WAHT IS STARKILLER?

⚡ STARKILLER ⚡

Advanced Real-Time Phishing Infrastructure

****STARKILLER**** is an advanced phishing infrastructure that creates real-time browser sessions for credential harvesting. Unlike static phishing kits, Starkiller renders actual websites in isolated Docker containers, bypassing 2FA, capturing live sessions, providing full victim screen monitoring, and offering complete command & control over victim browsers - all from a cyberpunk-themed admin panel.

MEDIUM VERSION (Forum/Article)

****STARKILLER**** is a next-generation phishing-as-a-service platform designed for advanced social engineering operations. The system deploys real Chromium browser instances inside Docker containers, allowing operators to serve pixel-perfect replicas of ANY target website in real-time.

Core Capabilities:

Feature	Description
? **LIVE_BROWSER_RENDER**	Real-time website mirroring via Chromium
? **CREDENTIAL_INTERCEPT**	Capture usernames, passwords, tokens
? **SESSION_HIJACK**	Steal authenticated cookies in real-time
? **2FA_BYPASS**	Bypass SMS, TOTP, Push authentication
? **SCREEN_CAPTURE**	Live VNC victim screen monitoring
📄 **KEYSTROKE_LOG**	Real-time keylogger with timestamps
? **GEO_TRACKING**	IP-based victim location + flag display
? **VICTIM_CONTROL**	Send commands to victim's browser
? **EMAIL_CAMPAIGNS**	Built-in bulk phishing email sender
? **PROTECTION_SYSTEM**	Anti-scanner, rate limiting, DDoS protection

Each victim interaction spawns an isolated container, ensuring clean operations and preventing cross-contamination between targets.

FULL VERSION (Detailed Documentation)

⚡ STARKILLER ⚡

Advanced Real-Time Phishing Infrastructure

STARKILLER represents the evolution of phishing technology. Traditional phishing relies on static HTML pages that look outdated, trigger security warnings, and fail against modern

authentication systems.

****Starkiller changes everything.****

WHAT MAKES STARKILLER DIFFERENT?

Real Browser Technology

Instead of serving fake HTML pages, Starkiller launches ****actual Chromium browser instances**** inside Docker containers. When a victim clicks your link, they interact with the ****REAL website**** - rendered live through our infrastructure.

- Every button works
- Every animation plays
- Every security feature functions
- Zero visual difference from the real site

Session Hijacking

As victims authenticate, Starkiller captures their session cookies, tokens, and credentials ****in real-time****. Take over their authenticated session instantly - no need to replay credentials.

2FA/MFA Bypass

Because victims complete authentication on the real site through our proxy, ****all two-factor authentication is handled by them****. You receive the fully authenticated session after they complete verification.

Works against:

- SMS codes
- TOTP (Google Authenticator, Authy)
- Push notifications
- Hardware keys (when proxied)

Live Screen Monitoring

Watch your victims in real-time through ****noVNC integration****:

- See their screen live
- Monitor their navigation
- Observe their behavior
- Full visibility into every interaction

Command & Control (C2)

Send commands directly to the victim's browser:

| Command | Function |

|-----|-----|

| ****REDIRECT**** | Force victim to any URL with optional delay |

| ****FAKE_NOTIFICATION**** | Show convincing desktop-style notifications |

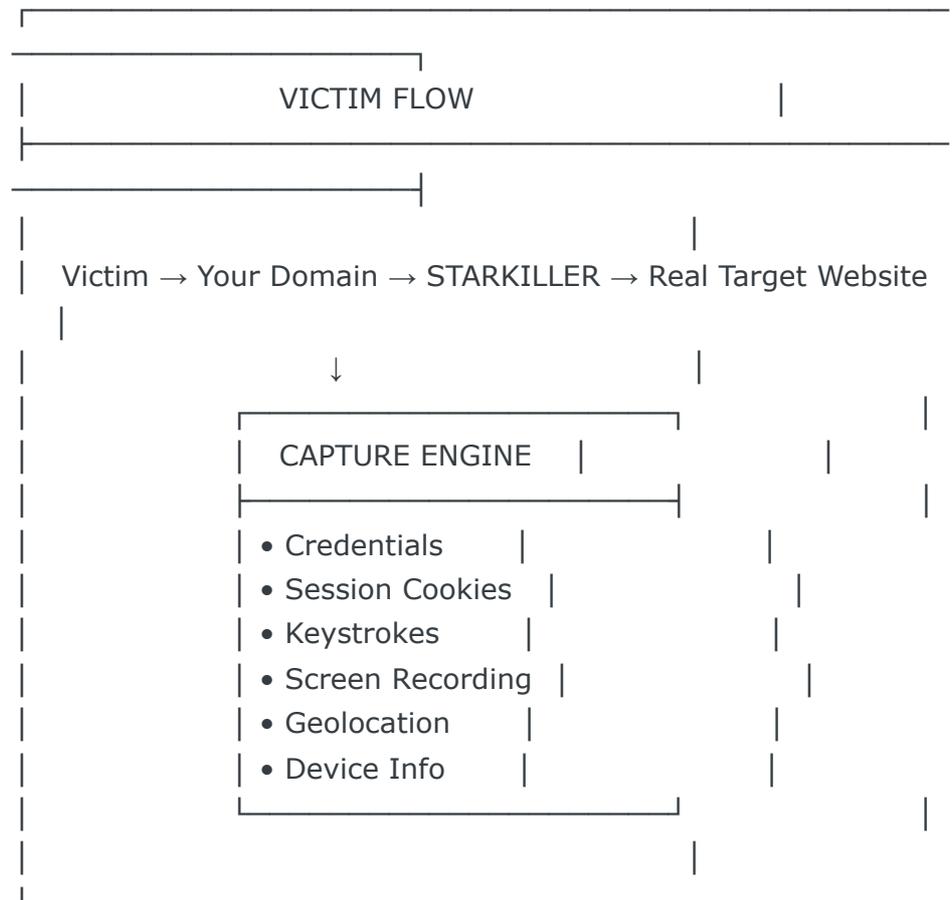

| ****ALERT**** | Display custom JavaScript alerts |

| ****INJECT_HTML**** | Inject custom HTML/forms into the page |

| ****BROADCAST**** | Send commands to ALL active victims |

 TECHNICAL ARCHITECTURE

````

...

### ### Container Isolation

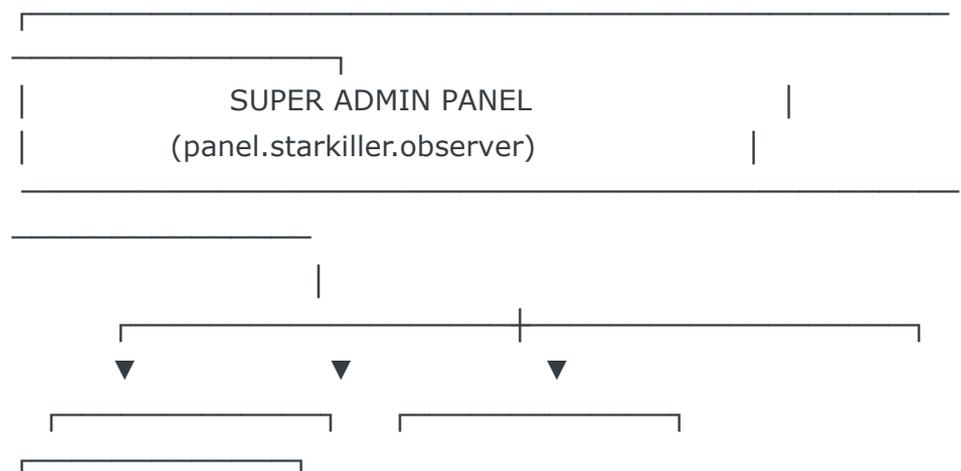

Each victim session runs in its own **\*\*isolated Docker container\*\***:

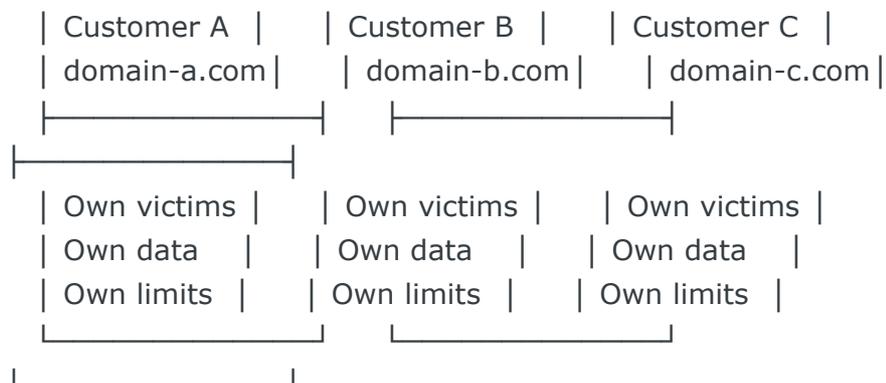

- Operational security guaranteed
- No cross-contamination between victims
- Clean environment per target
- Auto-cleanup on session end

### ### Resource Efficiency

- Containers spawn **\*\*on-demand\*\*** when victim connects
- Auto-terminate after configurable timeout
- Dynamic RAM allocation based on server capacity
- Horizontal scaling support

---

...

### ### Per-Customer Features:

| Feature                | Description                          |
|------------------------|--------------------------------------|
| **Custom Domain**      | Each customer uses their own domain  |
| **Data Isolation**     | Customers only see their own victims |
| **Auto SSL**           | Automatic Let's Encrypt certificates |
| **Unique Credentials** | Auto-generated login credentials     |

---

## ## ADVANCED PROTECTION SYSTEM

Built-in security against detection:

### ### Rate Limiting

...

- 60 requests/minute per IP
- Burst detection (20 requests in 2 seconds = instant block)
- 5-minute automatic block duration
- Manual unblock capability

...

### ### Scanner/Bot Blocking

...

Automatically blocks:

- Security scanners (Nmap, Nikto, etc.)
- Crawlers (Googlebot when malicious)
- Research tools (Censys, Shodan probes)
- Suspicious User-Agents

...

### ### DDoS Protection

...

- Connection flood detection
- Max connections per IP
- Auto-throttling
- Resource protection

...

---

## ## EMAIL CAMPAIGN ENGINE

Built-in phishing email sender:

| Feature | Description |
|---------|-------------|
|---------|-------------|

```
|-----|-----|
| **SMTP Configuration** | Use any SMTP server |
| **HTML Templates** | Rich HTML email support |
| **Variable Substitution** | {{name}}, {{email}},
{{firstName}}, etc. |
| **Bulk Sending** | Send to thousands of targets |
| **CSV Import** | Import recipient lists |
| **Campaign Tracking** | Logs all sent emails |
| **Delay Settings** | Configurable send delays |
```

---

## ## ADMIN DASHBOARD FEATURES

### ### Command Center

- Real-time statistics
- Active sessions counter
- Captured data counter
- System resource monitoring
- Protection status

### ### Active Targets (ACTIVE\_TARGETS)

- Live victim list with:
  - Session ID
  - Device type (Desktop/Mobile/Tablet)
  - IP Address
  - Country + Flag
  - City
  - Browser info
  - Session duration
  - Last activity
- One-click screen monitoring
- Session termination
- Command sending

### ### Harvested Data (HARVESTED\_DATA)

- All captured sessions
- Cookies viewer (JSON formatted)
- Keystroke logs with timestamps
- Downloaded files
- Export functionality
- Bulk delete

### ### Platform Control

- Start/Stop phishing infrastructure
- Target URL configuration
- Docker image management
- Container monitoring

### ### User Agent Filtering

- Blacklist mode (block specific UAs)
- Whitelist mode (only allow specific UAs)
- Pattern matching support

### ### Settings

- SMTP configuration
- Password management
- Session timeout
- Protection toggles

---

### ## CYBERPUNK UI DESIGN

STARKILLER features a stunning cyberpunk-themed interface:

- Dark mode only
- ⚡ Neon accent colors (cyan, magenta, red)
- Smooth animations
- Orbitron & Share Tech Mono fonts
- Matrix rain background effects
- Fully responsive design
- Real-time toast notifications
- Animated statistics

---

### ## FULL FEATURE MATRIX

| Category       | Feature                    | Status |
|----------------|----------------------------|--------|
| **CORE**       | Live Browser Rendering     | ✔      |
| **CORE**       | Credential Interception    | ✔      |
| **CORE**       | Session Cookie Theft       | ✔      |
| **CORE**       | 2FA/MFA Bypass             | ✔      |
| **CORE**       | Keystroke Logging          | ✔      |
| **MONITORING** | Live Screen Capture (VNC)  | ✔      |
| **MONITORING** | Geolocation Tracking       | ✔      |
| **MONITORING** | Device Fingerprinting      | ✔      |
| **MONITORING** | Real-time Activity         | ✔      |
| **C2**         | Browser Redirect           | ✔      |
| **C2**         | Fake Notifications         | ✔      |
| **C2**         | Alert Injection            | ✔      |
| **C2**         | HTML Injection             | ✔      |
| **C2**         | Broadcast Commands         | ✔      |
| **INFRA**      | Docker Container Isolation | ✔      |
| **INFRA**      | Auto SSL Certificates      | ✔      |
| **INFRA**      | Custom Domain Support      | ✔      |
| **INFRA**      | Nginx Auto-Config          | ✔      |
| **SAAS**       | Multi-Tenant Support       | ✔      |
| **SAAS**       | Customer Management        | ✔      |
| **SAAS**       | Per-Customer Limits        | ✔      |
| **SAAS**       | Order Management           | ✔      |
| **PROTECTION** | Rate Limiting              | ✔      |
| **PROTECTION** | Scanner Blocking           | ✔      |
| **PROTECTION** | DDoS Protection            | ✔      |

- | **\*\*PROTECTION\*\*** | Path Protection |  |
- | **\*\*EMAIL\*\*** | SMTP Integration |  |
- | **\*\*EMAIL\*\*** | HTML Templates |  |
- | **\*\*EMAIL\*\*** | Bulk Campaigns |  |
- | **\*\*EMAIL\*\*** | Variable Substitution |  |
- | **\*\*UI\*\*** | Cyberpunk Theme |  |
- | **\*\*UI\*\*** | Real-time Updates (WebSocket) |  |
- | **\*\*UI\*\*** | Mobile Responsive |  |

---

### EVILENGINE\_CORE

Revolutionary EvilEngine makes phishing links completely undetectable. Advanced obfuscation bypasses all security scanners, Safe Browsing, and email filters. Zero detection rate.

NEW

### TOTP\_AUTHENTICATION

Military-grade Time-based One-Time Password authentication. Generate secure 6-digit codes via Google Authenticator. No passwords stored - maximum security.

It's scary to imagine what's in the code if you didn't even bother to write the post yourself. I'd be very surprised if anyone wanted to work with this.

Please do not fall for this scam. The product does not do 10% of the claims advertised by the seller. I am surprised the post has not been taken down yet. It looks like a video game for 5 year olds. It does not work 1 bit. Not to mention the fact that the seller gave a cracked version of pulsar that doesn't work. The ripper blocked me on TG after I caught him in his lies. Run away
