Breach : true
Name : Data Enrichment Exposure From PDL Customer
Bio : In October 2019, <https://www.troyhunt.com/data-enrichment-people-data-labs-and-another-622m-email-addresses> target="_blank" rel="noopener">security researchers Vinny Troia and Bob Diachenko identified an unprotected Elasticsearch server holding 1.2 billion records of personal data. The exposed data included an index indicating it was sourced from data enrichment company People Data Labs (PDL) and contained 622 million unique email addresses. The server was not owned by PDL and it's believed a customer failed to properly secure the database. Exposed information included email addresses, phone numbers, social media profiles and job history data.

Breach : true

Name : Exactis

Website : exactis.com

Bio : In June 2018, the marketing firm Exactis inadvertently publicly leaked 340 million records of personal data. Security researcher Vinny Troia of Night Lion Security discovered the leak contained multiple terabytes of personal information spread across hundreds of separate fields including addresses, phone numbers, family structures and extensive profiling data. The data was collected as part of Exactis' service as a "compiler and aggregator of premium business & consumer data" which they then sell for profiling and marketing purposes. A small subset of the exposed fields were provided to Have I Been Pwned and contained 132 million unique email addresses.

Breach : true

Name : Not Acxiom

Bio : In 2020, a corpus of data containing almost a quarter of a billion records spanning over 400 different fields was misattributed to database marketing company Acxiom and subsequently circulated within the hacking community. On review, Acxiom concluded that "the claims are indeed false and that the data, which has been readily available across multiple environments, does not come from Acxiom and is in no way the subject of an Acxiom breach". The data contained almost 52M unique email addresses.

Breach : true

Name : River City Media Spam List

Website : rivercitymediaonline.com

Bio : In January 2017, a massive trove of data from River City Media was found exposed online. The data was found to contain almost 1.4 billion records including email and IP addresses, names and physical addresses,

all of which was used as part of an enormous spam operation. Once de-duplicated, there were 393 million unique email addresses within the exposed data.

Breach : true

Name : Twitter (200M)

Website : twitter.com

Bio : In early 2023, over 200M records scraped from Twitter appeared on a popular hacking forum. The data was obtained sometime in 2021 by abusing an API that enabled email addresses to be resolved to Twitter profiles. The subsequent results were then composed into a corpus of data containing email addresses alongside public Twitter profile information including names, usernames and follower counts.

Breach : true

Name : Unverified Data Source

Website : astoriacompany.com

Bio : In January 2021, over 11M unique email addresses were discovered by Night Lion Security alongside an extensive amount of personal information including names, physical and IP addresses, phone numbers and dates of birth. Some records also contained social security numbers, driver's license details, personal financial information and health-related data, depending on where the information was sourced from. Initially attributed to Astoria Company, they subsequently investigated the incident and confirmed the data did not originate from their services.

Breach : true

Name : Verifications.io

Website : verifications.io

Bio : In February 2019, the email address validation service verifications.io suffered a data breach. Discovered by Bob Diachenko and Vinny

Troia

, the breach was due to the data being stored in a MongoDB instance left publicly facing without a password and resulted in 763 million unique email addresses being exposed. Many records within the data also included additional personal attributes such as names, phone numbers, IP addresses, dates of birth and genders. No passwords were included in the data. The Verifications.io website went offline during the disclosure process, although [an archived copy remains viewable](https://web.archive.org/web/20190227230352/https://verifications.io/).

Breach : true

Name : Zynga

Website : zynga.com

Bio : In September 2019, game developer [Zynga](https://www.cnet.com/news/words-with-friends-hack-reportedly-exposes-data-of-more-than-200m-players/) (the creator of Words with Friends) suffered a data breach. The incident exposed 173M unique email addresses alongside usernames and passwords stored as salted SHA-1 hashes. The data was provided to HIBP by dehashed.com.
