"

In Sedico, in the house of the Bristot family, father Paolo cannot rest: "We don't know how to give us any explanation for what happened, my son had always been well and seemed perfectly healthy". **And then the answer can only come from the autopsy:** on Monday the prosecutor of Belluno will entrust the task to the coroner Antonello Cirnelli, and the medical records and all the documents compiled by the emergency room staff on duty on Tuesday night will be acquired, when Davide was taken to hospital with "neck pain and vomiting". **What worried him above all was the headache that had been afflicting him for a few days and that in the afternoon had become unbearable.** However, it seemed like a passing malaise, for a boy like him, who had never had any serious health problems, was fit and had played volleyball since he was a child. Instead, on Tuesday evening, in a pizzeria with friends, he ran to the bathroom to throw up. And at that point the parents decided to accompany him to the Belluno hospital.

"They told us that everything was fine, no one thinks that an 18-year-old boy could have something serious", the family members vented who also yesterday repeated that they did not want to accuse anyone "but only to understand what happened". **Back home, the student immediately went to bed. And there his mother found him the next morning, now lifeless. The coroner of the prosecutor's office (who will be joined by Sarah Nalin, the consultant appointed by the family) will have to clarify what killed him, but also if there was any way to intervene, and therefore if the medical staff operated correctly.** However, any correlation between death and the Covid 19 vaccine that the student had done a month ago seems excluded.

Woman dies after first dose of AstraZeneca vaccine

Health officials in South Australia have confirmed a 72-year-old woman died after having the AstraZeneca vaccine.

Premier Steven Marshall said the Therapeutic Goods Administration confirmed a case of thrombosis with thrombocytopenia syndrome (TTS) in a 72-year-old woman was likely linked to the AstraZeneca vaccine.

TTS is a rare event involving serious blood clots with a low blood platelet count. It is triggered by the immune system's response to the AstraZeneca vaccine and is different from other clotting conditions, according to the TGA.

39-year-old nurse aide dies 'within 48 hours' of receiving mandated COVID-19 shot

HURON, Ohio, January 27, 2021 (LifeSiteNews) — A 39-year-old woman with no known comorbidities died unexpectedly in northern Ohio within 48 hours of receiving a COVID-19 vaccine, which was reportedly required by her employer.

Janet L. Moore, a nurse aide at Admirals Pointe Nursing Home (APNH) in Huron, was found unresponsive in her car outside her apartment complex on December 31 around 8:00 p.m., her brother Jacob Gregory told LifeSiteNews.

"She was coming home from work and as soon as she drove into her parking lot she passed away," he said. "According to her neighbors she wasn't feeling good directly after the vaccine, and then ever since the vaccine she was actually feeling nauseated, she'd have like migraines and stuff like that. And then, within 48 hours, she ended up passing away."

Gregory mentioned that his deceased sister, a mother of two sons, was required to receive this vaccine due to her nursing home employment.

A nursing home in Janesville, Wisconsin, which mandated their employees receive these experimental biological agents did in fact lay off workers who declined the injections.

Nearly a dozen employees were forced from their jobs due to the policy, and 27 wrote letters of complaint seeking to have the policy changed.

Their concerns included how this biological agent, which was rushed through development and testing, may have dangerous, unknown long-term effects, while others expressed worries about it affecting their pregnancy or fertility.

More generally they objected to being told they had to take a vaccine which was not approved by the Food and Drug Administration (FDA). While these vaccines have been given emergency use authorization by the FDA, neither has the full approval of the agency.

The U.K. government issued a 10-page report late last year that warned coronavirus vaccines should not be used by pregnant or breastfeeding mothers. With regard to their impact on fertility, the document simply states it is "unknown whether COVID-19 mRNA Vaccine BNT162b2 has an impact on fertility."

Safety concerns with these vaccines also include "allergic" and "potentially fatal reactions," that they may actually cause an increased vulnerability to the virus, and that, indeed, worries over long-term effects remain legitimate as these vaccines lack proper testing.

In addition, the FDA also drew up a document this fall listing the possible side-effects from a COVID-19 vaccine, including strokes, encephalitis, auto-immune disease, birth defects, Kawasaki disease, and death.

CBS Sacramento Auburn Woman Warns She Saw Grandfather's Aid Die After COVID Vaccine

By Marissa Perlman January 25, 2021 at 12:45 pm

AUBURN (CBS13) – The Placer County Sheriff's Office announced Saturday that a person tested positive for the virus in late December and died hours after getting the vaccine on Thursday.

Now, there are questions from the community on the safety of the vaccine. An Auburn woman says she witnessed the tragedy first hand.

In a post on Facebook, she said she saw her grandfather's aid, a 56-year-old man, get the vaccine at a senior living facility on Thursday.

"Twenty minutes later he realized his legs felt tingly and he was having shortness of breath. He was wheeled out in an ambulance... 1 hour later he was in ICU on a ventilator and three hours later he passed away," she wrote.

Nurse dies in her sleep in Frosinone: "Natural causes", but she had been vaccinated

of DINO GRENADE - January 18, 2021

All the media write that Elisabeth Durazzo, the young nurse on duty at the "Fabrizio Spaziani" hospital in Frosinone, suddenly died in her sleep, one of the first hospitals in Lazio that between the end of December and the beginning of January all health personnel underwent a massive vaccination against Covid.

Pfizer's first five 'Comirnaty' vaccines were administered on **December 29 in the presence of the governor of Lazio Nicola Zingaretti** and the councilor for Health Alessio D'Amato, then in the following days it was the turn of all the other health professionals, including doctors and nurses.

About ten days after the end of vaccinations, on January 13, Eli Durazzo, 39, with a small son, according to the media, died in sleep of cardiac arrest.

Vivek, the 59-year-old well-known Tamil actor was brought to the emergency room of the hospital in an unconscious condition around 11am on Friday by his wife after he complained of discomfort. This was the first time that the actor had come to hospital with an attack like this, Dr Sivasamy said.

On Thursday, the actor was declared as state's ambassador for creating public health messages. He took the Covaxin in Tamil Nadu Government Multi Super Speciality Hospital in Chennai and urged many others to come forward to take the vaccine.

Tamil actor Vivek passed away in a Chennai hospital early on Saturday following a cardiac arrest. He was 59.

Vivek was admitted to the intensive care unit of the hospital on Friday morning after he suffered a heart attack.

Vivek was in the news on Thursday for his efforts to remove the fear of vaccination among the public. Instead of going to a private hospital, he chose to get vaccinated at a government hospital to spread awareness.

He told media persons after taking the first jab of the COVID-19 vaccine, "The government hospitals provide healthcare services to the majority of poor people. Many have doubts about vaccination and its side effects. There are also several rumours doing the rounds. I want to put an end to all the rumours. I want to show people that there is no danger in getting vaccinated."

He added, "On the contrary, it will protect us. And it is not like this vaccination will completely prevent us from getting Covid-19 infection. After the vaccination, even if we catch the virus, there won't be death. So after vaccination, we should still follow the safety guidelines."

Gloucester resident dies within hours of receiving Pfizer vaccine

58-year-old Gloucester resident Drene Keyes was a gifted singer, a mother and grandmother of six.

Unexpectedly, Lisa lost her mother on Saturday within a couple of hours after Keyes received the Pfizer vaccine in Warsaw.

Keyes had diabetes, sleep apnea and was obese. Her job made her eligible for the first dose. So, on Saturday, Keyes got the Pfizer vaccine and spent 15 minutes in the mandatory observation period.

The coworker she was with said she was trying to get in the car and said, "Something is not right. Something's not right."

Doctors later on told Jones her mother couldn't breathe and started vomiting. They did administer an EpiPen, CPR and oxygen as well.

"They tried to remove fluid from her lungs. They called it 'flash pulmonary edema,' and doctors told me that it can be caused by anaphylaxis," said Jones. "The doctor told me that often during anaphylaxis, chemicals are released inside of a person's body and can cause this to happen."

"Why are we allowing people with underlying conditions to be guinea pigs for a vaccine that is still in clinical trials and emergency use?" Jones questioned.

NY man dies shortly after vaccination

NEW YORK - A man died shortly after receiving a COVID-19 vaccination at the Javits Center in Manhattan but it was not believed to be due to an allergic reaction, state officials say.

The man, in his 70s, collapsed as he was leaving the vaccination site on Sunday morning.

"On-site security and first responders were by his side within seconds, but sadly the man passed away a short time later at a hospital," New York State health Commissioner Howard Zucker said in a statement to [Fox5NY.com](https://www.fox5ny.com).

The incident occurred approximately 25 minutes after he was vaccinated, and following the required 15 minute observation period. Heath officials say he exhibited no adverse reactions or any distress. They added that initial indications are that the man did not have any allergic reaction to the vaccine.

Edinburgh mum found dead 48 hours after having second Covid vaccine

Gordon Tait, Chief Reporter

30 Apr 2021, 21:49 | Updated: 30 Apr 2021, 21:49

A MUM was found dead in bed 48 hours after having her second Covid vaccine.

Tragic Karen Tully, 59, felt dizzy and reported having a headache in the wake of her follow-up AstraZeneca jab.

The asthma sufferer, who only returned to her job as a police 999 call handler on Monday after shielding for a year, took paracetamol before husband Richard, 63, left for work on Thursday.

But he discovered his wife of 37 years lifeless when he returned three hours later to the couple's home in Colinton, Edinburgh.

The shattered school coach driver said: "She had her jab on Tuesday morning and went to work that night. But she wasn't feeling great so she came back early.

"I left for work about 6am on Thursday and gave her a cup of tea and a couple of tablets for her sore head. When I left she was fine. I came back just after 9am and that's when I found her."

Ambulance crews raced to the pad but Karen was pronounced dead at the scene.

Chief Superintendent Roddy Newbigging paid tribute to former medical secretary Karen, who joined the Bilston centre 15 years ago.

He said: "She provided a highly professional service. She will be sorely missed by all of her colleagues and the thoughts of Police Scotland are with her family."

The AstraZeneca vaccine has been linked with rare blood clots. But this is believed to be the first reported death of anyone so soon after having their second jab.

Last month, solicitor Neil Astles, 59, from Warrington, Cheshire, died two weeks after his first AZ dose in a suspected blood clot tragedy.

Sevenoaks dad's heartbreaking final text to wife before dying suddenly aged 32

A children's psychologist described as "the perfect dad and husband" died suddenly last week at the age of just 32.

Dr Stephen Wright had sent a heartbreaking final text to wife Charlotte when she asked if she should let his mother know he was in hospital, replying "Not yet."

The mental health specialist lived with Charlotte and two young sons in [Sevenoaks](#).

He had been due to start a new position as senior clinical psychologist at Great Ormond Street Hospital last Monday.

Instead, in the early hours of the morning on January 26, Mr Wright suffered two massive bleeds to the brain.

An initial scan discovered bleeding on Stephen's brain, and a second one would discover further significant bleeding. He had suffered a very rare cerebral venous stroke.

Stephen was placed on life support and kept there for several days having made clear he wanted his organs to be donated.

sky news

The family of an Italian woman who died weeks after having the Oxford-AstraZeneca coronavirus vaccine have told Sky News they are taking legal action to establish whether the jab was to blame.

The case comes after 55-year-old Augusta Turiaco, from Messina, Sicily, received her COVID jab on 11 March before her condition worsened in the days following her vaccination.

The music teacher was keen to receive a jab as she worked with young people and even expressed her joy at getting the dose in a Facebook post, writing "fatto" - the Italian word for "done".

She developed a high temperature and a very bad headache, before going for blood tests and ultimately scans that identified blood clots.

She fell into a coma on 28 March and died on 30 March - 19 days after having the AstraZeneca injection.

"My sister was in excellent health, she did not take drugs because she did not have diseases such as hypertension or diabetes."

Medical records seen by Sky News showed blood clots had formed in Ms Turiaco's body, including in her brain.

Her platelet levels had fallen.

These are conditions also found in others who died after having the Oxford-AstraZeneca vaccine.

The legal proceedings launched by the family are just one of a number of cases across Europe being mounted against AstraZeneca.

The family's lawyer, Daniela Agnello, told Sky News: "The excellent state of health of Ms Turiaco, the absence of previous pathologies, the very short period of time between the administration of the vaccine, the appearance of the first illnesses and the very serious clinical picture and then death."

Dance Theatre of Harlem mourns the loss of DTH School and company alumna NaTalia Johnson. The news of her passing has sent shocking waves of sadness throughout the DTH family. Natalia was a beautiful dancer with a facility and technique that Arthur Mitchell loved greatly.

Professional ballerina NaTalia Johnson (38) died unexpectedly 13 days following her shot. Her sister stated Natalia's cause of death is still unknown, but she most likely suffered a heart attack or stroke. Based on her sister's account, NaTalia held out her arms and became stiff.

Some minutes later, her body started tightening, that was the time I came to know that she was really in a distress, I immediately placed her on the floor and began performing CPR. And when she didn't respond I ran out and yelled to our neighbours to call 911.

Police and emergency personnel arrived so quickly and did all they could to revive her back but sadly she didn't make it.

TheStar Indonesian youth dies after receiving AstraZeneca vaccine shot

JAKARTA, May 11 (Bernama): A 22-year old Indonesian youth died last Friday, a day after receiving the AstraZeneca Covid-19 vaccine shot.

According to local media reports, Trio Fauqi Virdaus from Buaran, Jakarta had received the vaccine shot on last Thursday (May 6) and soon after developed fever. He drew his last breath the next day while being treated at a hospital.

The local media quoted family members saying Trio Fauqi was hale and hearty before the vaccination, and had no chronic health issues.

Mum-of-three, 43, dies after suffering blood clots following Covid vaccine

THE SUN, A NEWS UK COMPANY

Ellie Cambridge 10:52, 3 Jun 2021

Tanya Smith, 43, was rushed to hospital after waking with stomach cramps days after her jab.

Tanya was invited to have a job early as she was a key worker and a carer for her young daughter who had disabilities.

Kenneth said by Good Friday - just over a week after the Covid jab - Tanya was "gravely poorly" in hospital and died a day later.

The childminder had felt "pretty rough" after having the vaccination in March, her partner said.

After being admitted to Plymouth's Derriford Hospital it was found she had multiple blood clots.

Tanya, from Mutley in Plymouth, suffered a heart attack and then deteriorated before dying in hospital on April 3.

According to forensic doctors, the death of a young woman was related to the AstraZeneca vaccination

Published on 04/28/2021

It is one of those tragic stories that happened during the vaccination campaign against the **coronavirus**: According to the Herford district, a 32-year-old woman died in connection with a vaccination with Astrazeneca. According to Wednesday's announcement, an immune reaction to the vaccine led to the death of Dana Ottmann, according to a finding by the University of Greifswald. The cause was therefore a coagulation disorder with bleeding into the brain.

Her mother now expressed dismay at the death of her daughter, who worked as a psychologist. On March 9, she found them lifeless in the bathroom, as Petra Ottmann told the "**Westfalen-Blatt**". Because the 66-year-old was afraid that something might be covered up when her daughter died, Ottmann sought the public at the end of March to find out the truth.

Son 'dearly regrets' telling his mum to get the AstraZeneca vaccine

Prasad used to speak to his mum every day but all that changed "in a split second" last month.

Three days after the Canberra man's 79-year-old mother Ratna received her second dose of the AstraZeneca vaccine in India, he called her about 4pm (AEST time) to ask how she was feeling and she said she was fine.

When he called again, just two and a half hours later, she was already in a coma.

From what he can gather from relatives in India, his mum went into the backyard to put some garbage out for collection and went back into the kitchen.

"She was holding on to the bench, she called out to my niece twice and by the time my niece got there she was already closing her eyes and went into a deep coma," he said.

She never regained consciousness, although she survived for roughly five days before dying on May 6.

He says his family and friends know of seven people in India who have all died after getting the vaccine.

Now most of his family and friends don't want to take the risk of getting the vaccine themselves.

A feeling is also spreading among them that older people are being "sacrificed" and that Prime Minister Scott Morrison and the government have written them off.

"They feel they are too old and that society doesn't need them anymore so they (the authorities) wrote them off," Prasad said.

"It's that kind of feeling, I have heard the comment from six work colleagues and friends."

Prasad believes the vaccine did play a part as his mother was the youngest of six siblings who are all still alive. A MRI (magnetic resonance imaging) report also showed Ratna had a massive haemorrhage in the left frontal lobe of her brain.

Sonia Battaglia died: she had entered a coma a few days after the vaccine

March 18, 2021 12:16 pm

The health conditions of Sonia Battaglia, the 54-year-old hospitalized in intensive care at the hospital of the Sea, have worsened irreversibly until her death today. The confirmation came, hard as a boulder, from Raffaele Conte, son of Sonia Battaglia: "My mother is dead", he tells NapoliToday. It doesn't add anything else. Too much pain. Raffaele hoped until the last that the doctors of the hospital of the sea would be able to rescue his mother from the coma in which she had fallen. After the assessment with neurological criteria, carried out in the hospital, as per protocol, in the afternoon the death of the 54-year-old was confirmed and an autopsy was ordered.

On March 1, Sonia underwent the AstraZeneca vaccine, batch **ABV5811**, which was then withdrawn throughout Italy. Initially he had not experienced any particular problems, but in the following days his condition gradually worsened. At the moment, no correlation has been proven between the dose administered and [the cerebral hemorrhage that hit her](#), then also followed by a heart attack, but the woman's family have been asking for the truth for days.

As most of you are already aware, Steve passed away on Friday, May 14. My heart aches, and there is a hole in my life where his physical presence had settled. We met in high school and became the very best of friends. As sometimes happens, we grew apart yet always remained in each other's hearts. Years later we were reunited; and we married in 2016. The love we shared more than made up for our shortened time together.

The morning of Apr 29, Steve experienced a heart attack that led to cardiac arrest. The Naperville Police and Fire Department responded quickly and the EMTs worked to keep Steve breathing until they got him to Edward Hospital. There, the ER staff was able to insert an airway, and get his heart rate somewhat stabilized, after experiencing a dangerously rapid heartbeat. UPDATE: Saturday, May 8. Steve's condition remains critical as doctors continue to battle seizure activity as a result of his heart attack and subsequent cardiac arrest. (from Andi's GoFundMe page)

Wigan dad seeks answers after daughter died following Covid-19 vaccine dose

Vanessa Newton, from Skelmersdale, died in Wigan Infirmary on March 2 at the age of just 45.

Special needs teacher Vanessa had received her first dose of the AstraZeneca vaccine on Valentine's Day and was admitted to hospital on February 25 after she developed severe abdominal cramps.

However, from the Tuesday evening until the Thursday, when she went to A&E, she had abdominal cramps so severe that Mr Jones said she told him they were like labour pains.

She was admitted to hospital for a scan to be done on the Friday and Mr Jones said that returned showing she had blood clots in several organs. He spoke to her over the weekend when she felt a little better but on the Tuesday morning she was booked in for another emergency scan after being in severe pain from around 5.30am. Vanessa died between 11am and noon that day.

56-Year-old Greek Woman Dies Minutes After Second Pfizer Vaccine

By **Patricia Claus** June 18, 2021

The middle-aged woman, who was vaccinated during her 10:00 AM appointment in the morning of Friday at the hospital was pronounced dead just a few minutes after she received her second inoculation with the Pfizer **coronavirus** inoculation.

As is normal procedure, the woman was sitting in a separate area while she was monitored for negative developments that can occur after the vaccine administration.

Just ten minutes after she was vaccinated, she complained of a "burning" pain in her chest and her back, and collapsed.

Doctors on the scene tried to revive the woman, and even to intubate her, but stopped their frantic efforts one hour after she collapsed.

The woman's death is particularly poignant since she and her husband had moved from the capital city of Athens to the village of Kertezi, Kalavrita, in order to feel safer during the pandemic.

Army soldier dies 6 days after receiving Pfizer vaccine

By Yonhap

Published : Jun 14, 2021 - 11:34 Updated : Jun 14, 2021 - 14:09

An Army soldier in his 20s has died six days after receiving his first dose of Pfizer's coronavirus vaccine, officials said Monday.

The soldier, based in Seoul, was found unconscious in his barracks the previous day and transferred to a nearby hospital but died.

It is the second death of a service member following COVID-19 vaccination.

Earlier this month, an Air Force noncommissioned officer in his 40s died after receiving a second dose of the AstraZeneca vaccine.

39-year-old Marilyn Gotay received her Moderna vaccine as a prerequisite to donating her kidney to her husband Amauriz "Mo" Gonzalez, who was in end stage renal disease. Having been deemed healthy enough to donate and being a good match for her husband, Marilyn was required to get the COVID vaccine to move forward with the operation. Now it is possible Marilyn's husband will die without her kidney, and their two children (one is autistic) will be orphaned.

She was an amazing partner, mother, daughter, sister and friend. Marilyn was born on July 6, 1981 to Edward "Bolo" Gotay and Eva Roldan-Gotay. She met the love of her life, partner and best friend Amauriz "Mo" Gonzalez, January 5, 2000 and together they had two beautiful children; Edward (16 and autistic) and Alexia (11). Mo is currently on the NYC waitlist for a Kidney transplant as he suffers from end stage renal disease and is on dialysis and disability.

Marilyn was caring, thoughtful, beautiful and loving. Everyone who met her was touched by her ability to be present and listen, she was a mother first, and she was everyone's best friend and the glue that kept everyone together. Her health was in good standing with no underlining conditions, as she was being actively evaluated to match with Mo as a potential kidney donor.

As the whole world around us has been grieving some kind of loss or tragedy during this difficult year, nothing could have prepared the Gotay family for such a loss at the hands of the newly found COVID VACCINATION. As she prepared to become an organ donor, and getting CLEARED as being a healthy match for a loved one she was informed she must receive the covid vaccine first. April 9th was the day of injection, later that evening little did anyone know she would say her last goodnights to her sisters, the last i love you's to her children as they went to sleep. 4:30am, April 10th, her 11 year old daughter found her face down unresponsive. She was pronounced DOA. An amazing mother, loving sister, aunt and friend she was.

JUN 4 - gets shot

JUN 7 - dead

Jason Fordney
@FordneyEnergy

My good friend and neighbor of 4 years, Walt Chatham of the Placer County Sheriff's office, died suddenly, three days after receiving a COVID-19 vaccination. I was told it was a blood clot. I'm not commenting on the vaccine's safety, but the timing is highly suspect to me.

Placer County Sheriff's Office
June 7

It is with great sadness that we announce the sudden passing of retired Placer County Sheriff's Deputy Walt Chatham. Walt began his career at the sheriff's office in 1976, where he served the Placer County community for nearly a decade. He briefly left the agency, but returned in 1987. During the course of Walt's career, he held various positions within corrections and patrol. Walt was an FTO and a hostage negotiator. His passion for kids also allowed him to serve as a D.A.R.E. officer and S.R.O. When he wasn't assigned to the schools, he worked Marine Patrol (Marine 1). During overtime opportunities, Walt also served as a bailiff in the courts. Walt was a decorated deputy; he was awarded the Gold Medal of Valor in 1992 and the Silver Medal of Valor in 1989. He retired from PCSO in 2007.

JUL 6 - dead

Jordan Hayes

February 23 at 4:51 PM

1st vaccination

I mean this with all of my heart, and it is truly spoken with love. If you don't believe in vaccinations, I genuinely think you are an idiot. Like, legitimately dense. A moron. I hope that every soda you order is flat. I hope that one of your boot-heels has a click and you can't figure out why. I hope that you hit every red light. I hope that when you wake up in the morning and head outside to snag the paper from the lawn, you walk through your front door and into a spider web. But primarily, I hope none of your family or friends suffer from your complete failings as a functional member of society.

Jordan Dale Hayes, age 33, died at Mt. Sinai Hospital in New York City. Less than a week before his death, Jordan went to the ER with chest pains. What was found to be a small heart attack quickly led to two open heart surgeries.

Jordan suffered multiple catastrophic strokes that ultimately proved to be too much for his body to overcome. He passed quickly and painlessly surrounded by those who loved him the most.

Gela, died aged 37 after the AstraZeneca dose. The husband: "I ask for justice"

by Giusi Spica

Zelia Guzzo with her husband Andrea Nicosia

Zelia Guzzo, teacher and mother of a child, struck down by a thrombosis in March. The prosecutor proposes to close the investigation into the doctors

The teacher had undergone vaccination on 1 March: after the symptoms and hospitalization in intensive care at Sant'Elia in Caltanissetta, her death was declared. A demonstration was organized in front of the Palace of Justice of Gela. The hashtags #voceperZelia and #giustiziaperZelia were launched by her husband Andrea Nicosia, also a teacher, after the request for filing made by the prosecutor of Gela because "there are no criminal correlations". "There can be no Series B deaths," he accuses.

Linda Spampanato ▶ Holly's fundraiser for GRIEF ENCOUNTER to help children with loss

May 9 at 10:10 AM - Facebook Fundraisers

One month ago today Daniel passed away due to having a major stroke which doctors confirmed was caused by the AstraZeneca vaccine. In memory of Daniel, Holly Spampanato work colleagues have decided to start this trust fund for Carter and to help Holly raise him, please donate if you can. Any donation, a little or a lot is greatly appreciated. Whether it's for a day trip out, books for Carter or even a pair of football boots. Please share this post & help raise awareness. Thankyou ❤️

One month ago today, Daniel, aged 32, lost his life. On the morning of Tuesday 6th April, Holly woke to discover Daniel needed an emergency Ambulance. The paramedics took Daniel to Leicester Royal Infirmary, where he was diagnosed as having a major stroke. On Wednesday the 7th, Daniel had deteriorated. He was transferred to Nottingham Queens Medical Centre for life saving surgery. Unfortunately, the operation was not successful. Daniel spent his last days in intensive care surrounded by his loved ones. His life support was switched off on 9th April 2021.

24-year-old girl from Cosenza dies after the vaccine, investigations

BUSINESS Mary News Friday 11th June 2021 10:08 AM 140 REPORT

A 24-year-old girl, Alessia Reda, originally from Mendicino, died the day before yesterday at the Annunziata in Cosenza due to a pulmonary embolism. According to reports from the Southern Daily, the young woman was given the anti-covid vaccine from the pharmaceutical giant “Moderna” towards the middle of May. It is not yet clear whether the magistrates of the Cosenza Public Prosecutor’s Office will open an investigation to investigate the contours of a death that occurred in circumstances that need to be clarified. According to what is learned, the young woman was in “good health” but a few days after vaccination she began to feel ill, unfortunately until her death.

Obituary for Becky Dupre Avrard

Becky Dupre Avrard passed away on Thursday, March 25, 2021 at the age of 68. She was a native of New Orleans, LA and a resident of Metairie, LA.

Becky loved sports. She played basketball and volleyball through her school years and continued playing for the next 25 years. She was the best bowler in the family and enjoyed weekends at the camp, crabbing, skiing and going to the beach. She was an excellent cook and you would never get a bad meal at her house, including her gumbo which was the best around. She was known for her famous sweet tea. She enjoyed volunteering her time at Cleary Playground, for the Rummel Booster Club, and Jamboree's. She worked at Dennis Seafood for over 25 years.

She was a proud mother and Gram who would help anyone in need. Becky was a straight shooter. Those who knew her best, knew where she stood and if you didn't she would let you know. Becky lived a full life, and especially loved traveling with family on vacation and going on girl's trips to New York, Disney and Vegas.

Beloved wife of David Avrard. Loving mother of Corey Avrard and Matthew Avrard (Desiree).

According to Becky's son Matthew Avrad, she was extremely careful during the pandemic and isolated herself. Her family had to remain outside and say hello to her from a distance. She took the J&J shot on March 4 believing she could then get back to normal. Becky began gasping for breath three days before she passed.

Brenna Ward
June 30 at 8:03 PM

My father (Bruce David Ward 1956-2021) passed away on June 22nd at the age of 65, a month after his first Moderna Vaccine.

My father, a very healthy and active man spent a beautiful weekend with his wife. Sunday they spent all day playing tennis and enjoying themselves. He had no history of health issues, no history of any heart issues.

The following day he started on his home renovations with no issue. That afternoon he stopped mid reno and ran outside screaming in pain. His wife called ambulance where he was brought to the U of A. They made him wait for hours upon hours. Giving him more and more pain meds untill early the next morning, he passed away during an ultrasound.

Apparently my father had tear in his aortic valve, wich I know now is how these spike proteins (from the vaccines) attach to our bodies. We are still awaiting blood and toxicology reports. (His wife had to pay for these to be done with a cost still unknown to us) They refused to do another autopsy as the cause of death had been determined.

I have my fathers health records prior to his vaccine. He is the type of man that could outrun any 30 year old and would tell you that proudly. The only other symptoms noticed were redness in his face. No pain in his chest at all

41 weeks today and I'm officially fully vaccinated with the Pfizer vaccine! Clearly [redacted] wanted to be born to a fully vaccinated mama! 🍀👶

I am scheduled to be induced on Wednesday evening if he hasn't arrived by then!

It's crazy. This time last year we were exactly 2 weeks away from beginning our journey with IVF. Now our precious babe is about to make his entrance into the world. It is not lost on me how incredibly lucky we are that the process moved so quickly and smoothly for us. A lot of couples don't have the pleasure of that same outcome.

Motherhood is going to amazing and I'm 100% sure it's going to be more different than I can even imagine. We're as ready as we can be, though!

Monday 2.22.21

Megan B [redacted] asked a question ? in [redacted]
9 mins · 👤

Not sure if this is allowed... I don't have the energy to read the rules as I'm currently 12 hours into induced labor with my precious baby who is no longer living.

My dream of becoming a mother came true 9 months ago after 2 years battling infertility and a successful go with IVF. And it was ripped away from me in the blink of an eye at 9am this morning.

Part of that dream into motherhood was breastfeeding. And so I'm reaching out to find out if any other mamas have experienced a loss of this magnitude and then gone on to pump for the purpose of donating their milk?

Vaccino Astrazeneca, Fdl to the Minister of Health: "Evaluate the suspension"

Two deaths occurred in the Catania area after the administration of the anti Covid serum: the Meloni party has announced a parliamentary question. A member of the navy and a policeman on duty in Catania died a few days later: the prosecutor is investigating

Following the death of Stefano Paternò, a Navy soldier, originally from Misterbianco and of Davide Villa, a policeman on duty in Catania, the deputy Edmondo Cirielli of Fratelli d'Italia intervened, announcing a parliamentary question on the Astrazeneca vaccine. Both Paternò and Villa had in fact received the first dose of the anti Covid serum and there are investigations by the prosecutor in progress.

"I will present a parliamentary question to the Minister of Health Roberto Speranza on the possible danger of the Astrazeneca vaccine, whose administration has been suspended as a precaution in Austria, Estonia, Lithuania, Luxembourg and Latvia and today also in Denmark - says the Fdl parliamentarian. - The situation is also very worrying in Italy, given that two members of the Sicilian law enforcement agencies died suddenly after receiving the very first dose of this vaccine in recent days. Therefore, I will urgently ask Minister Speranza on the basis which guarantees the Government has entrusted to AstraZeneca for the supply of vaccines and what actions it intends to take to protect the health of Italians".

CATANIA TODAY

Davide Villa, Catania policeman, died shortly after taking the Covid vaccine

Meanwhile, the autopsy of the military Stefano Paternò, who died of cardiocirculatory arrest in the hands of the resuscitators of 118 twenty-four hours after inoculation of the vaccine, was scheduled for tomorrow afternoon at the Cannizzaro hospital in Catania. The investigation is based on the Astrazeneca

Uttar Pradesh: Woman dies after taking COVID vaccine, kin create fuss at Ballia government hospital

BALLIA (UTTAR PRADESH): Family members of a woman created a ruckus at a government hospital here as she died after being administered an injection by a doctor, according to police. Pushpa (45) of Bahadurpur village was taken to a Garhwar hospital following pain in her chest and a doctor administered an injection while referring her to the district hospital.

Citing the family members, police said froth came out of the woman's mouth and nostrils after she was given the injection. Her family members created a ruckus in the hospital following her death. They were placated by police and the body was sent for a post-mortem.

"It is with a heavy heart that we announce the unexpected passing of Blanche Mamo" Ibragg Parish church said on Sunday. And of course, it was unexpected. Blanche Mamo, 67, was perfectly healthy up until last week.

Her husband, Albert Mamo is in shock. He's just lost his wife, a much loved figure in the community who taught catechism to generations of young people. Until her retirement 8 years ago she was a dedicated teacher at the Paola government junior school. Later she took up a part time role as teacher at San Anton School.

Albert recounts the story, speaking to SideStreet about the events leading up to her death:

13th March

On the day he and his wife were vaccinated, Albert felt fine except for a sore arm. His wife, on the other hand, immediately started to report feeling exhausted and feverish.

19th March

Blanche Mamo is feeling feverish again, this time for three consecutive days. Suspecting she may have contracted COVID, she took a PCR test and the result was negative.

27th March

Ms. Mamo was still feeling unwell and now her speech had become incoherent. The following day, she woke up late and could not eat or drink. Albert asked one of his daughters to call her mother and speak to her. His daughters confirmed that their mother was not herself. She was clearly suffering from something that made her unable to speak and communicate properly.

28th March

Albert asks his wife to join him to church so that they could pray. She stood up, put on her mask and proceeded to the door in her underwear. Panicked, Albert called a doctor who advised him to take her to the Hospital Emergency. She was immediately diagnosed with a blood clot in her brain.

The next day

Blanche Mamo lies in a hospital bed. She is receiving blood platelet transfusions is largely unresponsive.

Easter Sunday

On Easter Sunday at about 00.30 hrs Albert was informed that her condition had become critical, he rushed to hospital to find her taking her last breath. She passed away at 01:50hrs.

Don Bosco teacher of Palermo died of thrombosis: she had the AstraZeneca vaccine 10 days ago

March 28, 2021

The 46-year-old teacher, Cinzia Pennino, hospitalized last Friday in the intensive care unit of the Palermo Polyclinic, died. The woman died as a result of complications from a thrombosis.

The teacher had received the AstraZeneca anti-Covid vaccine a week before admission. Then the situation degenerated in a few days.

The Policlinico di Palermo reported the 46-year-old's death to the judiciary and AIFA. "The patient arrived at the Paolo Giaccone Polyclinic in Palermo on March 24 in very critical conditions with extensive deep thrombosis and an anamnestic history in which there is also a vaccine administration. - says the hospital in a note - Transferred to the Intensive Care Unit in dysfunction multiorgan despite the advanced treatments and care provided by health workers, she died this morning. As expected in this circumstance - he concludes - the case was reported to AIFA and the judicial authorities".

Koronavirus: Investigation into the causes of death of a 65-year-old woman in Ilion - She was vaccinated half an hour ago

Investigation into the causes of death of a 65-year-old woman with underlying diseases who was found dead about half an hour after she was vaccinated in Ilion.

The unfortunate woman had gone to the health center in Ilion to get the AstraZeneca vaccine, the first dose. According to information, the 65-year-old suffered from diabetes. He did the dose, reported no history of allergies or other conditions, and remained in the center for 20 minutes after vaccination.

Half an hour after her vaccination, she was found unconscious in a park next to the health center. She was taken to the health center for first aid, but despite the efforts of doctors, the woman did not return.

19 health workers dead after COVID-19 vaccination; health experts demand investigation

The COVID-19 vaccination drive was kicked off on January 16 in India. Since then, at least 19 health workers have died post-vaccination. Doctors and public health experts write to the health ministry, demanding an investigation into the deaths.

On February 1, 47-year-old Mannu Pahan, a health worker from Ranchi in Jharkhand, died within 48 hours after being vaccinated against COVID-19. He died at the Medanta Hospital and his body has been sent for a post mortem.

Pahan is one of the 19 health workers in the country to lose his life after receiving the COVID-19 vaccination since the launch of COVID-19 immunisation drive on January 16.

While the government has denied any connection between the deaths and the vaccine, the country's public health officials, wrote to the Union ministry of health and family welfare on January 31, raising questions and demanding an immediate investigation into the deaths.

The letter also demanded that the minutes of AEFI committees formed at the national, state and district levels on adverse incidents arising post-vaccination, be made public. The letter drew attention to several facts: the death of health workers has occurred within a few hours to up to five days after taking COVID-19 vaccine; the deceased were aged between 23 and 56 years; media reports highlighted cardiovascular problems or brain trauma as the cause behind each of the deaths;

"So far, most of the cases of COVID-19 vaccine deaths have reportedly been due to cardiovascular and brain trauma. All these groups need to be examined immediately so that, at least, the reasons behind it are known," Amar Jesani, an independent consultant, researcher and teacher in bioethics and public health told *Gaon Connection*. He is also editor of *Indian Journal of Medical Ethics*, and one of the signatories of the letter. Jesani urged that the investigations be made public so that

Mother demands answers after her son, 20, died less than 12 hours after receiving a Pfizer jab

Mr Garrett had muscular dystrophy and had been shielding for around a year so was 'excited' when his turn to get a vaccine meant he could finally 'live his life'.

'He was excited about going to get his Covid jab and being able to get back out into the world and live his life.

'It wasn't even 12 hours after his Covid jab that he died.

'His whole body was in horrendous pain, he had a really high temperature; normally with his condition, his legs can end up in pain but this was different.

'Before he died, the arm he got the injection in was really painful.

Mr Garrett was given the vaccine at Ballochmyle Medical Practice shortly after 3pm on February 8.

By midnight he was unwell. Paramedics rushed to help Mr Garrett, but nothing could be done to save him. He died around 2.30am.

'The post-mortem showed his heart was in a perfect condition. He had never had a seizure before.'

APR 8 - gets shot **APR 9 - clots** → **APR 14 - dead**

Daily Mail

The death of a Weet-Bix factory worker from a blood clotting condition was linked to the AstraZeneca vaccine she got five days earlier, regulators confirmed.

Genee Norris, 48, from the **New South Wales** Central Coast died on April 14 after receiving the embattled coronavirus jab on April 8.

She developed blood clots the next day and four days after she received the jab she was placed on dialysis in an intensive care unit until her death.

The Therapeutic Goods Administration's vaccine safety investigation found Ms Norris' case of thrombosis is likely to be linked to the vaccine.

'Fun loving' mum, 34, dies days after having AstraZeneca vaccine

Damien Lockwood's wife Kimberley suffered a bleed on the brain days after having her coronavirus vaccine

The heartbroken husband of a woman who died days after getting her Covid vaccine has paid tribute to the woman he said was "loved by everyone".

Kimberley Lockwood was just 34 when she died following a "catastrophic brain bleed" 10 days after having her AstraZeneca coronavirus vaccine, her shellshocked husband, Damien, said.

He said: "Kim had the vaccine on March 14 and two days after she obviously had a bad headache, felt a bit coldy and symptoms like that.

When Kimberley arrived at hospital, Damien said that a blood test found that she had a very low blood platelet count and would require a transfusion of vitamin K, which can help to increase a person's platelet count.

But, shockingly, the following day Damien received a phone call to say that he would need to come to the hospital to say goodbye - as Kimberley had suffered a "catastrophic" bleed on the brain and would not survive.

These two men received their Pfizer shots on the same day at the same clinic

MAY 30 - gets shot

MAY 30 - dead

Vaccinated on the same day in the same center in Arona (Novara), they both died within two weeks of each other. Victims were a 50-year-old man, Massimiliano Marcacci, former referee and footballer, and Andrea Pirali, 52.

According to Repubblica, the first dose of Comirnaty serum, produced by the US giant Pfizer, was inoculated on May 30th.

Marcacci fell ill two weeks after the vaccination while Pirali felt ill in the bathroom as soon as he returned home after the inoculation. The coincidence of the place and day of the two vaccinations, however, prompted the prosecutor of Verbania to ask for investigations also on this second death and ordered an autopsy.

OC woman's death after vaccination spurs concern from family

Fri, April 30, 2021, 2:38 AM

- The Orange County Coroner's Office is investigating the death of a woman who passed away several days after getting her second Moderna vaccine. The family says, the mother and grandmother was healthy before she got her shot, and that her sudden death came as a shock. [Video Transcript:](#)

- This Orange County son worries his mom died because of her second Moderna COVID-19 vaccine dose. A conversation with staff at the OC Coroner's Office about Griselda Flores' death raised red flags for Richard Cardenas and his family.

- They made it seem like this was, like, not the first call that they had.

- OC Assistant Chief Deputy Coroner Brad Olsen says, that's right. Olson tells Eyewitness News, a handful of deaths, including Griselda's are under investigation. Because they happened one to three days after the person got a COVID-19 vaccine dose.

- Cardenas says, his mom was a healthy, outgoing, hard working mother and grandmother.

- The day after her second shot on April 14 at a CVS in Orange, Griselda complained of the expected side effects, chills, body aches, and a fever. She looked really pale. She said she was tired, and was going home to sleep.

Two days after her second dose, Griselda's family says, they found her dead in her room.

JAN - gets 2nd shot → **FEB - "stroke-like" symptoms** → **APR 3 - dead**

Manchester Evening News

Rachel McKinney, 35, leaves behind her husband Kevin, stepson and two sons aged 8 and 12, after her tragic death on April 3.

The care home nurse from Stockport began developing symptoms of confusion, and slurred speech in February this year.

She had received both doses of the Pfizer vaccine in December and January and reported classic side effects, her sister Gemma said.

But a month later, her family became increasingly concerned as she displayed signs of a stroke, and Rachel was advised by 111 to attend Stepping Hill Hospital.

Due to Covid restrictions, her family were not allowed to accompany Rachel, and received a text to say she'd had an MRI scan which showed she had inflammation of the brain.

After arriving at Salford Royal Hospital, Rachel started suffering from seizures, and a decision was made to place her into a coma.

15-Year-Old Boy Dies Of Heart Attack Two Days After Taking Pfizer Vaccine, Had No History Of Allergic Reactions

A 15-year-old boy in Colorado died of a heart attack only two day after taking the Pfizer vaccine. He had no history of medical issues.

The case, listed in the database as [VAERS ID 1242573](#), reveals that the 15-year-old boy was “vaccinated with Pfizer/Biontech” on April 18, 2021. He began to experience adverse reactions to the vaccine on April 19, 2021, and “died 4/20/2021, 2 days after vaccination.” The VAERS database also reveals that he had no other illnesses, no preexisting conditions, no known allergies, no birth defects, and no permanent disabilities. He merely died of “cardiac failure” exactly two days after receiving the vaccine.

APR 30 - dead

Lisa Stonehouse's family has said she went to the ER at the Grey Nuns Community Hospital in Edmonton on April 29 with a severe headache after receiving the Oxford-AstraZeneca vaccine about a week earlier.

On Monday, she was taken off life support, 12 days after she got the shot, Lowenberg said.

Stonehouse's death is the third reported in Canada from a blood clot after receiving the AstraZeneca vaccine. A 54-year-old Quebec woman and a New Brunswick resident in their 60s also died.

Lowenberg said Stonehouse thought she had the same symptoms many others were having after being vaccinated, then her health worsened.

MAR 30 - got shot

APR 9 - dead

CHARLOTTE, N.C. (FOX 46 CHARLOTTE)- A local woman says her mother died two days after receiving the Johnson and Johnson vaccine. She believes the dose is what caused her mother’s sudden death.

FOX 46 sat down with Allyson Hendrix, who said her mother was someone who helped other people out a lot and now that she’s gone, Hendrix said she has a huge hole in her life.

Hendrix says her mom decided to get one of the COVID vaccines and settled on the Johnson & Johnson.

“She was like, ‘I’ll just go do that, it’s easier, I don’t have to do that, you know, two trips.’ She got that on March 30.” Then two days later, she was in the hospital.

“They couldn’t figure out what was going on, so they did a CT scan and that’s when they found all the bleeding on the brain,” she said. “It was so massive at first that they thought it was actually two aneurysms, but it was only one. It was just so big.” On April 9, Darlene Blackwell passed away.

“That night that, we decided to we had to end life support. We were sitting at my grandmother’s house and the news was kind of turned down on low but I was reading the headlines and it said Johnson & Johnson vaccine put on hold and it was stopped,” Hendrix said. “It just hit me like what it that happened.”

Two weeks from shot to blood clots

Oregon woman dies after getting J&J vaccine, state health officials say

by KATU Staff Thursday, April 22nd 2021

PORTLAND, Ore. (KATU) - An Oregon woman died this week after she received the Johnson & Johnson coronavirus vaccine, the Oregon Health Authority (OHA) said.

They say she developed a rare but serious blood clot within two weeks of receiving her vaccination.

State health officials said they received information from the Centers for Disease Control and Prevention (CDC) about the death, and that the government agency was investigating.

Until the CDC completes its investigation, officials said they cannot officially say whether her death is related to the vaccine.

The OHA said the woman, who was in her 50s, received the vaccine before the U.S. ordered a ‘pause’ on its use.

Naples teacher dies four days after the vaccine: the complaint is triggered

Of Ivan Marino - March 3, 2021 284 0

It is not a no-vax family, the one that yesterday filed a complaint with the carabinieri. He only asks to understand how **Annamaria Mantile**, 62, Neapolitan from Vomero, elegant English teacher, died. "She felt ill two hours after the injection and never recovered," says her brother Sergio, a sociologist, who puts the facts one after the other.

Saturday 27 February, 12.30 pm. The professor reaches Hall 1 of the Mostra d'Oltremare for the first dose of the drug. Immediately after, he returns home, in via Bernardo Cavallino. It is her apartment as a girl, never left to assist her elderly mother, with her photos and those of her grandmother, in black and white, smiling on the walls in the dining room. Already in the afternoon, Annamaria begins to have nausea, retching, abdominal pain and a sense of exhaustion. Contact your family doctor, who will prescribe a drip to hydrate your body, plus another spasm medicine. "It seems to be improving," Sergio says to the marshal of the barracks in Piazza Medaglie d'Oro. "But my sister faints the next day." The following morning, conditions appear stable. That malaise does not go away. Suddenly, it gets worse.

"Four days after the administration of the AstraZeneca vaccine, my mother says Annamaria is cold," cries her brother, reconstructing the last moments. «I rush home from Castel Volturno, in the meantime a cardiologist practices an electrocardiogram without finding any anomalies. Except for the slightly accelerated heartbeat ». Annamaria is thirsty. She drinks several times, helped by relatives. But nothing is a relief anymore. "He can't hold his head, his eyes are open and his gaze is absent." The doctor returns, gives her a massage to revive her, and a 118 team also intervenes: the ambulance stops under the yellow building. It starts again empty.

Christina, 61, died after covid-19 vaccine.

Family: We demand an apology from Astra Zeneca

Of: **Susanna Nygren** ✉

PUBLISHED: MON 12 APR 2021
UPDATED: TUE 13 APR 2021

NEWS

Christina, 61, died after receiving Astra Zeneca's covid-19 vaccine. Doctors have determined that she was a healthy woman who after vaccination got a fatal coagulation disorder.

Christina's family is now demanding an apology from Astra Zeneca and the Medical Products Agency.

- This must not happen again. Christina must not just be a number in the statistics, says Daniel, one of Christina's sons.

On February 17, 61-year-old assistant nurse Christina was vaccinated with [Astra Zeneca's](#) covid-19 vaccine. She had felt anxious before the vaccination but still decided to take the injection in solidarity with the elderly she took care of at work.

Christina continued to feel unwell. She had a headache for several days - only to feel a little better one day - then the headache returned, now with cold sweats and nausea.

Gets worse for several days

One week after the vaccination, Christina had severe stomach problems. She vomited and had diarrhea. In addition, she suffered from double vision, something she had never had before.

It did not go over.

In the end, Christina only vomited bile and was not allowed to keep any food at all. She called her son Daniel in a panic.

- She said that "you have to drive me to the emergency room".

The next day, the doctors had managed to stabilize Christina's condition by adding two bags of platelets.

- The platelets were raised to a more stable level, Daniel explains.

But early Sunday morning, Christina's condition deteriorated drastically. She had a cardiac arrest and then a brain haemorrhage. Her doctor contacted her husband Thomas and explained that the situation was serious. He hurried to book a plane ticket home.

The doctors in charge explained to the family that they had not been able to determine a 100% cause of death, but that they had not been able to see any other probable cause than the vaccine.

The hypothesis is that the vaccine has caused a so-called disseminated intravascular coagulation, a condition in which the blood begins to coagulate too much and many blood clots form simultaneously in several places in the body. In the final stage, massive internal bleeding occurs.

The hospital reported the death to the Medical Products Agency as a suspected serious side effect of the vaccine. After the autopsy, it was established that Christina was a previously healthy woman without underlying diseases.

After the vaccination, she had suffered from six different life-threatening conditions, which occurred more or less in parallel with each other:

- Massive cerebral hemorrhage
- Myocardial infarction
- Plugs in the left lung
- Bleeding in and around the adrenal gland
- Heavy bleeding in the intestinal system
- Plugs in the venous system

Woman Dies 40 Minutes After Receiving Sinovac COVID-19 Vaccine

Shortly after receiving a dose of the vaccine made by Chinese company Sinovac at a vaccination center in Metepec last Thursday, the woman started feeling weak and fainted when she got up to go to the washroom. She was rushed to the IMSS clinic in Metepec shortly after fainting but was declared dead on arrival.

Several newspapers in Mexico, including Milenio and Sin Embargo, reported at the time that she died 15 minutes after getting vaccinated. The federal Health Ministry, however, indicated that the 75-year-old passed away 40 minutes after inoculation, according to the latest reports.

Update on my Dad: text message copied from my sister who is in the hospital with him. She is a nurse herself, so she is the best advocate for him and can explain things in detail to us.

"Good morning. If you haven't heard yet a CT scan was done last night and showed dad had a stroke. They think possibly 2-3 days ago. He did not present with any symptoms prior intubation that the nurses are aware of. They have considered the cdc protocol for vaccine reaction and switched his heparin to lovenox (a different blood thinner). Dads Doctor verified with U of M doctors before starting. The doctor filed a report to the cdc but will need to update it with stroke information. (The CDC has received more reports of stroke following vaccine)

Obituary for Brenda Lee Pettitt

June 27, 1959 - May 7, 2021
Charlestown, Maryland | Age 61

Brenda "Brady" Lee (Scarborough) Pettitt, 61 of Charlestown, MD passed away at her home on Friday, May 7th, 2021.

Brenda was born in Elkton, MD on June 27, 1959 to the most wonderful and loving parents; George and Louise Scarborough of North East, MD.

For 25 years, Brenda was a devoted wife to the love of her life, Robert Pettitt of Charlestown, MD. She was the loving mother to Amie Rapoza of North East, MD, Chad Rapoza and his wife Monica of North East, MD, Kelly Rapoza of Waynesboro, PA and "Cat-Mom" to her beloved kitties K.K., Spooky, and Sheba. She was the "Nana" who gave the best hugs to 8 grandchildren: Autumn, Aubrey, Avery, Kaden, Brendan, Carson, Madison, and Savannah whom she loved dearly and spoiled in every way imaginable. Brady was blessed with 3

Chad Rapoza is with Angela Reeves Hamilton and 10 others.

May 14 · 🌐

I didn't want this issue to interfere with the celebration for my Mother but the lack of communication from the Office of the Chief Medical Examiner for the State of Maryland and elected representatives at the State and County level is appalling. As you may know, exactly one week ago today, my Mother, Brenda Pettitt died unexpectedly at home. She died less than 24-hours after receiving the 2nd dose of the Moderna vaccination for COVID-19. Upon review of her medical history, the Office of the Chief Medical Examiner for the State of Maryland declared that my mother had died from "Natural Causes" and thus an autopsy was not required. Her death certificate was then presented to her Primary Care Physician (PCP) for review and signature. Upon review, the PCP adamantly disagreed with the Chief Medical Examiner's decision as they concluded that my Mother's medical history should have not caused sudden and unexpected death. Right now, there is a stalemate and my Mother's remains are currently sitting in limbo. The State of Maryland is refusing to acknowledge a link between her death and the vaccine.

DMX Received Covid Vaccine Days Before Heart Attack – Family Says NO DRUGS

12 hours ago Last Updated: April 8, 2021

Rap legend DMX, real name Earl Simmons, is currently in the ICU after suffering from a massive heart attack. Early reports speculated that DMX's condition may have been brought about because of an alleged drug overdose.

But MTO News spoke with a member of the Simmons family who believes that it was NOT drugs that caused the heart attack.

In an EXCLUSIVE interview, MTO News spoke with DMX' family member who told us that the rapper received the COVID vaccine about a week before he suffered from the heart attack.

DMX's family member told MTO News, "[DMX] got the vaccine when they opened it up to people over 50. He got it so that he could go travel and perform, stuff like that."

And the family member suspects that DMX heart attack could have been a reaction to the vaccine. The family member explained, "Everyone [in the news] keeps saying that [DMX] had a drug overdose. How do they know. I'm in the family and no doctor told me anything about an overdose."

The family member is FURIOUS about the speculation surrounding DMX drug use. She told MTO News, "Yes he had past issues with drugs. But nobody know: that he had an OD, It's f**cked up that its being reported like that."

The grieving kin explained, "He took that vaccine, and he had a heart attack.

Italy Opens Manslaughter Probe as Teacher Dies Hours After Getting AstraZeneca Vaccine

BY JACK PHILLIPS | March 16, 2021 Updated: March 16, 2021

Italian officials have begun a manslaughter investigation following the death of a 57-year-old music teacher hours after receiving AstraZeneca's COVID-19 vaccine, according to local media reports.

Officials have so far said there is no evidence of a direct link between the man's death and his shot.

Prosecutors in the northern Italian region of Piedmont announced they opened a manslaughter probe into the death of Sandro Tognatti, who received the vaccine in his hometown of Biella on March 13. His wife told news outlets that he went to bed that night with a high fever. The next day, she said, an ambulance was called for him, and he later died.

The local prosecutor in Biella, where Tognatti lived, [announced](#) the opening of a criminal case for manslaughter after his death, [Italy's La Repubblica newspaper](#) reported.

Tognatti's death came just days after a 60-year-old Danish woman suffered highly "[unusual symptoms](#)" and died after receiving the vaccine, the Danish Medicines Agency said this week. The woman had a low number of blood platelets and clots in small and large vessels, as well as bleeding, it said, reported Reuters.

"It was an unusual course of illness around the death that made the Danish Medicines Agency react," it said in a statement late on March 14.

Norway said on March 13 that three people, all under the age of 50, who had received the AstraZeneca vaccine were being treated in hospital for bleeding, blood clots, and a low count of blood platelets, which were labeled "[unusual symptoms](#)" by health authorities.

Andhra Pradesh ASHA Worker Dies After Receiving Covid-19 Jab; Unions Protest

Promila Devi, 55, a frontline health worker died due to serious complications she developed after getting vaccinated for Covid-19 at Hamirpur district in Himachal Pradesh.

Confirming about the death, Dr Janak Raj, Senior Medical Superintendent, Indira Gandhi Medical College, Shimla said the patient was shifted to IGMC from Dr Rajendra Prasad Medical College, Tanda (Kangra) only a few hours before she died.

After initial treatment and reviewing her condition, she was rushed to Tanda, where he was treated for her kidney failure. She was tested for Covid-19 also she was negative. She was also on ventilator support. As condition became precarious on Saturday, she was brought to IGMC Shimla," he said.

Chief Medical Officer (Hamirpur) Dr Archana Soni said the death of the Anganwadi worker after vaccination is a matter of concern. The higher authorities in the government have been appraised of the circumstance.

Dr Janak Raj released a letter written by union Additional Secretary (Health) Manohar Agnani asking the state governments to take strict measures after any death following vaccination of the frontline workers in the country.

ASHA workers staged a demonstration in front of the GGH demanding that a compensation of Rs 50 lakh be paid to the deceased's family.

Moradabad: Ward Boy Dies 30 Hours After Taking Covishield, ACMO Denies Vaccine Caused Death

46-year-old Mahipal Singh, a ward boy at the Moradabad district hospital died about 30 hours after he received the Covishield vaccine. While his family members have alleged that he fell sick only after receiving the vaccine, Additional CMO of Moradabad district, Dr Dinesh Kumar Premi, while speaking to Outlook, said that Singh died due to a heart attack and that his death has nothing to do with the vaccine.

Which vaccine was he administered and when?

He was administered Covishield on January 16 at 1 PM at the District Main Hospital. He was kept in the hospital for observation for some time as we did with all the other vaccinated individuals. He didn't show any symptom of any side effect. At the time of his release from the hospital, he was completely fine and he had neither any fever nor any rashes or anything

Then in the evening, he developed chest pain again and faced breathing issues. His family rushed him to the district hospital. He was admitted in the emergency ward and the doctors found him dead. He died on the way to the hospital.

Anganwadi Worker Dies After Covid-19 Vaccination, Govt Orders Probe

The 44-year old ASHA worker complained of severe headache and fever on January 22, three days after she took a shot of the coronavirus vaccine.

"We first took her to a private hospital and later shifted to the GGH as her condition worsened. She was a very fit person and rendered tireless service during Covid-19 time," the ASHA worker's brother said.

EFFINGHAM, Kan. (KSNT) – An obituary posted online Wednesday night states that a Kansas woman died after a reaction to the coronavirus vaccine, according to KSNT News.

The first line of Jeanie Evans' obituary states, "Jeanie M. Evans, 68, of Effingham, Kansas died unexpectedly on Wednesday, March 24, 2021, at the Stormont-Vail Hospital from a reaction to the Covid vaccine."

Evans received her shot the day before her death in Ozawkie at the Keystone Early Learning Center.

Once she started experiencing a reaction to the vaccine, Evans was taken by ambulance to Topeka's Stormont Vail Hospital.

Evans was pronounced dead at the hospital, a day after receiving her first COVID-19 shot.

The Kansas Department of Health and Environment confirmed it is investigating the death alongside federal partners.

As a college professor who worked in person with her students at Appalachian State University and spent lots of time caring for her two grandchildren, 63-year-old Virginia Ellington was counting the days until she could be vaccinated against

Ingle said her mother and father got the Johnson & Johnson vaccine on the morning of Monday, March 8, at the Watauga Health Center in Boone.

Ellington started feeling very tired and even asked her husband about possible vaccine side effects, Ingle told WRAL News.

Ellington went to work the next day but was still feeling unwell, according to her family. On Wednesday, March 10, she stayed in bed. A little while later, her husband returned to the bedroom to find her unresponsive.

"He tried giving her CPR, and he called 911, and they said she was gone when they got there," Ingle said.

✔ Francesca died at 32 ten days after the dose:

Please note that Google Translate often converts pronouns ("she" to "he")

Genoa – Carmelo Tuscano he opens the door and spreads his arms: «We do not want to accuse anything or anyone, we have no elements to do so. Simply, we would like to understand why our daughter died. He was fine, he hadn't had any health problems lately and not even before, he was happy to get the vaccine. It would be enough for the exams to clarify what happened: of course, a woman of just over thirty years who does not have illnesses or other obvious problems is not that she constantly undergoes

Monday, March 22, the injection, and it seemed everything was ok. «I accompanied her – Carmelo still remembers – and when we returned home she was calm. She just told me she felt a little tired, but from the next morning she never mentioned it again. ^ The rest of the sequence is the one that from today the magistrates will reconstruct in detail: on Friday evening the onset of much more serious illness, on Saturday the loss of consciousness, transfer to the San Martino emergency room and hospitalization in intensive care: on Sunday morning the death and certification of the symptoms of thrombosis and cerebral hemorrhage.

Healthy 36-year-old surgeon dies from Multi Symptom Inflammatory Response weeks after taking 2nd shot

Doctors suspect COVID delayed immune response in young surgeon's death

By [Jane Roberts](#), Daily Memphian

Updated: February 12, 2021 6:43 AM CT | Published: February 10, 2021 6:27 PM CT

A young orthopedic surgeon with OrthoSouth who died early Monday, Feb. 8, may be the nation's first case of an adult who died of a delayed immune response to COVID and had received the vaccine.

Dr. J. Barton Williams died early Monday at Baptist Memorial Hospital-Memphis. He was 36.

"What we think so far is that he suffered from multi-system inflammatory syndrome (MIS)," said Baptist infectious disease expert Dr. Stephen Threlkeld.

The syndrome, more common in children, often looks and acts like Kawasaki disease, which causes inflammation in the blood vessels.

MIS is a reaction in someone who has had the COVID infection weeks or months earlier and mounted a severe, delayed immune reaction, which often causes significant damage to the organs.

Williams told doctors he was not aware of having had COVID and he tested negative several times in the hospital, which is not unusual, Threlkeld said, because he could have had COVID long enough ago that he would no longer test positive.

MIS is essentially an unchecked immunological response to the virus, said Dr. Scott Strome, executive dean of the College of Medicine at University of Tennessee Health Science Center.

Dr. J. Barton Williams

Dr. J Barton Williams, called a student of medicine and science, went from doctor to patient when he fell ill weeks ago. Dr. Stephen Threlkeld helped treat him at Baptist Hospital.

Threlkeld says the disease quickly went from diagnosis to death.

"It was matter of days," Threlkeld said. "Just a tragedy."

Threlkeld says Williams tested positive for COVID antibodies, meaning he had COVID at one time, but he never knew it. And he had gotten his second COVID vaccine just weeks before his death.

Alpa, age 35, unexpectedly passed away on Saturday 24th April due to the side effects caused by the Oxford-AstraZeneca Vaccine.

Our beautiful Alpa, age 35, unexpectedly passed away on Saturday 24th April due to the side effects caused by the Oxford-AstraZeneca Vaccine.

Alpa was invited to have the Oxford-AstraZeneca Vaccine.

After approximately 10 days after having the vaccine, she was rushed into hospital of a suspected stroke.

It was found that Alpa had suffered a blood clot in the brain and within days the number of blood clots increased.

After lifesaving brain surgery and various treatments, Alpa started to recover in hospital and was responding. However, after just 2 short weeks into her recovery Alpa suffered from a large bleed in the brain which resulted in the devastating news that she had passed away.

Alpa leaves behind a loving husband and two beautiful young children. A daughter aged 5 years old and a son just 1 years old.

Kerala dental student dies after receiving vaccine jab

Published: 26th February 2021

Complaint filed as student dies after taking vaccine

The death of a BDS student after getting vaccinated has led her family to file a complaint at the local police station in Kozhikode district. The family has alleged that the negligence of the Pariyaram Medical College authorities led to the death of Mitha Mohan (24), a final year BDS student.

She had received the vaccine at the Pariyaram Medical College and began experiencing headache and vomiting thereafter. Her test results later showed that she was Covid positive, according to Manorama Online. She was admitted to the isolation ward of the teaching hospital, but the hospital authorities couldn't save her life.

It was earlier in 2021 that 24-year-old Mitha Mohan, along with her batchmates took the first shot of Covishield, the **COVID-19** vaccine developed by the University of Oxford and produced by pharma giant AstraZeneca. The second shot was due in a few days for her, a Bachelor of Dental Surgery student of Government Medical College, Kannur and her batchmates. However, her classmates remember how Mitha developed rashes, allergies and vomiting, following which she was subjected to an RT PCR test and her result turned out to be positive. Two days ago, Mitha succumbed to the virus.

The protest which is being organised by the students' union chairman Vinayak Vijay has entered its third day. The students say that they will continue the protest until the college comes out with a statement. "The second shot of our vaccine is due in a few days. We do not know if the vaccine caused her death, but had the treatment been better, Mitha would have still been alive," says Sreelakshmi. Earlier, a health worker who received the vaccine jab had also died in Telangana.

Jaipur: A 60-year-old man died on Thursday morning, 20 hours after getting vaccination for Covid-19 in Kota.

The deceased, Bahadur Singh was a farmer hailing from Gar-modi village in Kota district, 150 km south of Jaipur.

Singh had got the first dose of the vaccination at the Primary Health Centre in Baluheda at around 1 pm on Wednesday. He was monitored for half an hour at the health centre after which he went home.

Singh's brother Govind said that after getting the vaccine, Bahadur felt dizzy on Wednesday evening and went to sleep. When he woke up on Thursday morning, he again complained of dizziness. He had some tea but soon after he fainted and then died.

His family took him to the Community Health Centre in Kait-hoon where doctors declared him dead.

Govind claimed that Bahadur's condition deteriorated and he died after getting the vaccine. Govind said his brother was fit and did not have any illness.

Michela Foderini's last act of great love and generosity: the choice to donate organs

04.03.21 21:28 by Editorial Perugia24.net
Source: Antonello Menconi

We will not forget it. It will always be in our hearts. Michela Foderini (at this [LINK](#) other article) left us in recent days for a sudden cardiac arrest, but his organs will continue to live. To reveal it publicly, in order to make known this act of great love, is her husband Mirko Cannoni. I think there is nothing else to add ... Honorable having donated your organs, good Michela, you have always been until the end. Unfortunately, a short but intense life with your head held high is better than a "long and sheepish" life. An example! Pride! Hi Lilla ... "

MAR 9 - gets shot

MAR 9 - dead

Stefano Paternò, 44-year-old Petty Officer from Italy, died 16 hours after receiving AstraZeneca shot from thrombosis (brain bleed).

lasiciliaweb

Mom why did dad die?"

CATANIA - " My son asked me: ' mom why did dad die? ' And I have to give him an answer ". So Caterina Arena, wife of Petty Officer Stefano Paternò, who died last Tuesday, sixteen hours after receiving the first dose of AstraZeneca vaccine, explains the reasons why she presented an exposition after the sudden death of spouse. " My husband was a humble person, loved by all, always available to everyone and never wanted anything in return. He was generous, yummy. He vaccinated himself and said that the only solution to get out of this pandemic was precisely the vaccine so he recommended it to everyone - continues Caterina Arena, mom of two 11 and 14 year olds -. For example, to mine - year-old mother said: 'Next turn is yours, please get vaccinated' ".

Initially the vaccine dose caused Paternò only a temperature rise, contrasted with Tylenol. " He was fine, he even recovered after a bit of fever. And then at night I wake up because he starts shaking, he had his eyes open and the look was in the blank and I immediately realized that the situation was serious. Called my brother 118 and we started CPR. Then the doctors arrived, after 45 minutes, and they declared the death ". Catherine Arena tried to react, to give herself answers: " For my children, for me, for everyone, because it can help the whole community ".

" Consultants recommend a more critical attitude to deepen the findings and to be able to judge at least after the Histological Examination. But we'll have to wait for twenty days explains Advocate Dario Seminara. The attorney has appointed five experts who participated in the autopsy arranged by pm Gaetano Bono, who directs the investigation coordinated by Chief Prosecutor Sabrina Gambino. This is Angelo Indelicato, Giancarlo Guerrera, Lucio Di Mauro, captain Francesco Oristanio, and Dario Condorelli. The family has always supported a correlation between vaccine administration and Paternò's death. And the news of the momentary withdrawal of the vaccine in Italy doesn't surprise us.

" It was a duty to caution the community while awaiting the resolution of the questions put by the prosecutor: it's only right that it should be done so that we can see if other than the temporal nexus that is evidently there because this is a case where death occurs at a distance of distance Just 16 hours of vaccine administration, we need to see if there is actually an etiological link between the vaccine and the death - this is exactly the answer that will give us the autopsy. We've certainly made many assumptions, but I can't say them now because it's right to check them in the light of the history examinations ".

The Prosecutor of Messina, investigating the death of Davide Villa, Catania's Crime Police officer who died on March 7, 12 days after the administration of the AstraZeneca vaccine, will acquire the historical findings already used for the first investigations started by pm of the ethnea city, which then forwarded the dossier to colleagues in the City of the Strait.

Wrexham: Tributes to Kelly Dunley after tragic sudden death

By Joe Robinson | [@joerob_leader](#)

Kelly Dunley, 38, died at the Royal Stoke Hospital on Monday (May 17) and will be sadly missed by all who knew her.

On Monday, Kelly collapsed and had a fit at home in Stoke and was rushed to hospital. While having a CT scan, Kelly had another fit and sadly, despite all care and efforts, she could not be saved and was pronounced dead a short time later.

Kelly, who is said to have had a history of blood clots, had suffered one in her leg after receiving the AstraZeneca Covid vaccine, and medical practitioners suspect she suffered another one on her lung.

Daughter says 75-year-old mother died after first COVID shot at medical center in Oregon

by Ambar Rodriguez, KTVL | Monday, May 24th 2021

KLAMATH FALLS, Ore. (KTVL) - The daughter of a Klamath Falls resident said her 75-year-old mother died less than 72 hours after receiving her first dose of the COVID-19 Moderna vaccine.

Carrie Creswell said her mother, Darlene Bartholomew was given her first dose on April 23 at Sky Lakes Medical Center. By Monday, April 26 her mother was found dead inside her home.

"She called me all excited that she was going to get her shot, she said she was going to an estate sale, out to lunch, and at 12:30 pm I am going to get my Moderna shot," Creswell said.

She said 45 minutes after Bartholomew received her first dose, her caretaker called Creswell to let her know her mother was not feeling well.

"The caretaker said she has chills everywhere, she's throwing up, she got her shot and she was fine before all of this," Creswell said.

Creswell said on Monday morning, April 26 while she was on her way to Oregon, she could not get ahold of her mother. She said she got ahold of the caretaker and asked her to check on Bartholomew.

"Everybody does video camera now, so the camera was on, I watched her go up the back stairs of my mom's house, go through the kitchen, in through the living room, when she turned the corner to go into my mother's room, all I saw was my mother's lips were white and she was gone," Creswell said.

9 News Adelaide

May 21 at 4:36 AM

The family of a much loved northern suburbs father and grandfather is tonight rushing to be by his bedside before his life support is switched off.

But they say his situation might have been far different if medical staff had responded to their concerns he may have developed blood clots from the AstraZeneca vaccine.

Lexi Logan is in Royal Adelaide Hospital.

May 20 at 4:15 AM

any sleep. It then took 3 hours to transfer my Dadd who had a stroke in a hospital, untreated to the Royal Adelaide Hospital. He suffered major damage to his brain all the while still bleeding into what he sarcastically referred to the day before being his rose bag. They performed an operation to clear the blood clots in his brain which was unsuccessful. Information and communication or lack of from participating hospitals only added to the lack of fastness or even knowledge of what to do for him added to the undue care that had been administered. Told once again to a nurse that he had the covid vaccine to which I got a shoulder shrug reply. (I have this on video) Then began a long and torcherous day and night of insurmountable pain, agitation and what I can only describe as a hell of a fight to live and breathe. He was moved to the ICU in the early hours of Monday morning.

AstraZeneca vaccine: 'Doctors had inkling it was the Covid jab', say family of blood clot victim, 51

EXCLUSIVE

inews.co.uk / April 15, 2021

Like so many others, Michelle Barlow was delighted to get her coronavirus vaccine. The mother-of-two and her husband, Ian, booked their appointments as soon as they got the call, knowing it was the right thing to do.

But their relief at finally being given the vaccination turned to concern when Michelle fell ill in the days after having the AstraZeneca (AZ) jab on 7 March.

Ms Barlow, 51, had flu-like symptoms in the first couple of days after her jab, which is a common side effect. But a week later she developed severe headaches, diarrhoea and sickness for which her GP gave her medication.

She got "progressively worse and worse" and – as reports started to emerge from around Europe of extremely rare side effects from the jab – she was admitted to hospital on 20 March.

She was pronounced dead three days after being admitted to hospital, and is one of at least 19 people who have died from unusual clots soon after having the vaccine.

The civil servant, who had no underlying health conditions, was found to have low blood platelets and two clots on her lungs.

Recalling the moment his wife was admitted to the Royal Albert Edward Infirmary, also known as Wigan Infirmary, Mr Barlow, 56, from Wigan, said: "It was a shock because Michelle was fit and healthy."

"She was active and always walking the dog. She told me that the doctors had said they had an inkling it could well be the vaccine."

According to her death certificate, the cause of her death was pulmonary embolisms and blood clots in her abdomen and portal vein. A coroner ruled she died from natural causes, which her family have asked to be reconsidered after more information about the vaccine's risks have emerged.

AstraZeneca vaccine: Family of man who died of blood clot after Covid jab

Dr Alison Astles, the sister of Neil Astles, 59, who died in hospital on Easter Sunday from a receiving his first AstraZeneca jab dose on 17 March (Photo: PA Wire/BBC News)

inews.co.uk / April 8, 2021

Neil Astles, 59, received his first jab on 17 March but died in the Royal Liverpool University Hospital on Easter Sunday after suffering 10 days of 'worsening headaches' and a loss of vision, *The Daily Telegraph* reports.

Mr Astles, a married solicitor at Warrington Borough Council, is the first named person in the UK suspected to have died due to side effects from the vaccine.

She told *BBC News* clinicians told her they were 99.9 per cent sure the clot was due to the vaccine and that her brother was extremely unlucky.

She said: "The human being, the sister in me, still feels absolutely furious and very angry that this has happened to my brother."

VACCINE AWARENESS & SEARCH TO FIND OUT ABOUT MY MOM
**sensitive to read but important
** I'm hoping to spread awareness on possible complications

originally I was going to post my excitement on my second vaccine. Don't get me wrong I took the risk because I was anxious about it covid. I also wanted to see my mom & didn't want to risk giving her covid. I didn't know that the vaccine is actually very risky for people with underlying conditions. my mom passed away on Friday... 1 week after getting her first Moderna vaccine. Her symptoms started the night she got her vaccine (seems to be exactly the same timing the rest of us start getting symptoms). She was a diabetic, had heart disease & kidney disease but all managed and not showing signs of sickness there. NIGHT one her blood sugar dropped and she passed out. We googled and it looked like in rare cases the vaccine could effect blood sugar of diabetics. Her dr told her to just change her insulin until symptoms subsided. Then her blood sugar was high for 2 days (Then it balanced). THEN she was very nauseous and throwing up for 2 days (then that stopped) THEN she had shortness of breath for 2 days. Nothing to call the ER. She thought it was vaccine symptoms that would go away. She passed Friday peacefully.

The Red Cross of Voghera is in mourning for the disappearance of a volunteer and employee who spent a lifetime in the service of the Via Carlo Emanuele Committee and the weakest people: Massimiliano Michelin was struck down by a heart attack at the age of 50, while he was having breakfast in his home in Voghera: his mother immediately called for help and his colleagues and friends of a lifetime in the Red Cross and self-medicated intervened. For them it was a terrible blow: he, who until yesterday helped and saved hundreds of lives with the same Red Cross uniform worn for 30 years, is now gone. "I have no words for the deep sadness with which I have to communicate the death of our colleague Massimiliano Michelin, the friend Miki with whom we have shared so many experiences. We are all astonished in the face of this sudden death, Massimiliano was a really good person and a colleague and friend of everyone, here in CRI, for us it is a serious loss ", comments the President of the Voghera Committee Chiara Fantin. Massimiliano had already given so much to his life, in full pandemic a few months ago he had also lost his father Cesare. An entire city today clings to the pain of its mother, brother, but also to other relatives, friends, all

A TRAGIC dad-of-four died of Covid after getting the first dose of the Pfizer jab just two days before he was diagnosed.

Chris Moore, 48, had been shielding during the pandemic but returned to his job as an NHS administrator at the end of last year.

He was given the first dose of the vaccine on January 2 but began to show Covid symptoms two days later.

Chris, from County Durham, was diagnosed with the virus and taken to hospital with breathing difficulties but sadly died four weeks later.

David said: "Again, he made a little bit of a recovery after seeing Helen but she was told he needed kidney dialysis as well but he didn't really get any better after that.

"They were called again and they were told he was seriously poorly and Helen had to go and be with him. He passed away then.

"Even though Chris hadn't gone out the only days Chris really could have caught Covid were going to work or actually the trip to hospital to get the Covid vaccination, so tragically it could be ultimately that going for a coronavirus vaccination that led to him catching coronavirus.

Mum-of-three dies after receiving coronavirus vaccine

Lucy Taberer, 47, fell seriously ill after getting the jab and developed blood clots on her brain causing a massive stroke.

Lucy's heartbroken partner and fiance Mark Tomlin, from Aylestone, told [icestershireLive](#) about the devastating impact her death has had on him and their five-year-old son Orson.

He said Lucy, a playgroup leader, initially experienced mild and common side effects in the days after she was vaccinated at the Peepul Centre in Belgrave on March 19.

But her condition gradually worsened causing her to be rushed into hospital and despite the best efforts of medics to save her, she died 22 days after being vaccinated.

"Her gums started to change colour and we got really worried." On April 1 - 13 days after her vaccination - Lucy was rushed to the Leicester Royal Infirmary where blood clots were diagnosed.

Her death certificate says she died of cerebral venous sinus thrombosis and vaccine-associated thrombosis with thrombocytopenia.

Lucy leaves behind two daughters and one son aged 5.

Naiara Suelen de Souza, 31-year-old Brazil nurse technician and mother of two died 4 weeks after shot. She was healthy with no underlying conditions.

According to him, the professional went on January 25 to Manaus and intended to stay a few days, just to support the family.

The Health Department of Manoel Ribas confirmed that, days before the trip, she had taken the 1st dose of the Coronavac vaccine against the new coronavirus.

" She had nothing comorbidity, she had even had her first dose of the vaccine. He went to AM to see his mother and help his sister with childbirth, just so he didn't have to go to the hospital. She was strong, not media efforts. Mom got Covid, then her sister, then she took care of both of them and then she ended up in ICU ", Uncle Edney Martins Gomes said.

Manoel Ribas Health Secretariat confirmed that, days before the trip, she had taken the 1th dose of the Coronavac vaccine against the new coronavirus.

According to Gomes, the pregnant sister suffered complications from the disease, suffered a bleed and ended up delivering hospital birth. She, the baby and the mother of both are well and home.

" You can't understand. Naiara, who was the least risk apparently, became 100 % dependent on the breathing apparatus and died on Thursday [18]. Before traveling, her husband told me that she laid on his chest and said: 'Hey Marcos, take good care of our kids', and I think that was goodbye ".

FAJAR.CO.ID, MAKASSAR - Treasurer of the Association of Indonesian Public Health Scholars and Professionals (Persakmi) South Sulawesi, Dr. Eha Soemantri S.KM, M.Kes passed away. Swab Results Eha before dying shows the result of negative covid-19 .

"The results of the swab before he died , the deceased was negative for Covid," said the public relations of Wahidin Sudirohusodo Hospital Makassar, Aulia Yamin when confirmed by Fajar.co.id, Friday (19/2/2021).

Eha had received special care at the ICU at Wahidin Sudirohusodo Hospital. Eha herself entered Wahidin Hospital after getting a referral from Pelamonia Makassar Hospital.

"He was admitted on February 11, and was referred from Pelamonia Hospital," continued Aulia.

Before dying , Eha complained about shortness of breath and coughing, so she received special treatment at the Wahidin Hospital ICU.

Previously, Eha had received 2 covid-19 vaccinations. In fact, he is also a figure pioneer of vaccination in South Sulawesi. His name is included in the first vaccine recipient in South Sulawesi. Together with several South Sulawesi provincial government officials and Forkopimda in South Sulawesi.

48 hours ago my wife slipped away from me while I was sleeping by her side. I tried cpr and 3 ambulances and a air ambulance arrived. Over 10 people from the NHS tried to save her. But could not. She was Emma Tandy, 38 years old and worked in education. She took the astrazeneca vaccine so she could protect the children, their parents and her family.

I'm here with my 7 year old and 2 year old not knowing what to do next and where to turn. Im struggling to see what my future looks like without her.

Everyone is saying take it step by step but I don't know how at the moment. At the moment I am trying to protect my boys and try to process everything I have witnessed.

ASHA worker dies in Andhra, family alleges adverse event due to COVID-19 vaccine

An ASHA (Accredited Social Health Activist) worker named Vijayalakshmi died in the Government General Hospital in Guntur, Andhra Pradesh, on Sunday. While hospital authorities said that she suffered a brain stroke, her fellow workers and family have expressed apprehensions that she died days after she was given the COVID-19 vaccine. However, government officials have said that the exact cause of death will only be known after the post mortem.

Vijayalakshmi, who was 42, worked as an ASHA in Tadepalli. Her son Sharath told the media that she was healthy before she was given the vaccine on Wednesday, January 20, at the Tadepalli PHC (Primary Health Centre). "She was fine on Wednesday. On Thursday, she said she felt tired, and went to sleep at night saying she was feeling dizzy. Later around 2 am, she got a fever, her blood pressure went down and her condition worsened. Private hospitals refused to admit her, saying it could be an adverse event from the vaccine and told us to go to Guntur GGH."

Sharath also alleged that since his mother was admitted to the GGH, hospital authorities did not communicate her health status and treatment details to her kin properly, until they held an agitation.

Trinidad retiree dies after taking Covid vaccine, and suffering clots, paralysis

April 16, 2021

(Trinidad Express) The 60 year old man who suffered a blood clot and paralysis after taking the AstraZeneca vaccine has died.

The man, a retired Local Government regional corporation health inspector was warded at the San Fernando General Hospital for a week.

Last Wednesday he took the AstraZeneca vaccine at the Princes Town health facility.

By Friday his body became partially paralysed.

A CT scan at a private institution was conducted revealing a blood clot blocking a main artery.

On Thursday Ali pleaded with authorities to not cover up his uncle's ailment but take action to ensure that it does not happen to someone else.

The family shared photographs of the man's body with the Express which showed that his body from the waist down to his toes have turned black in colour.

Ali had said his uncle had undergone CT scans, X-Rays, ultrasound and countless blood samples taken.

Chief Medical Officer (CMO) Dr Roshan Parasram said on Wednesday there are some studies coming out of the European Group where there were 79 cases of a cluster of diseases that occurred in Germany and some other countries in Europe a couple weeks ago.

Parasram said these cases have been investigated by the European Medical Agency as well as WHO (World Health Organisation), which is in the process of doing their final report on that particular cluster. The CMO said there seemed to be a causative link between the vaccine and clotting.

CDC investigates Virginia woman, 45, who died after getting the Johnson & Johnson vaccine last month as US pauses its use over blood clot fears

By HARRIET ALEXANDER FOR DAILYMAIL.COM, 13 April 2021

Virginia is stopping using Johnson & Johnson's COVID vaccine after a 45-year-old woman died following her vaccination in March.

The Centers for Disease Control and Prevention (CDC) is investigating the woman's death, Virginian health authorities announced on Tuesday.

The CDC's Vaccine Adverse Event Reporting System (VAERS) system notes the woman who died began having headaches six days following vaccination, then was hospitalized once the headache worsened and she had started dry heaving.

A head CT scan showed hemorrhaging expanding up to 1.6 centimeters and eventually, cortical vein thrombosis, as listed in the six other cases.

She died on March 18, Richmond.com reported - 12 days after receiving a dose administered by a school.

VAERS does not list any known allergies or underlying medical conditions

56-Year-old Greek Woman Dies Minutes After Second Pfizer Vaccine

By **Patricia Claus** June 18, 2021

The middle-aged woman, who was vaccinated during her 10:00 AM appointment in the morning of Friday at the hospital was pronounced dead just a few minutes after she received her second inoculation with the Pfizer **coronavirus** inoculation.

As is normal procedure, the woman was sitting in a separate area while she was monitored for negative developments that can occur after the vaccine administration.

Just ten minutes after she was vaccinated, she complained of a "burning" pain in her chest and her back, and collapsed.

Doctors on the scene tried to revive the woman, and even to intubate her, but stopped their frantic efforts one hour after she collapsed.

The woman's death is particularly poignant since she and her husband had moved from the capital city of Athens to the village of Kertezi, Kalavrita, in order to feel safer during the pandemic.

Army soldier dies 6 days after receiving Pfizer vaccine

By Yonhap

Published : Jun 14, 2021 - 11:34 Updated : Jun 14, 2021 - 14:09

An Army soldier in his 20s has died six days after receiving his first dose of Pfizer's coronavirus vaccine, officials said Monday.

The soldier, based in Seoul, was found unconscious in his barracks the previous day and transferred to a nearby hospital but died.

It is the second death of a service member following COVID-19 vaccination.

Earlier this month, an Air Force noncommissioned officer in his 40s died after receiving a second dose of the AstraZeneca vaccine.

Mum-of-three died of blood clot after covid vaccine

Her daughter Joanne Drake said: "Two days after mum had her first Covid jab she started feeling very weak. From then on she wasn't eating or drinking, and could barely get to the toilet.

Joanne recalled: "She was given antibiotics for a chest infection which she actually didn't have. Her symptoms were exhaustion, shortness of breath, fever, unexplained cough, skin that was warm to the touch and long periods of immobility.

"She had an autopsy and the coroner said she passed away from a pulmonary embolism which her doctor said was probably due to the AZ jab.

Australian Woman's Death Linked to COVID-19 Jab

BY AAP | June 10, 2021

The Australian Therapeutic Goods Administration says the benefits of the AstraZeneca vaccine far outweigh the risks after a woman died from a blood clot in the brain in the state of New South Wales (NSW).

The TGA says the 52-year-old who died was among four new clotting cases linked to the vaccine.

The clotting condition linked to the vaccine is called thrombosis with thrombocytopenia syndrome (TTS).

So far Australia has seen 35 confirmed cases of TTS, and 13 probable cases.

The first death involved a 55-year-old-man from NSW who died eight days after being vaccinated.

The woman - who was under the age of 40 - died on May 21, after being admitted to hospital with severe thrombosis and platelet deficiency, the statement said.

This one page represents 28 deaths

The deaths in elderly within days of the vaccine is particularly alarming (even though the media told us it would happen)

One-Third of Deaths Reported to CDC After COVID Vaccines Occurred Within 48 Hours of Vaccination

The numbers reflect the latest data available as of Feb. 12 from the CDC's Vaccine Adverse Event Reporting System website. Of the 929 reported deaths, about one-third occurred within 48 hours.

23 die in Norway after receiving Pfizer COVID-19 vaccine: officials

By Amanda Woods

January 15, 2021 | 12:12pm

euronews.

EURONEWS NOW STEINAR MADSEN
CHIEF PHYSICIAN, NORWEGIAN MEDICINES AGENCY

Twenty-three people died in Norway within days of receiving their first dose of the Pfizer COVID-19 vaccine, with 13 of those deaths — all nursing home patients — apparently related to the side effects of the shots, health officials said.

Common reactions to the vaccine, including fever and nausea, "may have contributed to a fatal outcome in some frail patients," Sigurd Hortemo, chief physician at the Norwegian Medicines Agency, said in a Friday statement.

The news comes just over a week after officials reported the deaths of just two nursing home residents after they received the Pfizer jab.

Maine Journal News

2 hrs ·

Reports are coming out of Dover Riverside Nursing Home in NH that between four (4) and seven (7) residents have died after they received the COVID vaccine on Monday afternoon.

88-year-old dies hours after COVID vaccination in second such incident

By JERUSALEM POST STAFF DECEMBER 30, 2020 18:03

13 people died during Moderna's COVID vaccine trial

The evidence presented listed 13 deaths in the trials, with 6 deaths being people who had taken the vaccine, and 7 those who had received the placebo.

Six people died in Pfizer's late-stage trial of the COVID-19 vaccine, the US Food and Drug Administration has revealed just hours after Britain became the first country in the world to roll out the vaccine.

Participant in India's AstraZeneca Covid-19 vaccine trial sues after experiencing 'severe adverse effect'

Priest who volunteered for COVID-19 vaccine trial passes away

Yarah Dalmau

"Dec 18th 2020 – My Dad participated in the Johnson & Johnson Trial COVID vaccine shot. They promised all medical expenses paid for any complications related to COVID for the next 2 years. My Dad found security in the medical expense coverage and possibility to have access to a vaccine- that he decided to do the trial.

Dec 25th 2020 - One week later- Christmas Day – Dad was very fatigued. He felt tired right after the shot and when I spoke with him on Christmas day, I recall he sounded exhausted. Which is unlike him, especially on Christmas.

Jan 4th 2021 By the first of the year, he was very sluggish and found it hard to do his exercises that he does weekly. He always likes to stay

Jan 25th – Dad contacted Johnson & Johnson and they did a COVID test. Results came back 3 days later as negative. They advised he has flu like symptoms and to rest and drink lots of fluids.

Jan 29th my Dad could barely walk. His legs became so weak that he shook when he walked. He thought maybe he was battling a flu and tried to keep resting through the weekend in hopes he would feel better.

Feb 1st - my mom brought him to Lake Mary Emergency room and they immediately transported him via ambulance to Advent Altamonte because of very high troponin levels.

Feb 1st – 4th -My Dad was at Advent Health Altamonte where they ran all kinds of tests and discharged him on the night of Feb 4th . Referring him to an oncologist, infectious disease Dr, cardiologist and PCP,

Feb 5th- Friday I saw my Dad at 11 AM and he could not walk and was very lethargic and sleepy. I called and made all his referral appointments and scheduled him to see his PCP first thing Monday.

Sat, 12/05/2020 - 01:56 — legitgov

Priest who participated in trial for Moderna vaccine dies suddenly | 02 Dec 2020 | A Ukrainian Greek-Catholic priest, who was previously a volunteer in the testing of Moderna's COVID-19 vaccine, has died suddenly in his home. It is still unclear if the 70-year-old's death is related to the vaccine. Fr. John Fields was the Communications and Religious Education

Feb 6th- Saturday. I woke up at 6 AM and drove to my parents house and my Dad was completely out of it. He could not get out of bed, pick up his coffee to drink, lift his head. He did not know what year, day, month we were in. We took him to Advent Orlando and within 20 minutes they got him in and found a blood infection and swelling in brain.

Feb 20th We have been here 2 weeks today, and today my Dad started on dialysis.

I am not an anti-vaxxer by any means. But I think there should be some public awareness of the dangers of being part of a trial vaccine. Especially one that is being done in warp speed. And the chance I would recommend someone to get the Johnson & Johnson vaccine, is slim to none. They have denied any type of connection."

Israel said probing link between Pfizer shot and heart problem in men under 30

By TOI STAFF
23 April 2021, 10:56 pm

Details from an unpublished Israeli Health Ministry report into the side effects of the Pfizer-BioNtech vaccine have raised concerns that there could be a link between the second shot and several dozen cases of myocarditis, an inflammation of the heart muscle, particularly in men under 30, Channel 12 reported Friday.

The concerns come from an intermediate report that was presented to ministry heads and to Pfizer in recent weeks, the TV report said. Excerpts from the leaked report stressed that investigators had not conclusively proved a link, but that they had significant concerns.

The report said that out of more than 5 million people vaccinated in Israel, there were 62 recorded cases of myocarditis in the days after the shot. It found that 56 of those cases came after the second shot and most of the affected were men under 30.

180 deaths after Covid-19 jabs till March 31, 75% within 3 days

NEW DELHI: A presentation made to the National AEFI (adverse event following immunisation) Committee on March 31 recorded that there had been 180 deaths till that time and three-fourths of the deaths happened within three days of the shot.

In other serious adverse events too, the overwhelming majority took place in the three-day window. Even as AEFI deaths are reported daily, causality assessment by the National AEFI Committee appears to be lagging with information about just 10 deaths in the public domain.

Under-30s in Britain offered alternatives to AstraZeneca Covid-19 jab amid blood clot fears

DANIEL FAITAU, EUROPE CORRESPONDENT
2:34PM • SOURCE: 1 NEWS

The move comes after a review by the government's vaccine advisory found 79 people in the UK had suffered from rare blood clots post vaccination by the end of March.

Nineteen of the cases died as a result – three of which were under 30. All of the blood clots occurred after the first dose of the jab was administered.

The Medicines and Healthcare Products Agency (MHPA) says the affected patients were between the ages of 18 and 79, including 51 women and 28 men.

Brazil states halt vaccination of pregnant women after Rio death

Eduardo Simões and Rodrigo Viga Gaier

Tue, May 11, 2021, 7:07 AM · 1 min read

By Eduardo Simões and Rodrigo Viga Gaier

SAO PAULO/RIO DE JANEIRO (Reuters) -Brazilian states halted vaccination of pregnant women on Tuesday after a death in Rio de Janeiro led health regulator Anvisa to warn against the use of AstraZeneca's COVID-19 vaccine for expecting mothers.

A pregnant woman in Rio de Janeiro died after receiving the AstraZeneca shot, according to state Health Secretary Alexandre Chieppe, in a case authorities are still investigating.

Two Canadian provinces stop offering AstraZeneca's COVID vaccine

By Allison Martell and Nia Williams

CALGARY, Alberta (Reuters) -The Canadian provinces of Alberta and Ontario said on Tuesday they would stop offering first doses of AstraZeneca's COVID-19 vaccine, with Ontario citing evidence that the risk of rare blood clots is somewhat higher than previously estimated.

Slovakia suspends use of AstraZeneca COVID-19 vaccine as recipient dies

Tue, May 11, 2021, 10:49 AM · 1 min read

PRAGUE (Reuters) -Slovakia's Health Ministry said on Tuesday it was suspending the use of AstraZeneca's COVID-19 vaccine for people getting their first doses, after experts reviewed the death of a recipient.

The state drug regulator, SUKL, said last week that the death of a 47-year-old woman was likely to be connected to the vaccine because of a predisposition that she had.

Covid: Norway advised to exclude AstraZeneca and Johnson & Johnson vaccines from rollout

f

Matt Mathers

Mon, May 10, 2021, 11:31 AM · 1 min read

A panel of experts has advised the Norwegian government not to use Covid-19 vaccines made by Johnson & Johnson and Oxford/AstraZeneca in its inoculation programme.

Ministers earlier this year suspended use of the AstraZeneca injection amid fears over extremely rare but potentially dangerous blood clots.

In an announcement on Monday, the panel said neither jab should be used after a number of cases of blood clots in people who had been inoculated.

Norway's Institute of Public Health (FHI) also on Monday advised the government against using the Johnson & Johnson shot in its programme, citing similar evidence.

EUROPE 05:12 GMT 23.04.2021

by Igor Kuznetsov

While waiting for the final decision on the controversial vaccine, Norway has decided to distribute its stock of AstraZeneca to fellow Nordic countries that actually want to use them despite the associated risks.

Norwegians run a greater risk of dying from being inoculated with AstraZeneca's vaccine than from COVID-19, the National Institute of Public Health (FHI) concluded in its analysis, recommending the vaccine, previously linked to serious complications in the form of rare blood clotting and haemorrhage amid low platelet counts.

Abstaining from the vaccine could possibly prevent up to 10 deaths related to side effects, the FHI said, according to the newspaper *Verdens Gang*.

So far, Norway has seen five cases of serious incidents reported shortly after vaccination, with three fatalities. FHI has calculated the mortality rate from the AstraZeneca vaccine as 2.3 people per 100,000 vaccinated.

The FHI stressed that continuing to inoculate will by contrast expose younger women to an "unreasonably high risk", given the current relatively levels of infection in Norway.

The FHI stressed that continuing to inoculate will by contrast expose younger women to an "unreasonably high risk", given the current relatively levels of infection in Norway.

Furthermore, the institute is against offering the vaccine on a voluntary basis, which has been proposed both in Norway and fellow Scandinavian nations.

"We believe that such an alternative may appear unethical and with a high risk that those who make such a choice have not fully understood the risk to which they are exposed," the institute said.

Gibraltar is an interesting case study on safety

The colony had only 16 COVID deaths from March 2020 - Jan 9, 2021
Yet they had 53 deaths within 10 days of the vaccine rollout.

Expatica.com reported that the injections started on January 9th, and that by Sunday night January 10th, 5,847 doses had been administered.

Gibraltar began rolling out its vaccination programme on January 9 using the Pfizer vaccine and by Sunday night had administered 5,847 doses — covering around 17 percent of the population. (Full Article.)

The [Government of Gibraltar](#) reported that as of January 10th, just one day after the injections started, 4 people immediately died:

53 dead in Gibraltar in 10 days after Pfizer injections started

Gibraltar is a British Colony at the southern tip of the Iberian Peninsula attached to the country of Spain. It's population is just over 30,000 people, and it is best known for its huge "rock," the "Rock of Gibraltar."

I have been contacted by residents in Gibraltar stating that 53 people have died in 10 days immediately following the roll out of injections of the Pfizer mRNA COVID injections, and calling it a "massacre."

Local media reports confirm the deaths, but blame them on COVID, and not the COVID injections.

However, prior to the roll out of the injections, it is reported that only 16 people in total died "from COVID" since the beginning of the "pandemic" about a year ago.

A Kevin Rushworth [reported](#):

Tiny Gibraltar Shines Huge Light on Vaccine Deaths

Ever since the epidemic began, sorting genuine Covid deaths from others has been a major issue. Now we have the added problem of vaccines in the mix. The UK now allegedly has the highest daily "Covid death" rate ever. Even higher than the "First Wave," in spite of the substantial degree of herd immunity that has inevitably accrued since the beginning. This atypical "Second Wave" coincides with the vaccine roll-out. Are the two connected?

Gibraltar, normally called simply "Gib," provides a very clear picture. This tiny British Colony, barely three miles long, appended to the South coast of Spain, has only 32,000 residents. It had suffered relatively little from the epidemic before the 9th January this year, with only seventeen deaths for the whole period. The death rate was well down the Deaths per Million League Table. This was not due to isolation, since Spanish workers have continued to pour into Gib every morning, and back out every evening.

University researchers now have data showing 'significant mortality from vaccine'

Arutz Sheva

www.IsraelNationalNews.com

Vaccination in Israel: Challenging mortality figures?

Mordechai Sones, Feb 18, 2021

A front-page article appeared in the *FranceSoir* newspaper about findings on the *Nakim* website regarding what some experts are calling "the high mortality caused by the vaccine."

The paper interviews University of Aix-Marseille University Faculty of Medicine Emerging Infectious and Tropical Diseases Unit's Dr. Hervé Seligmann and engineer Haim Yativ about their research and data analysis. They claim that Pfizer's experimental shot causes "mortality hundreds of times greater in young people compared to mortality from coronavirus without the vaccine, and dozens of times more in the elderly, when the documented mortality from coronavirus is in the vicinity of the vaccine dose, thus adding greater mortality from heart attack, stroke, etc."

Dr Hervé Seligmann works at the Emerging Infectious and Tropical Diseases Research Unit, Faculty of Medicine, Aix-Marseille University, Marseille, France. He is of Israeli-Luxembourg nationality. He has a B. Sc. In Biology from the Hebrew University of Jerusalem, and has written over 100 scientific publications.

FranceSoir writes that they follow publications, data analyzes, and feedback from various countries on vaccination, and have therefore taken an interest in the *Nakim* article, asking to interview them in order to understand their analysis and its limitations.

The authors of the article declare they have no conflicts or interests other than having children in Israel.

After a presentation, the authors discussed their data analysis, the validations carried out, limitations, and above all, their conclusions that they compare with data received via a Health Ministry Freedom of Information Act request.

Their findings are:

- There is a mismatch between the data published by the authorities and the reality on the ground.
- They have three sources of information, besides the emails and adverse event reports they receive through the Internet. These three sources are Israeli news site *Ynet*, the Israeli Health Ministry database, and the U.S. federal Vaccine Adverse Event Reporting System (**VAERS**) database.
- In January 2021, there were 3,000 records of vaccine adverse events, including 2,900 for mRNA vaccines.
- Compared to other years, mortality is 40 times higher.
- On February 11, a *Ynet* article presented data related to vaccination. The authors of the *Nakim* article claim to have debunked this analysis based on data published by *Ynet* itself: "We took the data by looking at mortality during the vaccination period, which spans 5 weeks. By analyzing these data, we arrived at startling figures that attribute significant mortality to the vaccine."
- The authors say "vaccinations have caused more deaths than the coronavirus would have caused during the same period."
- Haim Yativ and Dr. Seligmann declare that for them, "this is a new Holocaust," in face of Israeli authority pressure to vaccinate citizens.

"Our reanalyses of these data explain why during the massive vaccination project initiated mid-December 2020 during a confinement, daily new confirmed COVID-19 cases failed to decrease as they do during confinements, and, more importantly, why numbers of serious, critical, and death cases increased during that period that covered at least one month. From mid-December to mid-February (two months), 2,337 among all Israeli 5,351 official COVID-deaths occurred. Our analyses indicate orders of magnitude increases in deaths rates during the 5-week long vaccination process, as compared to the unvaccinated and those after completing the vaccination process. Presumably, asymptomatic cases before vaccination, and those infected shortly after the 1st dose, tend to develop graver symptoms than those unvaccinated.

"The *Ynet* article is organized in an exciting way and uses data provided in an erroneous way by the Ministry of Health. It is unclear whether this was intentional to prove the vaccine's efficiency or if this was done erroneously because the provided data were misunderstood. Note that in Israel, all vaccines are from Pfizer.

"The data in the table, rather than indicating the vaccine efficacy, indicate the vaccine's adverse effects," the authors conclude.

Connecticut Confirms at Least 18 Cases of Apparent Heart Problems in Young People After COVID-19 Vaccination

U.S. CDC delays meet on heart risk from COVID-19 shots due to Juneteenth holiday

By Reuters Staff

Gabe (17) received the second dose of Pf—and the following day began experiencing severe chest pains, dizziness, high fever, nausea, and vomiting.

After spending ten hours in the emergency room he was diagnosed with myocarditis, inflammation of the heart wall. The hospital admitted that this is an adverse reaction they're beginning to see among young males who have received the v—ine. He's being treated with various medications and has been sent home for observation.

"We told him to make the decision for himself (he's almost 18). He's not thinking it was such a good idea right now." — M. Gillespie, mother

Justin (21) was told that he would need to be v—nated in order to attend his college. Within 24 hrs of the second dose of Mod— he began experiencing heart palpitations, fever, and flu-like symptoms. A day later, his Dad brought him to the hospital where he was admitted and diagnosed with myocarditis; inflammation of the heart muscle.

His doctors said that had he waited to be seen the damage to his heart could have been permanent. They also said they had noticed an increase in heart issues being seen in the emergency room; he was the sixth patient they had seen that week. They hadn't connected the dots before, but plan to raise awareness about it going forward.

Kennedy (19) received the second Pf. v—ine and soon after began experiencing severe chest pain, pressure, and shortness of breath.

She was brought to the hospital where a team of doctors performed extensive testing and it was determined that she had myocarditis; inflammation of the heart wall. The team said she was the second young adult they knew of this happening to in the local area.

Kennedy is home now and will continue to be on heart medication for three to six months under the care of a cardiologist. It's unknown whether or not there will be permanent damage to her heart.

Nico (14) began experiencing severe chest pains and had trouble breathing within 24 hrs of the first dose of Pf—er.

He was taken to the emergency room, more than once, and ultimately required hospitalization. He was diagnosed with myocarditis, inflammation of the heart. In total, he has undergone thirty two blood tests, six echocardiograms, two chest x-rays, four EKGs, and five troponin tests. He's had numerous follow up appointments with a cardiologist, and has been advise... See More

Exclusive: Athlete Who Recovered From COVID Facing 'Very Different Future' After Second Dose of Pfizer Vaccine Triggers Myocarditis

ARMY ROTC

Greyson Follmer, an Ohio State University (OSU) student, was an elite athlete and member of the university's chapter of the Reserve Officers' Training Corps (ROTC).

But, according to his mother, the 19-year-old from Ohio is looking at a very different future now, after he developed severe [heart complications](#) following his second dose of Pfizer's COVID vaccine.

Marie Follmer said nobody warned her about the potential for increased risks of COVID vaccine-related adverse events for people like her son, who already had [COVID](#) and had acquired natural immunity.

Greyson has played sports since he was 4 years old. He was an athlete who played in the state soccer championship in high school and then went on to OSU and started college during the COVID pandemic. He also joined ROTC his freshman year and was very active — running several miles every day with heavy packs on his back.

Greyson was perfectly healthy and had no underlying conditions except for asthma — which didn't affect his athletic abilities — and food allergies.

Like most students early on in the year, Greyson and his friends got COVID. Though most had no symptoms, Greyson experienced mild flu symptoms — though they were nothing like his post-vaccine symptoms, Follmer explained.

Greyson received his first dose of [Pfizer](#) on April 16, and a second dose on May 7. After the first dose Greyson experienced minor symptoms, but his mother didn't connect them to the COVID vaccine.

It was after his second dose that things really changed, Follmer said. Greyson experienced significant symptoms shortly after his second dose. Three times he was taken to [Nationwide Children's Emergency Hospital](#).

"My son feels like he's having a heart attack 24/7," Follmer said. "He now has high blood pressure, severe chest pains, back pain, elevated kidney levels, hypothyroidism, inflamed lymph nodes in different areas of his body, and he can't work or exercise."

Greyson has seen numerous doctors and specialists. His family has spent more than \$12,000 in one month. Lab work is covered by insurance but his other treatments are not. Greyson is doing stem cell treatments, taking Ivermectin and numerous supplements to support his condition.

Follmer said she has since reported her son's [adverse reaction](#) to VAERS (ID1395886), but no one has followed up on her son's case nor has the report been added to the system. She also tried calling the CDC to see if someone there could help them.

Justin Harris is with Marsha Frederick Harris. June 10 at 10:38 PM · 🌐

Marsha and I have waited a while to share, but we want other parents and friends to make an educated decision. Isaiah (18) received his 2nd Pfizer dose on April 30th, and within 48hrs had a heart attack and was diagnosed with myocarditis. He stayed in the hospital for 4 days,

June 30 update

here is our update from the Cleveland Clinic. Dr. Klein confirmed Isaiah's heart attack and his myocarditis. Isaiah will have to be on a low key lifestyle for the next 6 months to prevent another heart attack, and to see if the heart swelling goes down (myocarditis). Dr. Klein gave him 3 scenarios: 1. He will have permanent damage to his heart. 2. It can result in death 3. It may eventually heal. He will be monitored closely for the time being.

EmilyJo @eekymom

I am VERY pro-vaccination but we are one of the rare cases. My teen son had his vaccine on Wed. He started having chest pain and fatigue on Friday. He's been hospitalized with vaccine induced myocarditis since.

Jordan (15) received the second Pf. v—ine on Thursday and was in the middle of church on Sunday when he began experiencing severe chest pains, which he described as feeling like a heart attack.

He was immediately taken to the emergency room where doctors found that his heart & kidneys weren't functioning properly. This was an adverse reaction to the v—ine that they were familiar with, and had seen several times already. The diagnosis? Myocarditis; inflammation of the heart wall.

"I was confident that my healthy young boy would be fine with it. I thought it would be good to have [him] v—inated so that I could check that box and move on, but I was wrong. His world has literally been turned upside down." — Angela, his mother

Lisa Garofano @LisaGarofano

This is our son Wyatt at CHOP CICU last week after getting #Pfizer 2nd dose. Spent 5 days @ CHOP. He almost died. Dx Acute Heart Failure, Perimyocarditis. We hope he makes a full recovery but they don't know the long term implications. Follow up at Cardiac Clinic is tomorrow.

Washington Co. teen's parents warning about myocarditis

By Sarafina James, WPXI-TV
May 26, 2021 at 10:40 am EDT

PITTSBURGH — Alex Franks, 17, was a healthy high school junior who never had any medical issues until a few weeks ago.

Just two days after getting his second dose of the Pfizer COVID-19 vaccine, the Washington County teen had trouble breathing.

“It was the middle of the night. I was walking upstairs from the basement when I got a sudden constricting feeling in my chest,” Franks said. His parents immediately rushed him to the hospital.

“That’s when things became eye-opening for us because it became much more serious very, very fast,” said Karen Franks.

Doctors discovered Alex Franks had inflammation around his heart.

Kenmore teen develops myocarditis after 2nd vaccine shot; CDC

“I’m 18 years old, no medical record of any kind,” Morud said.

But about 48 hours later, some different symptoms cropped up, like chest pain.

“That’s they found out it was the myocarditis,” Evan Morud said.

The family said Evan’s heart rate was 140, about double what’s normal. But even more alarming – his heart function was way down.

“I was pretty scared at first, just because I wasn’t really sure what it was. My first initial thought was, am I going to have any long-term damage?” Morud said.

Isaiah Harris
Pfizer May 2021
Severe Adverse Reaction: Myocarditis
resulting in a Heart Attack
Age: 18 Years Old

Hours after attending his college graduation, Isaiah Harris was rushed to the emergency room after complaining of being unable to breathe. Once at the hospital, Harris suffered a heart attack while waiting for treatment.

The first hospital he visited after suffering an adverse reaction to Pfizer's COVID refused to believe his symptoms were a result of the COVID shot. Isaiah was diagnosed with inflammation of the heart, or myocarditis.

After being hospitalized for four days in Rogers, Arkansas, Harris was released and sent home with medication to numb his heart and reduce the swelling. But when he tried to phone the doctor to say he was still suffering from heart pain, the nurses stonewalled him, he said. "One of the nurses who treated me picked up," said Harris. "Some words were exchanged and she ended up hanging up on me and wouldn't get me through to the doctor."

Isaiah went to see Dr. Allen Kline at the Cleveland Clinic in Ohio, after being referred by a friend. Kline is aware of the link between mRNA COVID vaccines and myocarditis.

He's witnessed hundreds of cases, said Harris. Isaiah told Kennedy he felt pressured to get the vaccine. He said he thought it was safe, that there weren't any risks. "I plan on going to medical school and thought it was a requirement," said Harris. "There's a lot of pressure to get it right now."

Draper teenager hospitalized with blood clots after COVID-19 vaccine shot

DRAPER, Utah (ABC4) – The day after his COVID-19 vaccine shot, 17-year-old Everest Romney felt his neck swelling. In the coming days, he suffered from severe headaches.

"He could not move his neck without the assistance of his hands," says mother Cherie Romney.

That was just a few days after the shot. Plus, now her son suffered from fevers and incessant headaches.

Finally, after more than a week of the symptoms, the Corner Canyon High School basketball player and his family had answers: two blood clots inside his brain, and one on the outside.

"The hardest thing was I let him get that shot. And he was healthy and well before," says Romney.

17-year-old gets shot in order to play soccer... now cannot play soccer because of shot

17-year-old diagnosed with heart condition after receiving COVID vaccine, father tells 'Fox & Friends'

Dr. Nicole Saphier: CDC 'cherry picked the way they present the data' on adverse effects of vaccine

age 17

A 17-year-old student who received the Pfizer coronavirus vaccine in order to attend school and play soccer was diagnosed with heart issues soon after the shot, his father explained Tuesday on "Fox & Friends."

"A week later, he came home and started telling me that his heart was hurting every time he had a heartbeat," Fabio Berlingieri told "Fox & Friends."

After assuming the issue came from a pulled muscle from playing sports, Berlingieri took his son to the walk-in clinic to get his heart checked out. He said the clinicians did an EKG to check for different heart conditions. He also took his son to a cardiologist to get a sonogram.

Berlingieri said he received "bad news" the next day when the results came back and he was advised to take his son to the emergency room immediately on the day of his prom.

"His troponin levels were off the charts," he explained, adding that his son was in the hospital receiving care for a couple of days.

Now that Berlingieri's son has a heart condition, he missed his prom and can't do "all the things he loves to do," including playing soccer in the fall and surfing.

18-year-old hospitalized from J&J pulmonary embolism WHILE his mother is hospitalized from Pfizer pulmonary embolism

 Leigh-Ann Dale
June 20 at 1:40 PM

Pfizer
May 3

Massive DVT (blood clot) in my left leg, from my ankle to my abdomen) that broke off into pulmonary embolisms in my right lung. (Blood clots)
Age 43 female
Saskatoon, Saskatchewan

I started get a pain in the back of my knee that just wouldn't go away.
I was completely sidetracked away from my pain as my 18 year old was hospitalized on May 19-20th (at RUH Saskatoon) for bilateral pulmonary embolisms caused by the J&J vaccine that he received in Arizona while going to school.

Once he was home and settled and set up to make his adverse event on VAERS.
My leg got worse. 6 days after taking my son to RUH, I had him drive me to City Hospital (Saskatoon) because I couldn't walk on my leg. So much pain. No swelling, no redness none of it.

Because the triage nurse heard my story about my son, they did some quick blood work for my D-Dimer (looking for evidence of a clot.)
Your results should be between 0-500.

My D-Dimer was 101630!!!!

They did a Doppler ultrasound on my leg and found a massive DVT from my ankle past my groin into my abdomen.

They did a Doppler ultrasound on my leg and found a massive DVT from my ankle past my groin into my abdomen.

They ambulated me to St Paul's hospital (Saskatoon) to remove it by interventional radiation.

They didn't a contrast CT when I arrived and they realized the clot had broken off into my right lung.

I spent a week in hospital where they had to put in a picc line because my hands and arms were obliterated.

I was back in the hospital 2 days later with a massive soft tissue infection in my arm, armpit, breast and side,

age 18

I almost lost my 18 year old son to something I thought he needed to attend school in the fall.

JUN 4 - myocarditis

Oregon teen who said his heart hurt was hospitalized with myocarditis after COVID-19 vaccination

The teen, who asked that his name not be used to protect his privacy, had his second shot of the Pfizer-BioNTech vaccine last Thursday, and was looking forward to getting back to a semblance of normal, even if it was just hanging with his friends in public with no mask.

The next day, however, he started feeling some of the more common side effects of the vaccine: a fever, lack of appetite. He even mentioned to his mom that his heart hurt.

It felt like something was squeezing his heart

age 15

A half hour later, they were walking into a deserted emergency room at Providence St. Vincent Medical Center. The docs took some blood, did an electrocardiogram, and 45 minutes later he was being admitted to the hospital, put on anti-inflammatories and oxygen, his mom said.

The diagnosis, according to Providence: myocarditis, inflammation of the heart.

The Oregon Health Authority is aware of at least 11 cases in Oregon of myocarditis or pericarditis, inflammation of the sac surrounding the heart, following COVID-19 vaccinations.

LET'S LOOK AT

THE INJURIES

APR 22 - gets shot → **MAY 9 - half of small intestine removed**

Langley-area man loses 2 metres of intestine after a blood clot following his AstraZeneca jab

Yvette Brend · CBC News ·
Posted: May 15, 2021 5:00 AM PT

A formerly healthy 43-year-old father from Langley, B.C. — who is in hospital recovering from complications following a rare blood clot — is warning others to watch for signs of trouble after receiving an AstraZeneca-Oxford COVID-19 vaccine.

Shaun Muldoon and his wife Tara say that doctors confirmed to them that he's a victim of the unusual but dangerous syndrome linked to the AstraZeneca vaccine. The clot in his abdomen will leave him with life-long effects after two metres of his small intestine was removed.

Shaun Muldoon believes he wasn't adequately warned of the vaccine's risks or protected from them.

The AstraZeneca-Oxford COVID-19 vaccine has been linked to vaccine-induced immune thrombotic thrombocytopenia (VITT). Symptoms include severe headache, pain, swollen limbs, nausea, vomiting and shortness of breath.

"This is life changing for us," she said. "I feel like we have a long road ahead of us as far as his recovery goes. He's lost half of his small intestine."

Her husband was vaccinated on April 22 and ended up in emergency surgery on May 9. She said that he initially felt nauseous but symptoms progressed to fever, headache and vomiting. Each time he felt ill he called his doctor or the HealthLinkBC line at 811 and was advised to stay home — even after going in to have a test for COVID-19 — which turned out to be negative.

He finally went to emergency on May 8 after he began to vomit and pass blood.

Muldoon posted on social media that he wished he'd had more insight into the "worse case scenario."

"Seventeen days after my vaccine [I] ended up going into emergency surgery to remove over six feet of my small intestine. I had a massive blood clot. Second surgery two days later to remove more. My surgeon told me it was very close."

Tara Muldoon said the ordeal has been difficult for the family which includes two school-aged children.

Early March - gets shot —————> Mid March - 85% of small intestine removed, multi organ failure, coma, \$300,000+ in hospital bills

Kendra Lippy, a healthy 38-year-old, nearly died this spring after severe blood clots thought to be caused by the Johnson and Johnson vaccine sent most of her organs into failure. Now facing a life without most of her small intestine, she wants to see a complex and opaque federal compensation system for those who suffer a COVID-19 vaccine injury improved.

Her blood clots developed in March before the severe potential side-effect from the Johnson and Johnson vaccine was well publicized. She spent 33 days in the hospital as her doctors tried to determine the source of the problem. The treatment, including 22 days in intensive care, left the Colorado Springs resident with hundreds of thousands of dollars in debt. She is anxiously awaiting the final total of her uninsured care.

For Lippy, who had no underlying health conditions, the rare risk became very real.

The first sign that Lippy's vaccine had caused problems was a headache, she said.

"It felt like needles were pressing in my brain," she said. "So I left work early, came home, tried to rest and take a nap."

A few days later, she suffered severe abdominal pain and then started vomiting, she said. She was admitted to St. Francis Hospital in mid-March before the Johnson & Johnson blood clots had become major national news, and the federal agencies sent guidance to doctors on how to treat them.

For much her time in the hospital, physicians were perplexed and struggled to diagnose her condition, at one point they tried to determine if she had a blood disease, Lippy said.

Lippy was in a coma and most of her organs were failing, when a doctor called a meeting with her family to see if she would want her care to continue, her mother Debbie Lippy, recalled.

"I said, 'She would want you to fight for her,'" Debbie Lippy said.

Debbie Lippy also suggested to doctors the COVID-19 vaccine could have caused her daughter's blood clots after hearing about the rare side effect on the news. That was a key first step to recovery and led to doctors eliminating heparin as part of the treatment, she said.

Now back at her parent's home recovering, Lippy is learning to live with a small intestine that is 90 centimeters long and working with professionals on a long-term diet. A large portion of the intestine died without blood supply and left her reliant on receiving some nutrition intravenously, through her arm.

'Young, healthy' South Mississippi man suffers stroke hours after receiving J&J vaccine

By Karen Abernathy | April 14, 2021 at 7:30 AM CDT - Updated April 14 at 5:09 PM

ST. MARTIN, Miss. (WLOX) - When the news broke about the pause of the Johnson & Johnson vaccine Tuesday, one Coast family was already living with a tragedy they believe was caused by the vaccine.

It started out as a normal day for 43-year-old Brad Malagarie of St. Martin. This busy father of seven spent the morning at his D'Iberville office before heading to get a Johnson & Johnson vaccine a little after noon.

He returned to work, and within three hours coworkers noticed he was unresponsive at his desk.

"They called me and said he had that vaccine and something is wrong, we think it's a stroke," said Celeste Foster O'Keefe, Malagarie's aunt.

Malagarie was rushed to the hospital and diagnosed with a stroke. A blood clot had lodged in his left middle cerebral artery. O'Keefe, who is also Brad's boss, said the family believes without a doubt that the vaccine caused the stroke.

"He can't talk now and he can't walk. He's paralyzed on the right side. He knows who we are and he will just cry when he sees us," O'Keefe said.

Stamford man vows to battle back after losing his leg weeks after receiving AstraZeneca vaccination

By Andrea Scholes - andrea.scholes@liffepublishing.co.uk

A former taekwondo champion who had his leg amputated weeks after receiving the covid vaccination has vowed to battle back.

Dave Mears was crowned world champion in 1984 and went on to build a successful teaching career before moving to Thailand.

Dave's flu-like symptoms started within hours of having the AstraZeneca vaccination against Covid-19 on March 4. His symptoms got progressively worse over the following month.

His foot started to swell and he was rushed to Addenbrooke's Hospital for treatment on April 10. His left leg was later amputated below the knee.

He said: "It started with a horrendous fever. I was admitted to hospital on the 10th and on the 12th my foot just exploded. There was blood everywhere.

"At first they said I might lose a couple of toes, but then it was half my leg.

FEB 19 - gets shot

MAR 12 - amputation

Man has leg amputated after three weeks after vaccine

A MAN'S leg was amputated because of a rare blood clot he suffered three weeks after his first dose of AstraZeneca vaccine.

Construction worker Goran D., 50, told reporters in [Austria](#) that had severe pain in his leg and "spat blood once or twice".

A scan at the Favoriten Clinic revealed he had a pulmonary embolism and thrombosis.

Goran was operated on a few days later, before having two more lots of surgery in the same week - with each operation lasting five to six hours.

He even had to be put into an induced coma for the third operation.

"Fortunately, my lungs started working again," he said.

Doctors then gave him the bad news that his lower leg would have to be amputated.

The procedure was carried out in another hours-long operation.

Goran, who spent nine days in intensive care following the surgery, said: "I will never forget that pain when I woke up for the rest of my life."

Doctors believe the pulmonary embolism and thrombosis he suffered were directly linked to the AstraZeneca jab.

Henderson - Las Vegas

Las Vegas woman, 18, suffered seizures, clots in brain after J&J vaccine, family's pastor says

UPDATED 16 HRS AGO | POSTED ON APR 19, 2021

Emma's is now responsible for over \$513,000 in medical bills that J&J will not pay

LAS VEGAS (FOX5) -- An 18-year-old Clark County woman suffered seizures and clotting in the brain after receiving the Johnson & Johnson COVID-19 vaccine on or about April 1, according to a GoFundMe campaign raising money for her medical expenses.

The woman, identified as Emma Burkey, was one of six women across the country who experienced a serious clotting side effect after receiving the one-shot vaccine.

spokesperson, Burkey was initially treated at St. Rose Hospital, Siena Campus in Henderson but was subsequently airlifted to Loma Linda Hospital's special neural treatment unit near San Bernardino, California. "Emma was put into an induced coma, ventilated and at least three brain surgeries have been done to repair blood clots," the GoFundMe states.

Bethel Park woman paralyzed 12 hours after getting first dose of Pfizer vaccine, doctors searching for answers

April 19, 2021 at 6:44 pm EDT

BETHEL PARK, Pa. — There have been some negative side effects reported worldwide from the Pfizer, Moderna and Johnson & Johnson COVID-19 vaccines, but a Bethel Park woman told Channel 11 she has been affected by something that hadn't been seen at all yet: paralysis.

The 33-year-old woman, who asked to remain anonymous, said she felt fine in the hours after getting the first dose of the Pfizer vaccine last week. However, she said 12 hours later, she woke up in the middle of the night with no feeling in her arms or legs.

Paramedics came and rushed her to Jefferson Hospital. In the coming days, she was moved to Allegheny General Hospital in the Northside and then the Cleveland Clinic -- as doctors ran a multitude of tests to figure out how and why this happened. An MRI and spinal tap were clear, and her blood work all came back negative, ruling out any rare diseases or disorders.

"There is just nothing they can find wrong with me. No underlying conditions, I have nothing in my history and they are basically telling me, 'You're healthy and we can't figure out why this is going on,'" the woman told Channel 11.

Texas teen contracts GBS (known vaccine side effect) within weeks of shot

A Texas teenager diagnosed with Guillain-Barré syndrome (GBS) a few weeks after his first dose of the COVID-19 vaccine said he believes the vaccine is to blame, according to a [local Houston news channel KPRC2 report](#).

A few weeks after receiving the vaccine, McGlaun became weak and had difficulty walking. He was admitted to CHI St. Luke's Health where he was diagnosed with GBS.

A few weeks after receiving the vaccine, McGlaun became weak and had difficulty walking. He was admitted to CHI St. Luke's Health where he was diagnosed with GBS.

One case of GBS [was reported](#) in a vaccinated participant in the J&J COVID vaccine clinical trial.

There's no known cure for GBS,

Alberta man says AstraZeneca shot led to serious health issue, wants federal compensation

"I couldn't pick up things that I could normally grasp and pick up, and then I went to leave the work station and my left leg wouldn't work and I went down to one knee, and then I started panicking," he said.

The Edson, Alta., man said after being sent home from the hospital a second time, he was eventually sent to meet with neurologists in Edmonton. That's when an issue was discovered in his spine and he underwent an intravenous transfusion.

"The one doctor asked me straight out: 'Did you have the AstraZeneca vaccine in the last two weeks?'" Hellekson said.

Hellekson said he was diagnosed with Guillain-Barré Syndrome (GBS) — a rare neurological disorder that results in the body's immune system mistakenly attacking part of its peripheral nervous system. GBS can range from a very mild case with brief weakness to nearly devastating paralysis.

Greek doctor & nurse paralyzed same day as vaccination

Greek Hospital Administrator Faces Criminal Prosecution for Reporting Nurse's Paralysis after Second mRNA Shot

CORFU, GREECE – A Greek nurse is now paralyzed after receiving a second dose of mRNA. The 40-year-old nurse is a mother of two and has been a nurse for 17 years.

The nurse, whose name has not been disclosed, developed a fever, followed by excruciating pain throughout her body immediately after the second shot. She was rushed to the hospital when she was unable to move or feel her lower extremities.

Michalis Giannakos, President of the Panhellenic Federation of Public Hospital Workers (POEDIN), told [Open TV](#) in the East Attica region that X-rays came back clean. The nurse is now undergoing neurological assessments.

Giannakos said the nurse “was in perfect health” prior to receiving the second mRNA shot. It is believed that the nurse developed [Guillain-Barré syndrome](#).

The Prosecution of the Court of First Instance is considering pressing criminal charges against Giannakos. Greek media outlet [Ethnos](#) is reporting that a prosecutor is investigating if Giannakos committed the crime of “[spreading fake news](#).”

His crime is expressing an mRNA adverse effect with “too much certainty.”

Corfu doctor paralysed after second COVID-19 jab

With paralysis in the lower extremities, fatigue and myalgias, a doctor is being treated at the general hospital of Corfu.

Yesterday, Doctor Spyros Skiadopoulos received the second dose of the COVID-19 vaccine.

At night he did not feel well as his body weakened and he felt paralysis in the lower extremities and pain in the lower back.

A few days ago, a nurse on the same island had similar symptoms after receiving the COVID-19 jab.

Man, 60 paralysed, near death after Covid vaccination

Anna Ramdass Apr 14, 2021 Updated Apr 14, 2021 3 min to read

A Princes Town family is blaming the AstraZeneca vaccine for the sudden paralysis of a 60 year old relative who suffered a blood clot and is hospitalised.

The man's relatives told TV6 News that doctors at the San Fernando General Hospital have given the man days to live.

They said the father of two took the vaccine last Wednesday and by Friday he was in a state of paralysis.

The man is a recently retired Local Government regional corporation health inspector .

The man's nephew, Faleel Ali, told TV6 that doctors admitted it was the vaccine that caused the blood clot.

"They say that there is no other complication that can cause a blood clot to his body, the only thing that they see was the vaccine that caused the blood clot," he said.

Ali said last week his uncle was his regular strong vibrant self but everything changed when he took the AstraZeneca vaccine.

He said by Thursday morning his uncle began experiencing abdominal pains and by Friday he suffered partial paralysis, causing relatives to rush him to the Princes Town district health facility.

"At this point everything from his waist go down to his toes is totally black," he said.

Nashville woman unable to walk claims Pfizer COVID-19 vaccine is to blame

by: Alex Denis

Posted: Apr 26, 2021 / 06:33 PM CDT / Updated: Apr 27, 2021 / 06:51 AM CDT

NASHVILLE, Tenn. (WKRN) — Brandy Parker-McFadden sits in her Vanderbilt hospital bed, unable to stand.

The mother of three received her second Pfizer COVID shot on April 16. Hours later, an unusual sensation started in her legs.

"Then it turned into a horrible neck pain, and it just kept getting worse and worse," recounted Brandy.

Her husband James knew something was terribly wrong. "She was screaming in pain. She is one that is pretty stoic. That's what created the sense of urgency."

James rushed Brandy to the emergency room at Vanderbilt, and then the unimaginable happened.

"I woke up. I can't move my arms. I can't move my legs. So, he's freaking out. The doctors are panicking," Brandy recalled.

"I'm holding her hand, and her hand is limp throughout the whole thing while she's screaming in pain," remembers James, "And all the test results are coming back negative."

APR 13 - gets 2nd shot

APR 13 - chest pain, ER, myocardial infection

Christopher Boeckman
June 21 at 1:50 PM · 🌐

Four (4) weeks later I [again reluctantly] received the second dose of the Pfizer COVID-19 vaccine on April 13, 2021 at 9:36am. Ten (10) hours later, my entire body ached and I was feverish at 103 degrees – I had the same thoracic/chest pain which intensified but my entire body was in pain at the time intensifying through the night capped off with the coldest/hottest chill/convulsions I have ever experienced. This all lasted about one (1) day. The aches and fever subsided, the thoracic/chest pain remained but decreased back down at the 5/10 level I was used to over the past month – again, convincing myself I must have a herniated disc or muscle strain or something... because

I found myself back to the ER, walking inside this time, at 9:32am on May 9, 2021. As soon as I said chest pain, I was taken back immediately, hooked up to some machines, given some meds to chew on, and had blood drawn amongst other tests/scans. The bloodwork came back very quickly showing elevated Troponin – indicating heart injury. I was transported to a different hospital, the cardiac ward. The first cardiologist I saw was dumbfounded upon my entry saying "by the initial results and description, I would have thought you would be a 60 year old man"... his curiosity would continue as he learned more about my [extremely healthy] lifestyle. This cardiologist, and every cardiologist since, would not have any answers as to why this happened. They all said "maybe this, maybe that" (none of which were the vaccine) and after the longest 30+ hours of my life and still with no answers but Troponin levels trending downward, they decided to release me with a prescription for 90 days of Colchicine, 14 days of Motrin, an order for a Heart MRI, and a follow up.

The final diagnosis was a non-ST elevated myocardial infarction and myo/pericarditis.

Since that day, many new reports have come out regarding the Pfizer COVID-19 vaccine relating to myocarditis in [specifically] young males. I have noted this multiple times with all of my doctors who have all seemingly dismissed the possibility. Finally, during my most recent follow-ups with my primary care doctor, and with the CDC finally looking into the issue, we submitted my symptoms – soon after which, the VAERS team asked for my medical records and just this past week I received a call from the Vcheck vaccines follow up team who have marked my case as "serious" and say I will be contacted by the CDC.

APR 20 - gets shot

APR 27 - Heart Attack

Tom @TomSchulz · Apr 28

Yesterday, I had a heart attack

My cardiovascular system is completely normal & healthy

But last week I took the Pfizer vaccine and there are reports that it's been causing heart complications

Most causes have been ruled out and it looks like Pfizer may have done this to me...

This vibrant, 65-year-old retired nurse, suffered a thrombotic stroke 8 days after her second shot.

Her daughter has reported it to Pfizer but has yet to receive a response.

Almost all cases of disseminated intravascular coagulation (DIC) or cerebral venous thrombosis (CVT) after receiving the AstraZeneca vaccine were among women under age 55. Nine of these individuals died, according to the EMA statement.

Two different men both in critical condition both 36 hours after shot

Thaddeus Gala

February 14 at 2:20 PM

My dad got vaccinated... 36 hours later he was in the hospital with heart failure. We thought we were going to lose him.

Me: Dr Cardiologist (DC), what's wrong with our dad?

DC: Well, at first he had all the symptoms of COVID, but he tested negative. Then we discovered he had heart failure.

Me: How bad was it?

DC: Your dad was very sick. We didn't think he would make it the first night.

Me: So what happened to his heart?

DC: Well, his arteries are clear and there's no blockage. So it's hard to say. We did find 2 liters of fluid we drained from his lungs that we think is secondary to the heart. And there's no infection.

Me: So what caused the heart failure and fluid in his lungs?

DC: We still don't know.

Me: Could it have been the experimental vaccine he received about 36 hours earlier...?

DC: Oh, no.

Me: Why not?

DC: There's no evidence for that.

Me: And you confirmed my dad doesn't have diabetes, metabolic syndrome or any other comorbidities, correct?

DC: Correct.

Me: So what caused him to have sudden heart failure? And what explains why he is now doing so much better?

DC: We still aren't sure.

Me: And you're sure it wasn't the vaccine?

DC: Yes.

Me: How can you be sure?

DC: It's just not.

What has to happen for something to be considered, even as an association (not causation) an adverse reaction in the reporting data?

I'm sensing things are likely not being recorded or documented accurately in the medical community.

Primary

I cared for a previously healthy patient yesterday who came in with a massive intraparenchymal hemorrhage about 36 hours after receiving his second dose of the Pfizer vaccine. Poor guy had complete left sided hemiparesis and total unilateral left sided neglect. He was vomiting secondary to the increased intracranial pressure and all he kept repeating was "I'm ok, I'm ok, I got the vaccine. I got both doses of the vaccine." Intubated, ventilated, emergency ventriculostomy, mannitol, anti-seizure meds. His prognosis is abysmal. Was it related to the vaccine? Don't you dare ask that question!!!

Wonder if he will show up in the VAERS database. I

Keep up what you do. You are one of the only islands of sanity in all this.

Please don't publish my name. I'll lose my job within

APR 7 - got shot —————> **APR 7 - paralysis, seizures**

Tabatha Lauren McDonald, 24-years-old hospital employee from Texas, had chest pains, paralysis and multiple seizures 2 hours after her J&J injection. In her Tik Tok video she shared she had never had a seizure prior.

<  **Tabatha Lauren**
22h · 🌐

I'm finally awake and able to get my thoughts together. I received my Johnson & Johnson vaccine yesterday, about a hour later (left) arm pain started then turned into Severe chest pain and shortness of breath, I was able to get to the ER whom performed test and EKGs that were abnormal, then I started seizing continuously... I was transported to Baylor Dallas with Stroke precautions, 102 fever and seizures. As of this morning I am aware of my surroundings, able to carry on a conversation.. so far I have seized 3 times.... I am getting my EEG this evening and hopefully we start to get some answers. Thank you to all that have reached out and prayed for me, makes such a difference.

APR 8 - got shot —————> **APR 18 - Heart stopped / ICU**

Mandy Smith Long Term Recovery 
\$34,985 raised of \$30,000 goal

 **roadtripper00** Ready to see some homies!!! #vaxxed 🚗

 **roadtripper00** Please keep praying for my sweet Mandy. She is still in the ICU in critical condition. She is fighting and the doctors are doing everything they can for her. She has shown signs of improvement over the last 24 hours but we still have a long road ahead.

Super Bowl Champ Tells RFK, Jr.: 6 Months After Moderna Vaccine, Wife's Injury 'Progressively Worse'

Former Green Bay Packers player Ken Ruetters and his wife Sheryl led off Monday's news conference with Sheryl's experience of severe neurological reactions to the vaccine and their feeling of being "ghosted" by drug companies when they try to report these injuries.

Sheryl Ruetters: "My neurological symptoms have left me barely able to function some days, and the internal tremors create a type of fatigue that I have never experienced before. I am unable to fully participate in the activities I enjoyed before being vaccinated. My life has been negatively altered as a result of my vaccine. Will I get better? Will I develop Parkinson's or MS or ALS or another neuro-degenerative disease? I don't know, and my doctors can't tell me if they know. So what do I want? I want our neurological injuries to be recognized and acknowledged by the CDC and the FDA."

MAY 20 - gets 2nd shot → **MAY 21 - heart stopped, coma**

Masako Kikekawa updated her profile picture.
April 17 · 🌐

31

Farrah Karapetian
June 1 at 11:58 AM · 🌐

On Thursday, May 20th Masako received the second dose of the Moderna vaccine. Shortly after, she did not feel well. She experienced feeling light headed, dizzy and fainted. The next day still not feeling well, her father drove her to the hospital, she passed out and her heart stopped. The hospital conducted CPR for 20 minutes and was able to revive her. She has been unconscious since May 21st.

Meet Maddie, a 12-year-old who is participating in the Pfizer children's trial. She is currently unable to walk, eat, drink or urinate.

JAN 20 - got 2nd shot → JAN 21 - first symptoms appear

 Steph de Garay is with Patrick de Garay. March 9 · 🌐

Please pray for Maddie, she has been having a long list of neurological and gastrointestinal issues from a rare adverse reaction she had to the second dose from the COVID vaccine trial she is in. Right now she is in the hospital because of a bowel obstruction that was cleared and also being unable to swallow liquids or solids. She hasn't been able to eat or drink without throwing up for over a week. Tomorrow she has an Upper GI scheduled that she will have to swallow 6oz of liquid which as of right now seems impossible. We need this for the doctors to understand how her muscles are reacting. If she is unable to eat soon she will have to have an NG tube placed which she did not do well with earlier this week. I believe in prayer, please pray she is able to swallow liquids tomorrow so that her body can get the nutrients it needs and so the doctors can begin to figure out why her body is reacting this way.

On top of this she has extreme pain in her back, neck, head and abdomen along with numbness in her legs and arm. She has an MRI of her head and spine scheduled on 3/16.

Please pray for her to heal so she can be the energetic 12 year old who loves hanging with friends and learning at school. I can't stand watching her wither away each day.

NOTE: she has not been unblinded but I am 99.99% confident she got the vaccine and not the placebo since everything started about 12 hours after she got the second dose on 1/20/21 and has gotten progressively worse since then.

 Steph de Garay is with Patrick de Garay. Mar 9 · 🌐

****UPDATE TO NOTE****
Maddie was unblinded on 5/17/21 and DID RECEIVE THE PFIZER COVID VACCINE

Maddie's mother shared the following updates to her March 9 post

Circle of Mamas

12-Year-Old Suffers Severe Reaction in COVID Vaccine Clinical Trial

After seeing many specialists, MRIs, endoscopies, etc., Maddie finally got an actual diagnosis on March 12:

"So based on her physical symptoms and ruling out everything with all these tests, it's safe to say her diagnosis is Functional neurological disorder (FND). This is a medical condition where there is a problem with the functioning of the nervous system and how the brain and body sends and/or receives signals. We are thankful Maddie's team of doctors were able to give her a diagnosis with a name and a way to treat all of her symptoms. Most doctors do not even know about FND!

FND is usually triggered by something traumatic and most people have some pre-existing anxiety but not all do. It's no secret she has always been a type A personality, especially with grades (the apple doesn't fall far from the tree)!

Maddie's severe reaction to the second dose of the vaccine triggered it. We expected similar side effects to the flu shot. When she got her second dose not many people had even gotten their first dose so there wasn't the extensive list of symptoms that there is today. She was **one of the first people** in the study to have some of the symptoms she had which scared her and us. Then being told everything is normal time and time again when it clearly was not made her symptoms worse.

Her symptoms did continue and she was admitted to the hospital again. She is currently paralyzed from the waist down. April 11 update:

"Maddie was admitted to the hospital again on Friday. I'm not sure how long we will be here. She has significantly declined since she was discharged in March and is **unable to eat** without regurgitating her food. This caused her blood sugar to drop to 47 and she **lost about 15 pounds in a month**. Her blood sugar is stable and for now she has to be **fed through an NG tube** which she is having a hard time with. It was really bad for the first few hours and she threw up a bunch of stomach bile. She's been able to tolerate it a little better throughout the day and says it hurts her throat and she hates how she can feel the cold when they do her feeds or meds plus it makes her nauseous.

Maddie was also having **up to 20 blackouts/episodes a day** 3 weeks ago, they decreased after we weaned her off the Lyrica but she did have 2 today in the hospital. She also has **tremors in her arms**, especially when she is in pain and **random verbal tics**.

A new symptom is **chronic urinary retention (can't empty bladder)**. They do an ultrasound of her bladder if she hasn't gone to the bathroom in 16+ hours or if she has severe pain in her lower abdomen. If it measures over 500ml of urine they have to use a straight catheter.

She still isn't able to walk and she can't feel from her lower hips down. She has no leg movement against gravity with her legs. This time we are on the Neurology floor so the team of doctors that do rounds in the morning are all in that group and pull the other doctors in. We have met with the nutritionist, PT/OT and Child Life. Physical Medicine & Rehabilitation will be here tomorrow. She is also seeing a Speech Therapist and they are doing a video swallow test or FEES study for her swallowing/regurgitating problems. Please pray that she is able to tolerate the NG tube better tomorrow and her urinary retention resolves itself. And please pray the team of doctors/nurses/therapists come up with a plan to help her eat and walk again. We hate watching her suffer and I wish I could take it away from her.

Eric Clapton after COVID vaccination: 'I should never have gone near the needle'

May 12, 2021

Mordechai Sones

In February this year, before I learned about the nature of the vaccines, (and being 76 with emphysema) I was in the *avant garde*. I took the first jab of AZ and straight away had severe reactions which lasted ten days, I recovered eventually and was told it would be twelve weeks before the second one...

About six weeks later I was offered and took the second AZ shot, but with a little more knowledge of the dangers. Needless to say the reactions were disastrous, my hands and feet were either frozen, numb or burning, and pretty much useless for two weeks, I feared I would never play again, (I suffer with peripheral neuropathy and should never have gone near the needle.) But the propaganda said the vaccine was safe for everyone...

Then I met a member of this group, who counselled me to be careful and to have a look at what goes on with you guys...

I felt like a veil had been lifted, that I was no longer alone, that it was okay, in fact essential, to hold on to my intuition and follow my heart...

I continue to tread the path of passive rebellion and try to tow the line in order to be able to actively love my family, but it's hard to bite my tongue with what I now know...

I've been a rebel all my life, against tyranny and arrogant authority, which is what we have now, but I also crave fellowship, compassion and love, and that I find here...

EC*

Well-known actor and economics commentator Ben Stein posted a YouTube video describing horrific reactions to his second Moderna shot, including 'extreme irrational thinking.' You can see a worrisome decline in his health in Episode 153 of his show "The World According to Ben Stein" where he says he has seen three doctors since his shot but still feels horrible and has no energy. His doctors have offered no solution.

32 year-old-Canadian with NO allergies almost dies from allergic reaction to shot

P.E.I. woman hospitalized over 'extremely rare' COVID-19 vaccine allergy shares her story

Sara Fraser · CBC News · Posted: Apr 06, 2021 6:00 AM AT | Last Updated: April 6

Toni Lannigan, shown in an engagement photo with her fiancé, says she had a serious allergic reaction to the Pfizer BioN-Tech vaccine. (Tracy Stewart)

Last week, Toni Lannigan's excitement over getting her COVID-19 vaccine turned into a panic.

The 32-year-old had no known allergies, but sometimes felt slightly unwell after annual flu shots, so staff at the King's County Memorial Hospital in Montague, P.E.I., flagged her to wait 30 minutes after her Pfizer-BioNTech shot instead of the usual 15, to make sure she would be all right.

It didn't take that long before she became very ill. The roof of her mouth itched, her tongue swelled and she became confused.

"I don't remember everything, but I remember looking around and seeing the nurses so concerned," she said.

Luckily, the emergency department was just steps away and staff rushed her there, where she said her heart began to race, her blood pressure dropped dramatically and she began having sharp pelvic pains.

She remembers being treated with epinephrine, a drug used to treat severe allergic reactions, and starting to shake uncontrollably. An ambulance took her to the Queen Elizabeth Hospital in Charlottetown, where she was admitted to intensive care.

Back home in rural Montague, she said the vision in one eye is still severely blurred — her doctor is keeping an eye on that — and she is weak, extremely nervous and jumpy. Her head aches, she has no appetite and she isn't sleeping well.

"Do I feel like myself? Absolutely not. I'm a very bubbly kind of girl — I don't feel that. I feel very nervous or on edge, and I don't know why," she said. "My nerves are shot."

Lannigan is glad her vaccine was administered at a hospital, not one of P.E.I.'s mass clinics. "Would I have made it to where I needed to be?" she wondered, if she had gotten the needle somewhere else.

"I couldn't really get any answers as to why that happened. And I still don't have any answers," Lannigan said. She would like to know what vaccine ingredient caused her reaction, and why.

'AstraZeneca vaccine left me with blood clots in my lung' - Stoke-on-Trent mum, 35, speaks out on jab

Beckie Wilson had her first dose of the Oxford-AstraZeneca vaccine on March 11 but doctors discovered blood clots in her lung less than three weeks later

A Stoke-on-Trent mum claims to have suffered blood clots in her lung after having the first dose of the Oxford-AstraZeneca vaccine.

Beckie Wilson had the jab on March 11 and says she soon started to experience symptoms such as shortness of breath.

The mum-of-two, from [Burslem](#), said: "I went and had the vaccine through work. I couldn't do much and I was getting out of breath just moving around.

"I went to the doctors about a week later and was put on a course of antibiotics, but when this had no affect they sent me for blood tests and a CT scan at Royal Stoke.

"The results from those came back last week and I received a phone call asking me to go in where the consultant was waiting for me.

"I rushed there and the consultant told me I have got quite a few blood clots in my right lung.

"It's a really dangerous situation to be in. You can die from these blood clots.

"The hospital has now put me on blood thinning tablets for three months to try to get rid of the clots and I've been told to stay off work. Without the blood thinning medication I'd probably be dead.

She says she has now been advised by her doctor not to have the second dose.

She said: "The hospital said the blood clots were caused by the vaccine.

"They explained that you can get blood clots through not moving around or through having an operation, but other than that the only other thing was the vaccine.

"The doctor has advised me not go for the second vaccine because it could lead to more blood clots.

"I've never had any issues with clots before."

Australia's health minister in critical condition 1 day after shot

Health Minister in Critical Condition just one day after receiving Covid Vaccine

BY THE DAILY EXPOSE ON MARCH 9, 2021 • (22 COMMENTS)

Listen Now

Australia's Health Minister Greg Hunt has been admitted to hospital and is said to be in a serious condition just one day after receiving a dose of the Oxford / Astrazeneca Covid vaccine.

Federal Health Minister Greg Hunt was hospitalized for 4 days for cellulitis (which is a recorded side effect from the trials)

The Pineapple Express

6 m · 🌐

BREAKING: HMAS Sydney is out of action due to approximately 80% of the ship company going down with severe illness straight after taking the COVID-19 vaccine. The exact same illness that Greg Hunt got after his vaccination.

It is believed eight members are currently in ICU and our thoughts and with them in these moments of uncertainty.

Woman's sudden paralysis linked to Johnson & Johnson

CBS5AZ.com

"I know my body and I knew something wasn't right," she said. What is Guillain-Barre? Hear one woman's fight with the rare disorder.

HOUSTON, Texas (KTRK) -- A Houston woman spent 22 days in the hospital suffering from a rare disorder known as Guillain-Barré that she said her doctor determined was brought on by her COVID-19 vaccine.

9 people vaccinated against COVID-19 in Arizona reported rare nerve disorder

PHOENIX (3TV/CBS 5) – Nine people who received a COVID-19 vaccine in Arizona reportedly have experienced a rare condition in which the body's immune system attacks the nerves.

It's called Guillain-Barré syndrome, and the first symptoms are usually weakness and tingling in the feet and hands, according to [MayoClinic.org](https://www.mayoclinic.org). "These sensations can quickly spread, eventually paralyzing your whole body," the site explains. "In its most severe form Guillain-Barré syndrome is a medical emergency. Most people with the condition must be hospitalized to receive treatment."

Poway mother develops rare nerve disorder after receiving J&J vaccine

FDA warns of heightened risk of rare disorder

In early April, 46-year-old Kelly Francis said she received Johnson & Johnson's COVID-19 vaccine.

Francis suffered no immediate side effects, but a week later, her feet started to hurt, and then her legs. Days later, she woke up with intense neck pain.

"I was walking back to bedroom. I fell and was completely paralyzed from the waist down," said Francis.

In mid-May, an MRI and spinal tap revealed a diagnosis, a rare neurological condition called Guillain-Barre Syndrome (GBS),

where the immune system attacks nerve cells, causing muscle weakness and in extreme cases, paralysis.

"My neurologist said he believed 100% that it was from the Johnson & Johnson vaccine, and he was reporting it to the proper officials," said Francis.

"I was angry. We were told to get this to prevent COVID, and I end up with something that has long-term consequences," said Francis.

Olympic Games: Fuglsang believes his Tour de France was wrecked by Covid vaccine

Speaking to *Cyclingnews* during the Tour, the 36-year-old said that his Tour legs were badly affected by the side effects of his second COVID jab and that his pre-Tour form was quickly wiped out.

“Things progressed pretty quick. So, I have this week’s long neurological decline, and no one knew what was going on. I called the test clinic several times, finally two days later they had me come in and they did a neurological exam and they said, ‘oh it looks like you have MS, so you probably need to get that checked out,’” Dressen said.

She said her symptoms continued to worsen, and just before Thanksgiving, she said her legs stopped working, sending her to the emergency room. However, after running several MRI’s, cat scans, and lumbar punctures, no one could tell her what was wrong.

She spent months teaching herself how to walk, eat, and form sentences again – all while she traveled near and far to try and get some answers.

“The hospital didn’t know what was going on...none of the neurologists that I saw knew what was going on...I called the test clinic several times and they had no idea what was going on,” Dressen said.

AstraZeneca Covid vaccine linked to rare neurological disorder in India, UK

MEDPAGE TODAY*

Two Shots, Two Paralyses After COVID Vaccine

A man experienced two discrete contralateral facial palsies, one after each dose of the Pfizer-BioNTech vaccine.

The first episode developed 5 hours after the 61-year-old man received the first dose of the vaccine, reported Abigail Burrows, MBBS, of Royal Surrey County Hospital NHS Foundation Trust in Guildford, England, and colleagues.

The second occurred 2 days after he received the second dose and was more severe, they wrote in *BMJ Case Reports*. On both occasions, the patient was diagnosed with Bell's palsy.

Two studies: Covid-19 vaccines trigger Graves' disease in some female health care workers

DATED: JULY 11, 2021 BY SHARYL ATTKISSON — [LEAVE A COMMENT](#)

- Two medical reports describe cases of five previously healthy female health care workers who developed the autoimmune disorder Graves' disease shortly after Covid-19 vaccination.
- Two of the women were breastfeeding when diagnosed.
- Graves disease has previously been connected to human papillomavirus (HPV) vaccine, flu shots, and hepatitis B vaccines.
- Autoimmune/inflammatory syndrome induced by [vaccine] adjuvants (ASIA) was first described a decade ago.
- ASIA is triggered by several adjuvants, substances used in vaccines to enhance the antigen-specific immune response.

The researchers conclude: "Our patients met the diagnostic criteria for ASIA [autoimmune/inflammatory syndrome induced by adjuvants], they were previously healthy, were exposed to an external stimulus (vaccine), developed manifestations of AIEDs, and tested positive for autoantibodies. These cases represent an example of the diversity of clinical manifestations of vaccine-induced autoimmune conditions."

Will you trade potential facial paralysis for a 99.7% survival rate?

The coronavirus vaccine developed by Pfizer and BioNTech has apparently caused a number of side-effects not anticipated by the producers, a department manager at Sheba Medical Center in Tel HaShomer said Tuesday.

The new side-effects range from paraesthesia – a nerve condition causing a tingling sensation or ‘pins and needles’ – to facial nerve paralysis. “When we noticed this and spoke with [the company], they started to get reports about this,” said Rahav.

“At the beginning, they said that it was just hysterical women, but it doesn’t seem that way, because we’re seeing this with men as well.”

Interesting that Pfizer ignored the initial reports of this side effect because... "hysterical women."

Our first warnings came from front line workers sharing their injuries on social media in early 2021

This is what his wife, Jennifer, wants you to know about their experience...

"The last 8 days have been incredibly challenging. I had little interest in sharing the details of our lives publicly but through our experience it has become clear that information to help those suffering from the Covid Vaccine is minimal. Public groups to share experiences with the vaccine have been actively deleting posts describing my husband's experience as it doesn't follow the message they want you to hear.

"Before jumping in, I'd like clarify that my husband is a frontline worker in healthcare and has been serving his community in various ways for 10+ years. I'd also like

to say thank you to every single individual who has reached out to my husband and I to offer comfort and support. We appreciate you.

"On December 26th my husband received the Moderna Covid Vaccine. Shortly after, he developed a slight fever and general exhaustion. The following day came with incredible challenges that resulted in my husband being bed ridden. Whole body exhaustion, incredibly high fevers, chills, headaches, nausea. He could barely pick his arm up...

"Enter Monday, 12/28. On 1,000mg of Tylenol and 800mg of Motrin (ibuprofen) he was throwing temperatures higher than 104. I brought him to a local emergency room where he was told to treat his symptoms like Covid until proven otherwise... they gave him IV fluids and sent him on his way...

"While waiting for his ultimately negative results (he does not have Covid) I called numerous urgent care centers who refused to see him, on-call doctors for ECHN who refused to provide medical advice over the phone to an ECHN patient (isn't that their job?! Said doctor also informed me 104 fevers were not dangerous and the ice packs and cold cloths we were placing on his body were "only going to make me feel better and won't do anything for him".) We were left alone with minimal guidance from professionals in the field my husband has been working in for over a decade...

"You may be thinking, why didn't you call the vaccine hotline? We did. It was our first call. They picked up and said to report symptoms online for tracking purposes and then hung up. There was no guidance for treatment, no recommendations for who to seek help from... nothing more than "I hope you feel better".

"Fast forward a bit. Symptoms continued to worsen and I ultimately brought him to a privately held highly regarded emergency room in Hartford CT for further care. Without sharing specifics, I'll share that my husband was and continues to be so incredibly ill, the hospital has been testing every potential cause for his symptoms which has included 20+ tests and counting:

- Countless X-rays,
- Multiple Ultrasounds,
- Spinal taps for meningitis, and
- Regular ongoing blood work for blood bacteria, to name a few.

UPDATE 1/8/2021

All - Over the last week, my husband and I have received hundreds if not thousands of messages, texts, calls and emails expressing empathy and sympathy for our living nightmare. Many of these reach outs came from family and friends. Many more came from tens of thousands of strangers simply passing along healing prayers and thoughtful words.

- Karl (my husband) and I are indeed REAL. Once we saw my initial post take off, we thought it best to lock down our personal accounts for privacy. Not that anything is truly private on social media.
- He and I are in our mid/late 20s and partake in active sports like walking, hiking, skiing and wake-boarding regularly.
- My husband has no underlying conditions, no chronic conditions, and
- Given his role as a first responder, my husband was regularly tested for COVID leading up to his vaccination and was tested numerous times after falling ill. My husband did not have and continues to be Covid free.
- Yes, it was officially determined that his illness was directly linked to the vaccine.

Our objective in sharing my husband's very real experience with Moderna, the healthcare system and "all of the things" was simple -> share so that others can make more informed decisions for themselves and their families.

We hope in some small way being open and sharing these personal details truly helped you form a more comprehensive understanding of the vaccine and its potential symptoms/risks.

After nearly 11 days of aggressive illness, 6 days and 5 nights in a privately held hospital without visitors, raging potential seizure inducing fevers, 35+ tests including regular blood draws, chest x-rays, liver ultrasounds, spinal taps, forced isolation, and a hospital bill I'm sure is five miles long....

Before I start this post I am in no way feeding into conspiracies, lies etc this is from true experience and i am currently having to write this with one hand. Today I went in for my pfizer covid 19 vaccination because i work in a care home and thought it would be in best interest of my residents to have it i was offered a choice! before i had the jab i was asked if i had any allergies which i stated a mild egg allergy so after my jab i was told to stay for a 30 minute observation to see if the vaccine caused a anaphylactic reaction. I was fine apart from a mild headache i put that down to not eating properly when i got home i decided to go for a nap which lasted an hour little did i know everything was going to get worse. When i woke up i could barely feel my right side (i was vaccinated in my right arm) and could barely string a sentence together i had slurred speech and little energy. as time went on i lost complete sensation in my right arm and leg and my headache became an excruciating pain in my neck aswell, my mum suspected something was wrong and called 111 for some advice as we weren't sure if these are normal side effects. When speaking to 111 they sent an ambulance which came in 10 minutes, i was assessed and sent to the royal hospital i was then sent for a CT scan and admitted as a potential stroke bearing in mind i am 19 years old. the CT scan was clear but there was no explanation for the loss of feeling in my body I am now on a stroke ward despite no sign of a stroke to monitor if my feeling comes back and to see if i can walk again.

Thank you all for the text, calls and messages!!!

6 hours later and my reaction is fading. Ive had IV meds to calm my system.. Ive went Afib, tachycardia (both confirmed by ekg), red, skin on fire, swollen eyes and felt plain miserable!!!

I should have listened to my first thought and passed on the vaccine.. for some its great for some its NOT! Dont let the media... people.. or anything talk you into something you have doubts on.. stick with your gut and go with it.... only you know your body!

As far as the 2nd one.. NOPE! Today has been horrible!

Just for note this was my first dose of the Pfizer vaccine.. I do have underlying medical conditions. POTs, MCAS, and Small fiber Neuropathy all a form of Dysautonomia.. but was told that the vaccine is better then Covid (which our house already had and recovered well from) .

My Pfizer Covid vaccine story....

I have waited to post my story out of fear of negative comments, therefore I'm asking you to please don't leave a negative comment because this is MY story. Thanks

I was excited to be chosen to receive the Pfizer Covid 19 vaccine. I have been a nurse for 20 years and love what I do for my community. I felt that everyone in my life, including my patients, family as well as myself would benefit if i receive the vaccine. After all what could be so bad about a vaccine? I believe vaccines are good. I'm healthy, No health conditions and No allergies.

On 12/18/20 around 12:30 pm, I go to the designated station pull up my right sleeve and receive the injection. I think, "okay, that wasn't so bad" and I leave to go to the waiting area for 15 minutes to make sure no reactions occur.

As I was in the elevator going down, one floor, to the seating area, I felt some dizziness. I think to myself that I just stepped wrong in the elevator. I get to the floor and was greeted from a nurse that asked me to wait for a minute to be seated. I then felt a big wave of dizziness over my body. I asked if I could sit now as I was feeling really dizzy and my legs feel like noodles. The nurse kindly said yes, sit anywhere you'd like. I sat down and she asked how I was feeling? I said kinda dizzy and weird but I don't think it's anything. A sweet girl sitting across from me said to me, "it's not in your head, I feel the same thing." We looked at each other with a bewildered

I go to the back room and blood pressure showed 187/100 and pulse 120. I was asked by all personnel if I had HTN, allergies or allergies to the flu vaccine. I said No I don't have any allergie or HTN. The fullness in my throat quickly escalated to feeling like I was being choked with extreme heat inside my body that started at my throat and waved down to my abdomen and back up. That's when I got an IV, Benadryl, solumedrol and my first injection of epinephrine. Now my blood pressure and heart rate was even higher and I start shaking uncontrollably due to the epi. I stare at the ceiling and I feel this is surreal and not me, I still don't quite realize what's happening until the medical person standing on my left side asks the physician on my right, she's having an anaphylactic reaction, isn't she? The physician on my left says, "yes, she is." The physician says to me your O2 sats are good, therefore you are breathing, so try not to be scared and keep talking to me. He holds my hand, telling me not to worry that he's got this and I'm going to be fine. He then says your voice sounds raspy. Can you try to talk louder? I could not talk any louder. As my fingertips turn blue, tears start coming down from my eyes, and my symptoms get worse. I began feeling like I was drowning. I tell him, it's getting worse and i feel like I'm drowning! That's when I got the second epinephrine injection. My body continued to shaking but even worse. Then Finally, but slowly, the strangulation halted and my symptoms started getting better. It was going away! I could breath a little better now and my voice starts getting stronger. Once I was out of danger, I realized I had been there for an hour, as I was wheeled to a hospital bed to wait for my body to regain normalcy again.

It was 8 pm when I finally left the hospital. The other girl that had the anaphylactic reaction like me went to ICU so I felt lucky to be going home. I

If you are considering the vaccine for covid..... the MODERNA.... I would advise against it! I'm in bad shape! Everyday getting worse and I'm not getting help or answers! I'm scared to death to say the least! And to find someone willing to attempt to figure this out hasn't been very successful! I went to 2 hospitals today, walked out of deaconess and went to St Vincent. No answers there either. They say let's see a neurologist(who knows when they can see me) yesterday my tongue began to spasm and it hasn't quit. Today my whole body has been convulsing all day! They sent me home!! I'm posting 2 videos that are quite embarrassing if you know me but I want you to see what's happening to me!
Just please pray for me

BAKERSVILLE, NORTH CAROLINA — Ms. Kristi Simmonds has been a registered nurse since 2007. Her hard work and dedication to the profession led to a clinic manager position at Kindred at Home Care Services in October. Ms. Simmonds wanted to lead by example. She received the Moderna mRNA shot on January 19, according to her Facebook page. The goal was to protect her patients and co-workers, while also demonstrating that the shots are safe. She is now warning people to exercise due diligence before getting the jab.

Ms. Simmonds throat and tongue swelled up so much that she could barely breath. She went to the hospital on January 21. Doctors prescribed her Benadryl and sent her home. Ms. Simmonds rested for four days and returned to work, thinking the worst was over. Her whole world changed that night when she got home. Ms. Simmonds started having uncontrollable convulsions and muscle spasms.

32-Year-Old Mexican Doctor Suffers Seizures and is Paralyzed After Receiving the Pfizer Experimental Vaccine

Dr. Karla Cecilia Pérez Osorio (right).

The [Mexican Press](#) is reporting that a 32-year-old female doctor in Coahuila has suffered seizures and become paralyzed after receiving the Pfizer experimental COVID mRNA vaccine on December 30, 2020.

Dr. Karla Cecilia Pérez Osorio reportedly was working as an internist at the General Hospital of Zone No. 7, in the municipality of Monclova. She was subsequently transferred to the High Specialty Medical Unit No. 25 of the IMSS, in Monterrey, Nuevo León.

She was reportedly evaluated by a neurologist and diagnosed with transverse myelitis, a known side effect of vaccines, and specifically of the COVID experimental mRNA vaccines as this injury was observed in some of the vaccine trials of the various COVID19 experimental trials being conducted around the world.

Hamilton PSW says allergic reaction to COVID-19 vaccine led to fainting, seizures and CPR

Bobby Hristova - CBC News - Posted: Dec 30, 2020 11:56 AM ET | Last Updated: December 30, 2020

Deborah Tilli, 27, says she accepted the possibility of death while suffering a severe allergic reaction after receiving the COVID-19 vaccine. She says she feared her two daughters, ages seven and four, would be left without a mother. (Submitted by Deborah Tilli)

Tilli says the paramedic checked her vitals and noticed her heart rate was high. She received a Benadryl shot and it seemed to work for a few minutes. But the symptoms returned and worsened, she says. "The supervisor from the paramedics was there and he just said 'OK, let's give her the EpiPen,'" Tilli said.

"Within a minute, I just said, 'Something doesn't feel right in my body,' and I remember just passing out and leaning over to the right."

Dave Thompson, superintendent of the local paramedic service, confirmed to CBC News that Tilli was taken to hospital in stable condition.

Tilli says when she woke up, she was told she suffered seizures and needed CPR for a brief period. She doesn't remember much during the reaction, but says one moment sticks out — accepting the fact that she could die.

"There was a moment where, I don't want to say I gave up, but I was just like 'It is what it is.' ... [Days later] when I was in bed the other night, I was thinking, 'What if I left my two girls without a mother?'" Tilli said.

Even the very young are experiencing deadly reactions

I'm a 21 year old CNA at a nurs home i was working and completely healthy i got told to go get the vaccine (from peer pressure bc i didn't want it) talk to a lady told her i had seizures in the past i had a cold and have allergies to shellfish amoxicillin and penicillin (SHE CROSSED THEM OFF AND PUT N/A! ON MY CONECENT FORM!) I took the vaccine at the 12:02 on Jan 8 i walk around and made my way to my seat and immediately felt my heart racing getting hot and dizzy i tried everything to calm my heart down and nothing worked i put a cold water bottle on my head and watched my Apple Watch to see how high my heart rate was it was 176 when i checked that's when i new something was wrong i stood up to get help and i just collapsed. I couldn't move after my hands and legs seemed paralyzed my left side of my face was all pins and needles feeling. They say i had two seizure like eps i was throwing up and screaming in pain. I then had two epi pens in the left leg i couldn't feel it at all Bc my legs couldn't feel anything my legs where completely numb and well paralyzed the emts came i was extremely tired and weak and hurt ER i noticed that my feet where purple we tried to plop them up they would change in color back to normal but still freezing cold and would turn purple right when i put them down. It's come to the point of painful and pins and needles feeling is worse it's been worse on the left then the right the whole time i can't walk without support and my walker and it's very painful. I went to Boston hospital to get my feet checked out since they are purple and now i need to get a biopsy done to my feet. I reported it to Pfizer and they will be calling my in the next few days i was told

Some of these vaccine injuries will be life-long and devastating

Hundreds Sent to Emergency Room After Getting COVID-19 Vaccines

BY ZACHARY STIEBER | January 5, 2021 Updated: January 5, 2021

Thousands of people self-reported being unable to work or perform daily activities, or required care from a health care professional, after getting one of the doses from the first tranche.

The FDA's Adverse Event Reporting System hasn't been updated to include data for the last quarter of 2020 yet.

Schools around the US have been forced to close because teachers are unable to work after the shot

A message from CUYAHOGA FALLS CITY SD

Good evening Black Tiger Families, this is Dr. Nichols,

Unfortunately, as a result of the residual effects of the vaccination offered last Friday, many of our teachers are still struggling with the side effects this evening. As a result, we will not have the number of substitute teachers available to cover classrooms across the district. Thus, I will be declaring Monday, March 15 a calamity day for Cuyahoga Fall City School District. It is with great dismay that this is the case, especially for our

Olentangy Schools
@OlentangySD

Due to a substitute shortage from staff receiving the COVID-19 vaccine, the following schools will be closed today, March 8.

CONCORD, NH — The Concord School District abruptly canceled school on Monday after a flood of teachers and other district staffers called in sick one day after many received the Johnson & Johnson COVID-19 vaccine.

NO SCHOOL Monday, February 8th.

Dear Parents, the Fairless school staff received their COVID vaccination on Saturday and many have developed side effects and become ill. I am not able to operate school safely tomorrow with this many staff out. Fairless schools are closed for Monday, February 8. We plan to resume school on Tuesday.

On Wednesday, March 17th, more than 1,100 staff members received their second COVID-19 vaccine. While we feel fortunate to have our staff vaccinated, we have had an inordinate number of bus drivers, classroom teachers, building administrators and support staff report that they are too ill to report to the buildings on Friday, March 19th.

Due to this it is necessary to close all Willoughby-Eastlake buildings on Friday, March 19th. Friday will be an asynchronous learning day for all students.

Kaneland School District 302 in southwestern Kane County was forced to cancel classes Thursday after more than 100 teachers and staff members called in sick following their second dose of the COVID-19 vaccine.

As of Wednesday night, approximately 45 staff members had been signed out as ill, but by 5 a.m., that number went up to 125, according to Dr. Todd Leden, superintendent of the school district.

Iowa City Press-Citizen

West Liberty classes canceled Monday after staff reports vaccine side effects too severe to teach

Classes in the West Liberty Community School District were canceled Monday after more than 40% of the district's staff reported experiencing side effects too severe to teach after receiving the second round of vaccinations against COVID-19 Saturday.

Italy bans AstraZeneca batch following two deaths in Sicily: source

BY REUTERS STAFF
MARCH 11, 2021 AT 6:07 AM · 1 MIN READ

ROME (Reuters) - Italian health authorities have ordered the withdrawal of a batch of AstraZeneca coronavirus vaccine following the deaths of two men in Sicily who had recently been inoculated, a source close to the matter said on Thursday.

Are we just now recognizing the danger of PEG? After the rollout?

Suspicious grow that Pfizer's COVID vaccine nanoparticles trigger allergic reactions

The U.S. National Institute of Allergy and Infectious Diseases (NIAID) convened several meetings last week to discuss COVID-19 shot allergic reactions with representatives of Pfizer and Moderna, independent scientists and physicians, and the Food and Drug Administration (FDA), reports *ScienceMag*.

The magazine, whose COVID-19 reporting is supported by the Pulitzer Center and the Heising-Simons Foundation, said severe allergy-like reactions in at least eight people who received the COVID-19 vaccine produced by Pfizer and BioNTech over the past 2 weeks may be due to a compound in the packaging of the messenger RNA (mRNA) that forms the vaccine's main ingredient, scientists say. A similar mRNA vaccine developed by Moderna, which was authorized for emergency use in the United States on Friday, also contains the compound, polyethylene glycol (PEG).

"PEG has never been used before in an approved vaccine, but it is found in many drugs that have occasionally triggered anaphylaxis—a potentially life-threatening reaction that can cause rashes, a plummeting blood pressure, shortness of breath, and a fast heartbeat. Some allergists and immunologists believe a small number of people previously exposed to PEG may have high levels of antibodies against PEG, putting them at risk of an anaphylactic reaction to the vaccine," the paper noted.

Meanwhile, an Israeli law firm has sent a letter Health Ministry Special Events coordinator Firas Hayek with a demand to reveal all [vaccine injuries](#) and damages before Israel can pass legislation regarding mandatory vaccination.

The Law Firm of Sachs, David, Price, and Hegdish wrote: "Testimonies from within society have accumulated of severe incidents that necessitated emergency medical care for those who vaccinated, evacuation to the emergency room, hospital stay, [or death](#) within a close time frame from the vaccination.

The COVID-19 vaccine, however, according to VAERS, [shows 1 death reported per 35,000 shots or 10,000 completed vaccinations \(so far\), a 300-900 greater likelihood.](#)

As of June 21, 2021 there are now **5,118** reports of Tinnitus post-vaccination in the VAERS database (U.S. only records)

Since this is a known side effect from the trials, were recipients warned about this potential injury?

Tinnitus reports grow amid COVID-19 vaccinations

By Brian Buntz | March 11, 2021

A handful of patients in Johnson & Johnson's Phase 3 COVID-19 clinical trial complained of tinnitus, or ringing in the ears.

After reporting on the subject, we've received a steady stream of reports from Moderna and Pfizer-BioNTech vaccine recipients who experienced tinnitus.

The U.S. Vaccine Adverse Event Reporting System (VAERS) database cites 152 reports of tinnitus among 25,072 COVID-19 recipients of vaccines from Pfizer-BioNTech and Moderna. The database also has 11 reports of sudden hearing loss and 39 reports of hypoacusis (loss of hearing acuity).

A U.K. database cataloging adverse events related to AstraZeneca and Pfizer-BioNTech vaccines also lists a number of cases of tinnitus. In a summary of adverse reaction reports for the 54,180 recipients of the AstraZeneca vaccine from Jan. 1 to Feb. 28, there were 320 tinnitus reports. For the Pfizer-BioNTech vaccine, there were 196 tinnitus reports among 33,207 recipients in the same time frame.

April 12 - "I was really concerned about why all of a sudden I was forgetful, disoriented and just not feeling myself. Feeling like I was in a fog and really wanting to get out of that fog," Jovita said. Later that evening as she walked through the grocery store parking lot, she realized it was more than just not feeling well. "It was a blessing in disguise that I almost passed out walking into Publix," Jovita said. "I was walking. I remember walking across the parking lot and feeling like I wasn't going to make it to the door. I was almost like walking in quicksand." A scan of her brain revealed two small masses.

Writer suffered blood clot on lung after AstraZeneca jab and fears Covid vaccine to blame

Rhys Trimble, 43, from Gwynedd suffered a coughing fit so severe his car windscreen was covered in blood droplets

A man claims he developed a blood clot on the lung after receiving the AstraZeneca jab.

Rhys Trimble, 43, from Bethesda, Gwynedd started coughing up blood after receiving his first Covid vaccine jab.

Two weeks after receiving treatment for the pulmonary embolism at Ysbyty Gwynedd, Mr Trimble, who is an author, poet and training to be a teacher, is still short of breath - and is still expelling blood.

Mr Trimble says neither he, nor his GP have yet to receive a discharge letter to indicate whether his illness was related to the AstraZeneca (AZ) vaccine he received on April 22.

FEB 4 - gets shot

FEB 10 - paralyzed

Scott Homolka was an avid outdoorsman who was paralyzed within 6 days of his shot and has spent 82 days in the hospital.

On February 4, 2021, Scott received his first COVID-19 vaccine shot. Two days later on February 6, Scott began to experience extreme back pain. He went to the doctor, who prescribed muscle relaxers and pain meds. Just a few, short days later, on February 10, Scott couldn't walk. While getting up one time, his legs gave out and he fell to the ground. Someone who walks 11,000 steps per day at work suddenly couldn't walk. Scott and Mary immediately contacted Scott's doctor, who wouldn't approve Scott for an immediate MRI or emergency care.

By February 13, Scott still couldn't use his legs. Three days of not being able to go to work, not being able to take himself to the bathroom, not being able to get his own food, not being able to play with his dogs or take them for a walk...not being able to move anywhere on his own. This is also three days of Mary being out of work to help care for Scott at home.

Finally, after no advancement with the doctor, Scott went to the Emergency Room where he was diagnosed with Guillain Barré syndrome (GBS), which was triggered by his COVID-19 vaccine. That's right...the very thing that everyone is (understandably) hailing as the path forward. And for many people it is. But for Scott (and Mary), it was the opposite.

Frontline worker unconcious, vented after shot reaction

Soccer star Christian Eriksen 'was gone' after on-field cardiac arrest, doctor says

The original match was suspended after Eriksen keeled over.

Fans and players looked on in shock as the 29-year-old received

CPR and other emergency treatment.

00:18 / 00:51

Christian Eriksen, the Danish soccer star who collapsed on the field during a European Championship match Saturday, suffered a cardiac arrest and "was gone" before he was resuscitated with a defibrillator, his team's doctor said.

Eriksen, 29, a midfielder, was stable and "continues to be hospitalized for further examination," the Danish Football Union said Sunday in a [statement](#) posted to Twitter.

Drama about Bayern basketball players: Paul Zipser had an emergency operation

by Mathias Müller

Ten days ago, at the last semi-final match between the Bayern basketball team and Ludwigsburg, Paul Zipser and his team walked into the Audi Dome as normal. However, the 27-year-old was no longer used this Friday. He felt limp and his knee pinched after a long season.

The diagnostics got rolling on Saturday after the Ludwigsburg game thanks to the quick action of the Munich medical team led by team doctor Dr. Sebastian Torka. Zipser's dizziness symptoms, which also occurred in the morning, made the Bayern doctors prick up their ears because they knew that the Heidelberg man had been vaccinated against corona with the Johnson and Johnson vaccine - a vector vaccine with the same mechanism of action as the Astrazeneca vaccine. And this is suspected of causing so-called cerebral vein thrombosis in rare cases. So the FCBB docs urged a quick CT scan.

Mother's legs erupt in blisters 'after getting AstraZeneca's jab'

Luke Andrews Health Reporter For Mailonline 10 hrs ago

A mother has claimed her legs erupted into painful blood-filled blisters that 'merged together' after receiving AstraZeneca's coronavirus vaccine.

Sarah Beuckmann, from Glasgow, said she suffered flu-like symptoms after getting her first dose in mid-March — a very common side-effect. But the 34-year-old began to feel a tingling sensation in her legs just a week later and noticed a rash flaring up around her ankles.

She called the GP to arrange an appointment that morning, but by the afternoon her skin was already breaking out into blisters.

The mother-of-one was rushed to Queen Elizabeth University Hospital, and claimed at one point she feared her legs might have to be amputated.

Ms Beuckmann spent 16 days in hospital, with blisters also appearing on her hands, face, arms and bottom. She was discharged to recover at home but is wheelchair-bound because she struggles to walk due

to the bandages on her legs and blisters on the soles of her feet.

Herpes infection possibly linked to COVID-19 vaccine, study says

By Jackie Salo

April 20, 2021 | 9:29am | Updated

Herpes infections may be a side effect of a COVID-19 vaccine, experts have revealed.

Scientists in Israel identified six cases in a new study of patients developing a skin rash known as herpes zoster — or shingles — after receiving the Pfizer vaccine, according to a study in the *Rheumatology journal*.

Herpes zoster starts off as a small, itchy skin rash, but if left untreated, it could cause nerve damage and pain, the Jerusalem Post reported.

Out of 491 patients, six people or 1.2 percent experienced the infection, researchers said.

RHEUMATOLOGY  British Society for Rheumatology

Herpes zoster following BNT162b2 mRNA Covid-19 vaccination in patients with autoimmune inflammatory rheumatic diseases: a case series FREE

Published: 12 April 2021

The prevalence of HZ was 1.2% ($n = 6$) in patients with AIIRD compared with none in controls. Six female patients aged 49 ± 11 years with stable AIIRD: rheumatoid arthritis ($n = 4$), Sjogren's syndrome ($n = 1$), and undifferentiated connective disease ($n = 1$), developed the first in a lifetime event of HZ within a short time after the first vaccine dose in 5 cases and after the second vaccine dose in one case. In the majority of cases, HZ infection was mild, except a case of HZ ophthalmicus, without corneal involvement, in RA patient treated with tofacitinib. There were no cases of disseminated HZ disease or postherpetic neuralgia. All but one patient received antiviral treatment with a resolution of HZ-related symptoms up to 6 weeks. Five patients completed the second vaccine dose without other adverse effects.

Conclusion

Epidemiologic studies on the safety of the mRNA-based COVID-19 vaccines in patients with AIIRD are needed to clarify the association between the BNT162b2 mRNA vaccination and reactivation of zoster.

MEDPAGE TODAY*

New Side Effect From mRNA COVID Vaccines?

— Surprise finding in Israeli case series

by Nancy Walsh, Contributing Writer, MedPage Today
April 15, 2021

At two centers in Israel, there have been six cases of herpes zoster developing shortly after administration of the Pfizer vaccine in patients with disorders such as rheumatoid arthritis since December 2020, according to Victoria Furer, MD, of Tel Aviv University, and colleagues.

Little has been known about the safety and efficacy of the COVID-19 vaccines among patients with rheumatic diseases, because immunosuppressed individuals were not included in the initial clinical trials, they explained.

Man's skin 'peeled off' in rare reaction to Johnson & Johnson COVID vaccine

By Jackie Salo

March 30, 2021 | 3:32pm | Updated

A Virginia man suffered a rare reaction to a COVID-19 vaccine that caused a painful rash to spread across his entire body and skin to peel off, doctors said.

Richard Terrell, 74, of Goochland began suffering strange symptoms four days after receiving the one-dose Johnson & Johnson vaccine, [news station WRIC reported](#).

"I began to feel a little discomfort in my armpit and then a few days later I began to get an itchy rash, and then after that I began to swell and my skin turned red," Terrell told the outlet.

But soon the rash covered his entire body, Terrell said.

"It all just happened so fast. My skin peeled off," Terrell told the outlet.

"It was stinging, burning and itching. Whenever I bent my arms or legs, like the inside of my knee, it was very painful where the skin was swollen and was rubbing against itself," he continued.

He went to the emergency room at the hospital, where doctors determined that he had experienced an adverse reaction to the vaccine, WRIC reported.

"We ruled out all the viral infections, we ruled out COVID-19 itself, we made sure that his kidneys and liver was okay, and finally we came to the conclusion that it was the vaccine that he had received that was the cause," Dr. Fnu Nutan told the outlet.

She said that the medical episode could have been life-threatening if left untreated.

No known allergies. No new exposures aside from the mother's vaccination the previous day.

Ashley Nichole

My brother and his wife who are both front line workers living in Ontario got the ~~vaccine~~. They have a 6 month old daughter who was being breastfed. 3 weeks ago today she suddenly passed away. Cause of death is "idiopathic thrombocytopenia" which means her blood stopped clotting. I am copying and pasting the email straight from their pediatrician who has now refused to take part in this ~~vaccine~~ trial. "Babies don't just get this from breast milk unless there's something in the milk. So if this is being secreted in breast milk than it's also being secreted in the apocrine sweat glands which is where the pheromones come from. The antibody to the ~~spike~~ protein is

being secreted in saliva, being secreted in feces. Your body has produced this synthetic antibody that we know cross reacts with 28 different human tissues."

Does anyone realize how frightening this is?! That ~~vax~~ ~~said~~ is worse than ~~covid~~ or ~~vax~~ combined?!? I am NOT a conspiracy theorist, I believe covid is real but I'm telling you, begging you even please say no to the ~~vaccine~~. If my sister in law did not get it my sweet niece Nora May, who I never even got to hold would still be here. Her doctors even agreed, so this should tell you something.

thepedsdentist I wish I never had to share these words. Our perfect 8 lb baby boy Ara Avanessian Fua was born sleeping on May 12, 2021. At 36 weeks I suffered from an abrupted placenta that caused severe hemorrhage. In labor and delivery nurses and my OB discovered our son no longer had a heartbeat. I had an emergency c-section under general anesthesia because I was in DIC (disseminated intravascular coagulation).

I've never been in so much physical and emotional pain and never wish this upon anyone. Going through postpartum without my baby has been the hardest thing. The only thing

A Utah andrologist (male fertility specialist) just wrote me about the smoking gun, and I have permission to share this about the fertility clinic she works in:

"It's as feared... about sterilizing people with the shot. We have a case study of a young woman we absolutely know was fertile before her shot as she had done three rounds of egg donation.

"She got the shot and came in for a fourth round. The sperm source has a history of healthy embryos (except for a genetic issue they traced to the wife, thus using an egg donor) so we know he is fertile as well.

"With this cycle, post-vaxx, over 30 eggs were retrieved but ZERO embryos survived past day 4-5 of development.

"That's when the cells that will be the placenta start to form which, many are concerned are too close in structure to the spike protein for this to be a safe product for men and women who ever hope to have children.

"(God knows this shot was built to be multifactorial in damage and will wreak havoc on the immune responses of people as well.)

"But it's starting, Robyn, as feared. It's not just her. We are seeing a lot of this but this case is totally controlled for both gamete providers:

"At our staff meeting this morning we discussed the incredible amount of miscarriage we are seeing. It is unprecedented, Robyn.

"I am trying to get data from our own doc—I know he suspects something. We had all embryos fail to fertilize or die on one of our patients and he immediately asked if they'd had the shot.

"They had. Just a few weeks ago".

Top Chinese official admits vaccines have low effectiveness

By JOE McDONALD and HUIZHONG WU April 11, 2021

Gao Fu, director of the China Centers for Disease Control, speaks at the National Vaccines and Health conference in Chengdu in southwestern China's Sichuan province Saturday, April 10, 2021. In a rare admission of the weakness of Chinese coronavirus vaccines, the country's top disease control official says their effectiveness is low and the government is considering mixing them to give them a boost. (Chinatopix Via AP)

BEIJING (AP) — China's top disease control official, in a rare acknowledgement, said current vaccines offer low protection against the coronavirus and mixing them is among strategies being considered to boost their effectiveness.

China has distributed hundreds of millions of doses of domestically made vaccines abroad and is relying on them for its own mass immunization campaign.

But the director of the Chinese Center for Disease Control and Prevention, Gao Fu, said at a conference Saturday their efficacy rates needed improving.

"We will solve the issue that current vaccines don't have very high protection rates," Gao said in a presentation on Chinese COVID-19 vaccines and immunization strategies at a conference in the southwestern city of Chengdu. "It's now under consideration whether we should use different vaccines from different technical lines for the immunization process."

A  corona outbreak among **schoolchildren** after a party in Tel Aviv worries the health authorities in **Israel**. As the TV broadcaster Channel 12 reports, at least 83 young people caught the virus at the celebration - all of them with the same classmate. The main worrying thing about the case is the chain of infection that led to the outbreak.

According to the Times of Israel, the young man who distributed the virus at the party was vaccinated. He, in turn, had become infected from a relative who had also been vaccinated, and that relative had become infected from a person who was also vaccinated and who was recently in London.

The Vaccine Adverse Event Reporting System (VAERS) Results

Messages:

- ▶ VAERS data in CDC WONDER are updated every Friday. Hence, results for the same query can change from week to week.
- ▶ These results are for 491,218 total events.

Event Category ↓	⇒ Events Reported ↑↓	← Percent (of 491,218) ↑↓
Death	11,405	One-third of these deaths were within 48 hours of shot 2.32%
Life Threatening	10,223	2.08%
Permanent Disability	11,221	2.28%
Congenital Anomaly / Birth Defect *	277	0.06%
Hospitalized	36,117	7.35%
Existing Hospitalization Prolonged	423	0.09%
Emergency Room / Office Visit **	56	0.01%
Emergency Room *	62,284	12.68%
Office Visit *	85,634	17.43%
None of the above	325,206	66.20%
Total	542,846	110.51%

Note: Submitting a report to VAERS does not mean that healthcare personnel or the vaccine caused or contributed to the adverse event (possible side effect).

VAERS is a passive surveillance system in the U.S. which captures adverse events following vaccination.

'Events' are reported by hospital staff, nursing home staff, doctors, administrators, etc.

This data is searchable at: <https://wonder.cdc.gov/vaers.html>

It is a federal crime to file a false VAERS report.

Each VAERS case is assigned a unique ID number and has a description of the incident (death, disability, etc.)

Adverse Event Description

Cardiac arrest within 1 hour Patient had the second vaccine approximately 2 pm on Tuesday Jan 12th He works at the extended care community and was in good health that morning with no complaints. He waited 10-15 minutes at the vaccine admin site and then told them he felt fine and was ready to get back to work. He then was found unresponsive at 3 pm within an hour of the 2nd vaccine. EMS called immediately worked on him 30 minutes in field then 30 minutes at ER was able to put him on life support yet deemed Brain dead 1-14-21 and pronounced dead an hour or so later

Listed on the following pages are only 70 of the 5,000+ deaths recorded in VAERS.

Anyone can view the database via the following steps:

<https://wonder.cdc.gov/vaers.html>

1. Accept the disclaimer at bottom of page
2. Click on VAERS data search
3. In section 1, click on group results by "VAERS ID" , and by "vaccine type" and by "event category"
4. Under optional measures (still in section 1) tick off "adverse event description"
5. Scroll down to section 3 and under Vaccine Products select "Covid19 vaccine" Make sure it is the only option selected. (You will have to deselect "All vaccine products" from the top of the list.)
6. Scroll down to section 5 and under event category select "death". Make sure it is the only option selected. (Don't forget to deselect "all events" from the top of the list).

Scroll to the very bottom and click send.

VAERS ID # 938118-1 AGE 51. FEMALE Vaccinated 1/5/2021. Died. 1/10/2021. Pfizer vaccine. On 1/8/2021 17:30 patient taken to ER, cerebellar hemorrhage, stroke, aneurysm.

VAERS ID # 946293-1 AGE 51. MALE Vaccinated 1/7/2021. Moderna . Became increasingly hypoxic around 1800hours on 1/7/2021. Transported to ER for acute on chronic hypoxia respiratory failure. Expired on 1/12/2021@2325 at med center.

VAERS ID # 918518-1 AGE 50. FEMALE Vaccinated 12/31/2020. Died 12/31/2020. Moderna

VAERS ID # 930910-1 AGE 52. FEMALE Vaccinated 1/8/2021. Died 1/8/2021. Patient received COVID vaccination 12:15pm. Patient was monitored for the appropriate amount of time by nursing staff. Patient passed away at 2:15pm. Moderna

VAERS ID # 933739-1 AGE 54. FEMALE. Vaccinated 1/8/2021. Died 1/10/2021. 2 days later. Staff member checked on her at 3am and patient stated that she felt like she couldn't breathe. 911 was called and taken to the hospital. While in the ambulance, patient coded. Two EEGs were given to determine that patient had no brain activity. Pfizer

VAERS ID # 923219-1 AGE 41. FEMALE Vaccinated 12/30/2021. Died. 1/1/2021. Pfizer vaccine. The patient did not experience any adverse event at the moment of inoculation with COVID-19 vaccine or the following days. On January 1, 2021, at lunch time, two days after receiving the vaccine, the patient was found unresponsive in her bed by her partner.

VAERS ID # 936805-1 AGE 25. MALE Vaccinated 12/22/2020. Found unresponsive and expired at home on 1/11. Moderna

VAERS ID # 943397-1 AGE 28. MALE Vaccinated 12/23/2020. Died 1/14/2021. Patient was found unresponsive at work in the hospital. Patient pupils were fixed and dilated. Pfizer

VAERS ID # 939050-1 AGE 32. FEMALE Vaccinated 12/28/2020. Died on 1/4/21 at 7:20am. Moderna

VAERS ID # 921667-1 AGE 39. FEMALE Vaccinated 12/29/2020. It was reported that the staff member deceased somewhere between 1/3/2021 and 1/4/2021. Pfizer

VAERS ID # 933578-1 AGE 43. MALE Vaccinated 1/8/2021. Died 1/9/2021. Moderna

VAERS ID # 937527-1 AGE 44. FEMALE Vaccinated 12/23/2020. Died on 1/4/2021. Pfizer

VAERS ID # 929764-1AGE 45. MALE Vaccinated 12/28/2020. Died 12/29/2020. The patient was found deceased at home about 24 hours after immunization. Moderna

VAERS ID # 934968-1AGE 54. MALE Vaccinated 1/4/2021. Died 1/6/2021. Pfizer. The patient received the vaccine on 04Jan2021, after which he started not feeling well. He went right home and went to bed. He woke up and ate a bit but not much and then was kind of pale. The patient then started to vomit, which continued throughout the night. He was having trouble in breathing. Emergency services were called, and they took his vitals and said that everything was okay, but he was very agitated; reported as not like this prior to the vaccine. The patient was taken to urgent care where they gave him an unspecified steroid shot and unspecified medication for vomiting. The patient continued to vomit throughout the day and then he was very agitated again and would fall asleep for may be 15-20 minutes. When the patient woke up, he was very restless (reported as: his body was just amped up and could not calm down). The patient calmed down just a little bit in the evening. When the patient was awoken at 6:00 AM in the morning, he was still agitated. The patient stated that he couldn't breathe, and his mind was racing. The patient's other brother went to him and he was not responsive, passed on 06Jan2021 around 10:15 AM. It was reported that none of the symptoms occurred until the patient received the vaccine.

VAERS ID # 942106-1 AGE 54. MALE Vaccinated 1/8/2021. Died 1/9/2021. Pfizer vaccine. On scene, the patient had a witnessed arrest with EMS starting CPR. He was given 3 rounds of epi without ROSC. Patient's wife, had noted patient had received covid vaccine the prior day.

VAERS ID: 924456-1, AGE 85 vaccination was administered at approx. 10:00 AM and the patient continued throughout day without any complaints or signs of adverse reaction. When the nursing staff went to the room to check on the resident patient was found unresponsive, no chest rises, noted regurgitated small amount of food to mouth left side.

VAERS ID # 996156-1 AGE 58. FEMALE Vaccinated on 02/02/2021. Moderna. Observed by vaccination team for a period of time. She reported shoulder pain radiating into shoulder blade in arm vaccine was received. Vaccination team offered ice pack to her and released back to work. 10pm that evening, she sent text to coworker that her pain was ""off the charts"" and that she had pain covering her whole left side of her body. She did not come to work in the morning and did not contact work. Well being check was performed at approximately 9am on 2/2/2021 and she was found dead in her home.

VAERS ID # 935511-1 AGE 56. FEMALE Vaccinated 1/8/2021. Died 1/9/2021. Moderna. Patient received the 1st dose of Moderna and was found deceased in her home the next day.

VAERS ID # 941811-1 AGE 56. FEMALE Vaccinated 1/4/2021. Died 1/11/2021. Moderna. Resident began having fever on 1/11/21. Resident sent to nearest ER for evaluation. Later in the evening the staff AT Medical Center called to inform staff that resident had expired @ 2230 as a result of Respiratory Failure and Sepsis.

VAERS ID # 944595-1 AGE 56. MALE Vaccinated 1/12/2021. Died 1/14/2021. Pfizer. Cardiac arrest within 1 hour Patient had the second vaccine approximately 2 pm on Tuesday Jan 12th He works at the extended care community and was in good health that morning with no complaints. He waited 10-15 minutes at the vaccine admin site and then told them he felt fine and was ready to get back to work. He then was found unresponsive at 3 pm within an hour of the 2nd vaccine. EMS called immediately worked on him 30 minutes in field then 30 minutes at ER was able to put him on life support yet deemed Brain dead on 1-14-21 and pronounced dead an hour or so later.

VAERS ID # 921768-1 AGE 58. FEMALE Vaccinated 1/4/2021. Died 1/4/2021. Pfizer.

VAERS ID # 930154-1 AGE 60. MALE Vaccinated 1/5/2021. Died 1/8/2021. Moderna.

VAERS ID # 933090-1 AGE 60. MALE Vaccinated 1/5/2021. Died. 1/9/2021. Pfizer.

VAERS ID # 941743-1 AGE 60. FEMALE Vaccinated 1/12/2021. Died 1/13/2021. Moderna. Found deceased at 3am

VAERS ID # 932898-1 AGE 61. MALE Vaccinated 12/17/2020. Died. 12/30/2020. Pfizer vaccine. The patient had an apparent cardiac arrest on 12/23/20 and was admitted to the ICU. He was taken off of life support on 12/30/20.

VAERS ID # 942085-1 AGE 62. FEMALE Vaccinated 1/2/2021. Died 1/8/2021. Pfizer. On 1/8/21 at 0615 resident was shaking. Reported all over pain. At 0850 she was not responsive.

VAERS ID # 940955-1 AGE 66. FEMALE. Vaccinated 1/11/2021. Died 1/11/2021. Pfizer. Cardiac Arrest. Patient was found pulseless and breathless 20 minutes following the vaccine administration. Received the second dose of BNT162B2. Took the first dose on 21Dec2020. MD found no signs of anaphylaxis.

VAERS ID: 926600-1, 65yo Patient did not report any signs or symptoms of adverse reaction to vaccine. Patient reported not feeling well and passed away that day.

VAERS ID: 925154-1, 84yo DEATH within 1 day, no current illness.

VAERS ID: 926797-1, 93yo had a vaccination on 12/31/2020 late morning passed away early morning 01/01/2020.

VAERS ID: 927189-1, 74yo Patient was vaccinated at 11 am and was found at the facility in his room deceased at approximately 3:00pm. Nurse did not have cause of death

VAERS ID: 927260-1, 87yo No adverse effects noted after vaccination. Patient found unresponsive at 16:45 on 1/6/21. Abnormal breathing patterns, eyes partially closed SPO2 was 41%, pulseless with no cardiac sounds upon auscultation. CPR, pulse regained, patient breathing. Patient sent to ER had multiple cardiac arrest and severe bradycardia and passed.

VAERS ID: 924664-1, 92yo No current illness. At 1855, I was alerted by caregiver, resident was not responding. Per caregiver, she was doing rounds and found resident in bed, unresponsive, mouth open, observed gurgling noises. Primary caregiver observed resident at baseline and ambulating after dinner at approximately, 1800 less than an hour prior to incident. Resident received the first dose of vaccine on 1/2. Expired at 0615 per Castle RN.

VAERS ID: 923993-1, 62yo Patient was vaccinated Dec 30, 2020. Prime dose of Moderna vaccine. Observed for full 15 minutes post-injection. No complaints when asked during observation. Released. Subsequently, vaccine clinic staff learned from the patient's supervisor that patient had expired on Jan 2, 2021 at his home.

VAERS ID: 909095-1, 66yo on 12/24/2020 the resident was sleepy and stayed in bed most of the shift. He stated he was doing okay but requested pain medication for his legs at 250PM. At 255AM on 12/25/2020 the resident was observed in bed lying still, pale, eyes half open and foam coming from mouth and unresponsive. He was not breathing and with no pulse.

VAERS ID: 924464-1, 61yo coughing up blood, significant hemoptysis -- > cardiac arrest. started day after vaccine

VAERS ID: 921768-1, 58yo Vaccine received at about 0900 on 01/04/2021 at her place of work, Medical Center, where she was employed as a housekeeper. About one hour after receiving the vaccine she experienced a hot flash, nausea, and feeling like she was going to pass out after she had bent down. Later at about 1500 hours she appeared tired and lethargic, then a short time later, at about 1600 hours, upon arrival to a friends home she complained of feeling hot and having difficulty breathing. She collapsed, when medics arrived, she was still breathing slowly then went into cardiac arrest and was unable to be revived.

VAERS ID: 910363-1, 84yo Patient had mild hypotension, decreased oral intake, somnolence starting 3 days after vaccination and death 5 days after administration.

VAERS ID: 913143-1, 84yo Vaccine administered with no immediate adverse reaction at 11:29am. Vaccine screening questions were completed and resident was not feeling sick and temperature was 98F. At approximately 1:30pm the resident passed away.

VAERS ID: 913733-1, 85yo My grandmother died a few hours after receiving the moderna covid vaccine booster 1. The treating hospital did not acknowledge this and I wanted to be sure a report was made.

VAERS ID: 914604-1, 74yo Spouse awoke 12/20 and found spouse dead. Client was not transferred to hospital.

VAERS ID: 914690-1, 83yo Within 24 hours of receiving the vaccine, fever and respiratory distress, and anxiety developed requiring oxygen, morphine and ativan. My Mom passed away on the evening of 12/26/2020.

VAERS ID: 914805-1, 63yo RESIDENT CODED AND EXPIRED

VAERS ID: 914895-1, 78yo Injection given on 12/28/20 - no adverse events and no issues yesterday; Death today, 12/30/20,

VAERS ID: 914917-1, 63yo Death by massive heart attack. Pfizer-BioNTech COVID-19 Vaccine EUA

VAERS ID: 914961-1, 88yo pt passed away with an hour to hour and 1/2 of receiving vaccine.

VAERS ID: 914994-1, 90yo pt was a nursing home pt. pt received first dose of covid vaccine. pt was monitored for 15 minutes after getting shot. staff reported that pt was 15 days post covid. Pt passed away with in 90 minutes of getting vaccine.

VAERS ID: 915562-1, 88yo pt received vaccine at covid clinic on 12/30 at approximately 3:30, pt vomited 4 minutes after receiving shot--dark brown vomit, Per staff report pt became short of breath between 6 and 7 pm that night. Pt passed away at approximately 10pm.

VAERS ID: 915682-1, 85yo Resident received vaccine per pharmacy at the facility at 5 pm. Approximately 6:45 resident found unresponsive and EMS contacted. Upon EMS arrival at facility, resident went into cardiac arrest, code initiated by EMS and transported to hospital. Resident expired at hospital at approximately 8 pm

VAERS ID: 915920-1, 96yo Resident was living in an assisted living facility. She fell on 11/24/2020 and was admitted to this facility for rehab. Received vaccine 12/28/2020 in am and expired that afternoon.

VAERS ID: 918065-1, 64yo Vaccine 12/30/2020. 1/1/2020: Pronounced deceased 1/1/2020

VAERS ID: 918388-1, 65yo Vaccine 12/30/2020. 1/1/2020: Resident found unresponsive without pulse, respirations at 04:30 CPR performed, expired at 04:52 by Rescue, No acute illness at time of vaccination.

VAERS ID: 918418-1, 65yo Vaccine 12/30/2020. 1/1/2020: Resident became SOB, congested and hypoxic requiring oxygen, respiratory treatments and suctioning. Stabilized after treatment and for the next 72 hours with oxygen saturations in the 90s. On 1/3/2021 was found without pulse and respirations.

VAERS ID: 918487-1, 94yo Two days post vaccine patient went into cardiac arrest and passed away.

VAERS ID: 915880-1, 99yo Patient died within 12 hours of receiving the vaccine.

VAERS ID: 918518-1, 50yo syncopal episode - arrested - CPR - death

VAERS ID: 919108-1, 100yo Fever, Malaise, passed the day after vaccine.

VAERS ID: 919537-1, 96yo Resident exhibited no adverse events during 30 minute monitoring following vaccine administration. Resident found without pulse at 1900.

VAERS ID: 920326-1, 89yo Redness and warmth with edema to right side of neck and under chin. Resident expired on 1.1.21.

VAERS ID: 920545-1, 93yo "The resident received is vaccine around 11:00 am and tolerated it without any difficulty or immediate adverse effects. He was at therapy from 12:36 pm until 1:22 pm when he stated he was too tired and could not do anymore. The therapist took him back to his room at that time and he got into bed himself but stated his legs felt heavy. At 1:50 pm the CNA answered his call light and found he had taken himself to the bathroom. She stated that when he went to get back into the bed it was ""abnormal"" how he was getting into it so she assisted him. At that time he quit breathing and she called a RN into the room immediately. He was found without a pulse, respirations, or blood pressure at 1:54 pm.

VAERS ID: 920815-1, 58yo Found deceased in her home, unknown cause, 6 days after vaccine.

VAERS ID: 920832-1, 104yo Vaccine 12/30/2020 Screening PCR done 12/31/2020 Symptoms 1/1/2021 COVID test result came back positive 1/2/2021 Deceased 1/4/2021

VAERS ID: 921175-1, 77yo Resident received Covid Vaccine, noted after 30 mins with labored breathing BP 161/77, HR 116, R 38, T 101.4, epipen administered, sent to ER, died

VAERS ID: 921481-1, 88yo Vaccine given on 12/29/20 by Pharmacy. On 1/1/21, resident became lethargic and sluggish and developed a rash on forearms. Resident expired on 1/4/2021

VAERS ID: 921547-1, 65yo RESIDENT RECIEVED VACCINE ON 1/2/20. DEATH ON 1/4/2021.

VAERS ID: 921572-1, 87yo Resident had body aches, a low O2 sat and had chills starting on 12/30/20. He had stated that they had slightly improved. On 1/2/21 during the NOC shift his O2 sat dropped again. He later went unresponsive and passed away.

VAERS ID: 921667-1, 39yo LTCF Pfizer Vaccine clinic conducted 12/29/2020 Vaccine lead received a call indicating that a staff member deceased somewhere between 1/3/2021 and 1/4/2021. Cause of death is unknown, and an autopsy is being performed.

VAERS ID: 921880-1, 96yo The resident was found deceased a little less than 12 hours following COVID vaccination.

The FDA has had 10 months to get a safety monitoring system in place, but is no where near implementing one.

02/19/21

One-Third of Deaths Reported to CDC After COVID Vaccines Occurred Within 48 Hours of Vaccination

The numbers reflect the latest data available as of Feb. 12 from the CDC's Vaccine Adverse Event Reporting System website. Of the 929 reported deaths, about one-third occurred within 48 hours.

As is consistent with [previous VAERS data reports](#), 192 of the reported deaths — or 21% — were cardiac-related. As [The Defender](#) reported earlier this month, Dr. J. Patrick Whelan, a pediatric rheumatologist, warned the U.S. Food and Drug Administration in December that [mRNA vaccines](#) like those developed by [Pfizer](#) and [Moderna](#) could cause heart attacks and other injuries in ways not assessed in safety trials.

Of the 929 deaths reported since Dec. 14, 2020, the average age of the deceased was 77.8 and the youngest was 23. Fifty-two percent of the reported deaths were among men, 45% were women and 3% are unknown. Fifty-eight percent of the deaths were reported in people who received the Pfizer vaccine, and 41% were related to the Moderna vaccine.

States with the [highest reported number](#) of deaths were: California (71); Florida (50); Ohio (38); New York (31); Kentucky (41); Michigan (31); and Texas (31).

According to the latest data, [3,126 "serious" adverse reactions](#) have been reported. Adverse reaction reports from the latest CDC data also include:

- [34 miscarriages and pre-term births](#)
- [917 anaphylactic reactions](#), 70% of which were reported after a [Pfizer](#) vaccine and 30% after the [Moderna](#) vaccine
- [Bell's palsy](#) (Pfizer 75%; Moderna: 25%)

So far, only Pfizer and Moderna vaccines — approved for [emergency use](#), but not fully licensed — are being used in the U.S.

Meanwhile, the FDA has not yet implemented systems to monitor the safety of the [experimental](#) COVID vaccines. FDA officials [told The New York Times](#) they don't expect the systems to be up and running before the Biden administration reaches its goal of vaccinating 100 million Americans — nearly one third of the U.S. population.

The U.K. has their own tracking system (Yellow Cards) Europe has EudraVigilance

BREAKING: UK gov't says over 240 people in Britain died shortly after receiving COVID jab

The report included in its ancillary material the information that a total of 8 miscarriages have been reported

LONDON, England, February 11, 2021 (LifeSiteNews) — A U.K. government vaccine safety review has revealed that 244 people, including 8 unborn babies, have died in Britain shortly after receiving one of two coronavirus vaccines. The government has said that it does not believe the inoculations are responsible.

An extensive report produced by the U.K. government today has detailed all the suspected side effects, including death, reported by medical staff or the people who received at least one Covid-19 vaccine between early December 2020 and January 31, 2021. The two vaccines currently in use in the U.K. are the Pfizer/BioNTech and the Oxford University/AstraZeneca. They were authorized by the country's Medicines and Healthcare products Regulatory Agency (MHRA).

The MHRA monitors the safety of the vaccines as they are used on the public, and to this end they introduced a "Yellow Card Scheme" to collect reports of any suspected side effects. 20,319 Yellow Card reports, including a total of 59,614 suspected adverse reactions, were made regarding the Pfizer vaccine. 11,748 were made regarding the AstraZeneca vaccine, which was rolled out only on January 4, 2021. 72 Yellow Card reports did not specify which vaccine was used.

According to the report:

The MHRA has received 143 UK reports of suspected ADRs to the Pfizer/BioNTech vaccine in which the patient died shortly after vaccination, 90 reports for the Oxford University/AstraZeneca vaccine and 3 where the brand of vaccine was unspecified.

The report included in its ancillary material the information that 5 miscarriages were reported after the use of the Pfizer vaccine and 3 after the Oxford vaccine.

Suspected adverse reactions after receiving Pfizer/BioNTech vaccine

A total of **59,614 suspected side effects** were recorded after use of the Pfizer/BioNTech vaccine.

The link to the Pfizer vaccine analysis shows clearly that **1,437 blood disorders** have been reported after inoculation, 1,204 of them being lymphadenopathy (enlarged or swollen lymph nodes). **712 cardiac disorders** were reported, notably palpitations (303) and a speeding heart rate (230). **445 ear disorders** were reported, including vertigo (146), ear pain (122), and varying amounts of hearing loss (31).

The European Medicines Agency publishes these data so that its stakeholders, including the general public, can access information that European regulatory authorities use to review the safety of a medicine or active substance. **Transparency** is a key guiding principle of the Agency.

EudraVigilance

However, there have been reports of more serious damage associated with the vaccine, notably anaphylaxis and Bell's Palsy. Now 130 "spontaneous adverse reactions associated with anaphylaxis or anaphylactoid reactions" in Britain have been reported for the Pfizer vaccine, and 30 have been reported for the Oxford vaccine. Bell's Palsy, which involves facial paralysis or weakening of the facial muscles, has been reported 99 times for the Pfizer vaccine and 15 times for the Oxford vaccine. The MHRA says that because this ailment "can also occur naturally, an association with the vaccine is not yet confirmed."

There were **224 injuries** reported, and **357 metabolic disorders**, of which 252 were decreased appetite. **8,129 muscle and tissue disorders** were mentioned, of which 2,690 were muscle pain and 1,704 were joint pain. **11,160 nervous disorders** were reported, including 5,506 headaches, 1,546 cases of dizziness, 45 seizures, 15 cases of paralysis, and 1 case of locked-in syndrome. There were **5 miscarriages** reported.

Of the **830 psychiatric disorders** reported, 162 were insomnia, 112 cases of being in a confused state, and 73 bouts of anxiety. Of the **120 renal & urinary disorders**, 35 were renal pain and 12 were urinary incontinence. There were **187 reproductive and breast disorders** mentioned, of which 31 were breast pain and 22 menorrhagia (heavy periods).

There were **2,397 respiratory disorders** reported, including 520 cases of difficulty in breathing, 483 sore throats, and 426 cases of coughing. **3,947 skin disorders** were reported, including at least 796 rashes and 776 cases of itchiness. The **676 vascular disorders** on record included 182 hot flushes.

There were **823 references to eye disorders**, including 145 reports of eye pain, 126 of blurred vision, and 5 of blindness. **6,605 gastrointestinal disorders** were reported, among them 2,889 cases of nausea, 924 cases of diarrhea, 775 cases of vomiting, and 283 cases of upper abdominal pain. Of the **19,354 "general disorders"** reported, 4,007 were cases of fatigue, 3,665 were fevers, 2,310 were chills, 773 referred to vaccination site pain, 491 were "influenza-like illnesses." There were **308 immune system disorders**, mostly hypersensitivity (146) and anaphylactic reactions (116).

Ironically, there were **1,186 reported infections**, including 308 cases (including "suspected cases") of Covid-19 itself, 231 cases of influenza, and 154 upper respiratory tract infections.

From Europe: 3,964 People Have Died from Adverse Drug Reactions for COVID-19 Vaccines - 162,610 Injuries

A **database maintained in Europe** has an inventory of cases where people either died or were injured. Their report through March 13, 2021 lists 3,964 deaths and 162,610 injuries following injections

Please lift [redacted] up in prayer. I just had to leave her at Rush ER. She got the Covid Vaccine while at work yesterday and is having a serious reaction from it. She is totally numb on the left side of her body, having uncontrollable convulsions and says she is freezing. This is all that I know right now, I can't even go inside the building with her.

Tara Sekikawa
Dec 27, 2020 · 🌐

I went to work today and ended up in the ER. Thank god I work at a hospital. I'm positive this episode is from the Covid19 vaccine. I had tachycardia. My heart beat was 239. I haven't felt right since I got the injection on Tuesday. I have had a headache ever since. I will not be getting the 2nd shot. This was my experience with the vaccine I felt I should share it.

80% of care home staff in my town got covid 3 weeks after flue and CV jabs. All tested positive on the same day.

Dehner Maurer

I'm having a moral dilemma and could use some advice. We had our Covid vaccination clinic yesterday. A resident that received the vaccine coded and died within 12 hours. While it is probably coincidental I still feel this should be reported to VAERS. I am being directed not to report by corporate. I am leaning to report regardless. What would you do? I had already put in my notice but am contemplating not working out the full 30 days

My experience with the vaccine has been the most brutal experience I can even imagine.

I went into anaphylaxis shock. I had seizures. I feel confused. I feel weird. I don't feel like my self. I had cpr done. My heart was racing one minute, to them not being able to find it. One minute I'm talking, the next I'm past over shaking and unresponsive. Once I'm finally responsive, I have no clue where I am. The walls are moving, the lights on the ceiling are going round and round in the hospital.... there's no way a vaccine can make people feel like this right?

Just had our second severe COVID vaccine reaction call... I'm a Paramedic on 🚑: 1st call was CPR in progress, no underlying health conditions, 65 y/o, 1 day after Pfizer vaccine. And 57 y/o severe neurological issues/stroke like symptoms (weakness/ numbness in left side, can't move left arm, speech stuttering, severe headache, low BP) 2 days after Pfizer 🩺 here we go!

negative. I unfortunately returned to work learning one of my residents had passed away who had got the vaccine. Of course it's being said it wasn't because of the vaccine. I am having a hard time even looking at my job the same way anymore. Most of the staff here had refused the vaccine to start with so it's hard to even compare experiences with my co-workers. I was told today that I should get another MMR

Should have listened to you. I am so sick!!!! The worst headache of my life, shortness of breath, dizzy, can't seem to warm up. I am telling you right now I am not getting a second dose. I am literally scared to go to sleep. I feel like I am going to have a panic attack every time I barely doze off. Help...

From my LNA friend who works at Dover Riverside Nursing Home: An update on the vaccine... it was administered Monday afternoon to the residents and last night during my 3-11 shift 4 residents died. That is completely unheard of. We never even have 4 go in one day. 3:11 PM

She also said:
Several of my coworkers had reactions and side effects as well. I'm not sure why they're experimenting on healthcare workers. What's going to happen when all the healthcare workers are harmed by this? 3:18 PM

Eight days after I got it, I developed edema in my feet up to 3/4 of my shins. Still battling it and it started on Christmas. At it's worst, it got to 3-4+ edema.

My cousin's daughter had the Pfizer covid vaccine. After her second one, she had a seizure. She's never had a seizure before. She's only 20 years old. She has had a

Art [redacted]
My grandfather's doctor in his early 70s died from a heart attack within 24 hours after getting this 'vaccine'. He received Moderna but Pfizer is the same sh!t. He had no underlying health conditions and was a healthy doctor still practicing in his early 70s. His office staff are 100% convinced his heart attack was caused by this 'vaccine'. My grandparents won't be taking this shot.

Richard G [redacted]

My next door neighbour got the vaccine yesterday. He's dead today. We have been told by relatives that he died of a heart attack. He was in his 70s this cannot be a coincidence.

Feddy [redacted]

So my 27 year old daughter is in hospital with abnormal heart rhythm and burning pain in her head and spine .. and a pulse rate of 150 after receiving Pfizer vaccine .. anyone else got the same issues.. she's only 27 ?

Vicky [redacted]
My mother in law had the covid vaccine on Saturday two weeks ago rushed to hospital on Sunday next morning breathing difficulties, they have done an X-ray and found a bit of fluid at the bottom of her left lung . Breathing better though now ..until the next dose 🙄

My daughter's friend's mother (aged 60) who had the vaccine two weeks ago (in the UK) hours after having the jab, felt ill and went to bed and never woke up, she died of brain aneurism! 🙄💔

Don [redacted]
I've a friend tested positive and recovered in Oct
1st shot 3wks ago
Had stroke 3 days ago
On life support with no brain function

My neighbour had the Oxford one Thursday and admitted with multiple organ issues as well as water retention on Saturday. We are hoping to see if she responds to treatment. She's very poorly.

My doctor's long term receptionist died after taking the 2nd Pfizer "vaccine" on Jan 22, 2021. She was 50 years old, healthy and exercised regularly. Her best friend said she had no underlying medical problems. She was laughing at work when she left to take the 2nd "vaccine" at a hospital 1 hr away. On the way home she felt horrible and wasn't able to walk by 3:30 pm when she got home. She was taken to a local hospital where she died of blot clots in her lungs that night. Blood clots have been listed as a side effect of the so called "vaccine."

Despite my pleading, dad took the covid "vaccine" a couple days ago. This morning he passed out for the first time in his life and was taken by ambulance to the ER with wild heart issues. If something happens to him, I will not rest until all involved are held accountable.

From a friend.
"Just had an update on my cousin who is in hospital. He and his wife volunteered to take part in some American covid vaccine trials where they live in Exmoor. A couple of days later my cousin was very unwell and his lips turned blue. His wife used to be a nurse and she also said she felt a bit unwell. However....they still flew to Tenerife where they go every year from the first week in December to the second week in February. On landing at the airport he took a turn for the worse and took a covid test which was negative. They continued to the villa and got on with their holiday. A few days later he collapsed on his way back from the shops and was taken to hospital. Still negative for covid so decided to fly back to UK. A few days after that he had to be taken to hospital. They thought he had had a heart attack and also possibly a blood clot and he was put on meds. He then got breathing problems. All this time his wife can't visit him and they have been trying to tell the doctors they think it was to do with the trials. The American trial people aren't interested and the hospital haven't contacted them to get data as they are convinced it is a heart defect. His brother phoned me this morning to say he is now on oxygen, the doctors think he has damaged the muscles in his heart and he has fluid round his lungs compressing them. They are giving him tablets to try and reduce the fluid. They said his heart is out of rhythm but they can't restart it because of the risk of his lunas. He is the fittest person you have met. He used to swimming and physical training and exercised day of his life."

Goodbye America
@BonVoyage_USA
My mother ended up with a stroke 2 days after vaccine. Beat Covid without issue. The vaccine permanently ruined what she has left in life.

Sharing in hopes of saving someone else's life... My dad died 72 hrs after receiving the Moderna jab. He was 75. He was not in perfect health, but was living a normal, productive life, cutting almost 20 acres of property, eating healthy, hanging out with his friends, golfing, and was supposed to leave for a 6 week vacation w my mom next week. He got the shot on Tuesday about 11:50am. He spent the afternoon hanging out with friends (had a few cocktails) and then cut grass for a couple hrs. That evening he was feeling achy and tired. Within 24 hrs his symptoms included nausea, vomiting, diarrhea, anorexia, back pain, dizziness, poor color, and fatigue. This continued for 2 days. He tried to drink water and stay hydrated, he was not able to eat. Thursday night he had extreme diarrhea. We also noticed he was having trouble picking up his feet to walk, he was shuffling his feet and unstable. He did not say anything to us, he thought he had a stomach bug. He had some OJ Friday morning. My mom left to run errands and when she came home at lunchtime, she found my dad, he was already gone. Basically, he was sick within hrs of the jab and dead in 72 hrs post jab. Not a coincidence.

I will tell you what happened to my Dad. He died last Tuesday. No underlying health problems and 100% fit. Day 4 after Pfizer vaccine he got double vision. It wouldn't shift so my Mum took him to A & E. CT scan of his head, showed no problems. Full MRI scan of his body showed no problems anywhere. They said his vision would improve..it didn't! He couldn't even walk straight, read or watch tv. Day of 2nd Pfizer vaccination...by the evening felt very ill..got worse as the days went on. Pains, aches that he'd never had before. Totally fit man with no heart problems or anything else. Day 4 of 2nd Pfizer vaccine, rushed to hospital not being able to breathe. By that afternoon, sedated, ventilated and on life support. Kept alive on life support for 8 days. On day 8 we were allowed to spend 2 hours with him and made the decision to turn his ventilator off. His heart was too damaged for survival they said. He took his last breath on Tuesday the day after the removal of the ventilator. Consultant said it was coincidence about him becoming ill and the vaccine. I'm not so sure. Death certificate reads total heart block and pneumonia- natural death. How? He had nothing wrong with his heart the MRI showed that! How did he get a totally blocked heart between 1st vaccine and 2nd!? 😞

Edited to add: U.K.

Jerry and I experienced the sudden tragic loss of my mother. She lost her ability to walk, stand, move, talk, eat, drink, and breathe following the Covid-19 vaccine. Her death happened so fast. I'm devastated, and I wasn't sure how to share this shocking news. This is my mother's experience, not a subject of debate anti or pro this or that. It is what has happened to my mother. Norway has stopped offering the vaccine to people 80 or over after sudden deaths post-vaccination. My mother was exactly one month from her 80th birthday, had no underlying health conditions, and like a light switch, became unresponsive.

This is my FIL 12/31/2020, first in line at a SNF, for the first dose of #Pfizer. He was there for physical therapy rehab and had no "skilled nursing needs" or underlying disease process. #2nddose was 1/20/2021, and he was scheduled for discharge to Assisted Living 1/29/2021. He passed away 1/22/2021. He wasn't the same after dose 1.

Please please everyone be cautious with your loved ones who are having the Covid 19 vaccine. We are still waiting for the post mortem for my mum but I am CONVINCED that she had a reaction to it. She was fine and well Saturday after having the vaccine at 11:20 she started feeling unwell shivering and dizzy Saturday night. Went to bed 8pm and never woke up. Please please warn your loved ones. Get them to question how it reacts to other medication. I'll never know the truth but I'm utterly convinced that's why my wonderful mum has left us so suddenly. Please don't let this hell We are in impact your life also 🙏🙏

Hi 🙋

My wife is 34 and had the AZ vaccine 36 days ago.
She started going blind 32 days ago.
 She currently has 0% vision in the left eye and about 80% in the right eye.
 There hasn't been a single day that her vision has improved.... it's just slowly getting worse.

Has anyone else had this?
 What what your prognosis?
 Have you recovered?

Looking for hope.....

EDIT*****
 Seen opticians twice
 Hospital eye clinic once
 CT scan twice
 Doctors 20 + times
 Blood tests 3 or 4 times

Neurologist tomorrow
 No MRI scan date as yet

My mother- in-law got both shots and 2 1/2 weeks after 2nd shot she went to the ER. Her platelets were at a 12 and she was diagnosed with Acute Lymphocytic Leukemia. Maybe it was a coincidence but it came on fast.

My beautiful granny got her 2nd Covid shot yesterday and is completely unresponsive today. Hoping for a better tomorrow... thoughts appreciated.

Nina [redacted] post [redacted]

My sons grandpa had the second shot yesterday morning and my 8 yr old son stayed the night there last night. This morning him and his grandma found him lying on the floor unable to move his arms or legs or speak. They took him to the hospital by ambulance and said they are running tests. Anyone hear of these types of reactions? Or was it just a coincidence?

March 29 at 8:02 PM · 📍

My Dad had a heart attack less than 24hrs after he received his first Pfizer vaccination. He had a second heart attack three days later and devastatingly died 33hrs later. It has taken 6 and a half weeks for the MHRA to respond to a report of a possible Serious Adverse Reaction I.E A Death to a COVID-19 vaccine. 💔

My brother is on life support critical after having the vaccine. 3 hours after he had the jab' he collapsed and never regained consousneses, The hospital tried to say he had covid, but wasn't even tested at that time, plus he went to work the same morning' again was fine. Now they have given him 48hrs...More

My heart is broken. This is a pain I knew I would have to face one day and I knew it would be one of the hardest things to face. We had to say "see you later" to my dad yesterday. He was one of my absolute favorite people and he knew it. He was my best friend. He was the one I would call if I was going through something like this and I would say "Dad, what am I supposed to do" I would just call sometimes to hear his voice. I will miss his voice. He was an amazing dad and an amazing grandpa. People want to know what happened. I will tell you so you know, but we are processing through this. He got the vaccine yesterday morning, had a headache after so he laid down to take a nap and he never woke up.

My mom consented to the Pfizer CV19 vaccine on 1/4/21 and passed away on 1/17/21 🥺❤️

She tested negative for covid all of 2020 and tested negative the morning of 1/12/21.

On 1/14/21 she tested positive and was moved to the skilled nursing home's covid unit. Her lungs were clear. She had a slightly elevated temperature.

A couple days after my mom received the CV19 vaccine, she stopped eating and drinking. Interestingly, her doctor was never told she received the vaccine even after she died. I was the one to give him that information 🥺

So my mother was 72 years old. She received the first of the moderna vaccines. She died six hours later. She had the typical American health conditions. Diabetes heart disease hypertension. However she was stable. I spoke to her the night before at 10 p.m. and she was fine. She died early the night. This just happened on Valentine's Day.

Richard Gibson ▸

Sadly my mum died at home three and a half hours post Pfizer vaccination. Had shown no adverse symptoms to vaccination prior death. Found unconscious on toilet floor but breathing prior death. Eighty eight years old, frail with underlying medical condition.

Josaiah McLean Sr.

My grandmother died yesterday after being vaccinated on Saturday. Her last words were that shot is making me woozy.

I am sad about my mother's death today, less than 10 days from her 2nd dose of Pfizer Covid vaccine. She was a memory patient, but had been strong and active until she fell for the first time in 87 years, after the first covid vaccine and twice after the second dose.
