“Output was always bigger than input”—
Canadian/ Belgian
research team, April
2011

OCEANS OF FREE ENERGY

- ZERO-POINT VACUUM ENERGY
- DIRAC SEA
- TIME DERIVATIVE FIELDS
- MICRO ELECTRODYNAMIC FLUCTUATIONS
- TELLURIC CURRENTS
- EARTH'S CORE ENERGY
- G-STRAIN ENERGY OF SPACETIME

A candid shot of John Bedini taken during the filming of the [Documentary Series ENERGY FROM THE VACUUM](#)

A Partial List of Successful Documented EM Over-Unity and Negative Resistor Devices and Processes (in no particular order)

“There are at least 20 or more legitimate COP>1.0 EM power systems by various inventors and researchers in the U.S. alone”—Tom Bearden

[Things we must include in a legitimate theory of overunity EM devices](#)— Tom Bearden

Note: A number of working overunity devices can be built from the plans posted on [John Bedini's Website](#). Tom Bearden advises that these devices will work only if they are built exactly as shown, with no deviations or "improvements."

The Kawai overunity magnetic motor can also be built directly from the Patent plans - see below

● **NEW** added 5/2/2021 ●

[In 1269 A.D. Peter Peregrinus wrote a treatise on a free energy machine, a permanent magnetic motor.](#)

excerpted from the February 1994 "Energy in Motion" Newsletter, published and edited by Gary and John Bedini.

[See the details](#) (includes Lee Bowman's 1954 replication details).

41. [Nathan Stubblefield - Earth Battery](#) ● NEW
Stubblefield actually called it an energy receiver, a receptive cell for intercepting electrical ground waves, also listed are a list of numerous other successful Earth Batteries, **dating back to 1837**
42. [Professor Alexander Chernetsky's Vacuum-Plasma Energy Converter](#) ● NEW
43. [Joseph Newman's machine](#) ● NEW
44. [John Bedini's G-field generator - the Kromrey Converter](#) ● NEW
"This concept does in fact work. It took me over a year, 4 rotor designs, and 5 coil designs, but I now have a working model that provides the CFL lighting for my 2-bedroom apt. It's not earth-shattering power, I realize, but it does work. Also, I would never try to 'go public' with something like this; far too much drama. I'll just keep using my little machine to save about \$150/month and call it a 'win' :)"—Comment on YouTube
45. [The Lockridge Device](#) ● NEW
46. [The Zero Fuel Engine System from Designex](#) ● NEW
47. [Alexander Nikulov's Quantum Power Source](#) ● NEW
Tom Bearden writes: See, e.g., Alexey Nikulov, "Quantum Power Source." It contains the detailed explanation, etc. and also additional references in the published literature. This is really good scientific work. It appears that some 10^8 of these could be placed on a surface about 1 cm square, to provide one watt of power for free. By multilayering the squares, one could build up a little power supply of, say, 100 watts. It could sit there and power a 100 watt load continuously, with no problem. The work was supported by the Russian Academy of Sciences, and is part of their program on "Low Dimensional Quantum Structures".

48. [Doyle Noyes system.](#) ● **NEW**
Experimentally proven in heating a number of buildings in Kentucky and Canada with no input power. Explanation by Tom Bearden
49. [Advanced thermion particle reactor](#) ● **NEW**

According to free energy researcher Patrick Kelly

If you feel that this opposition to free-energy and related technology is a figment of my imagination and that the people who state that more than 40,000 free-energy device patents have already been suppressed, then please consider this extract from a 2006 reminder to Patent Office staff in America to single out all patents which have to do with free-energy and any related subjects and take those patent applications to their supervisors to be dealt with differently to other patent applications:

B. Subject matter of special interest in TC 2800

1. Perpetual motion machines; classes 310 and 290
2. Anti-gravity devices
3. Room temperature superconductivity; class 310
4. Free energy—Tachyons, etc.
5. Gain-Assisted Superluminal Light Propagation (faster than the speed of light); class 702, 359
6. Other matters that violate the general laws of physics; classes 73, 290.
7. Applications containing claims to subject matter which, if issued, would generate unfavorable publicity for the USPTO, class 84, 702.
8. Reexamination proceedings involving patents in litigation and:
The court decision/verdict is subject to review by the Supreme Court
The court decision includes high monetary awards
The technology and companies involved would likely generate high publicity
