

How to use Multhit:

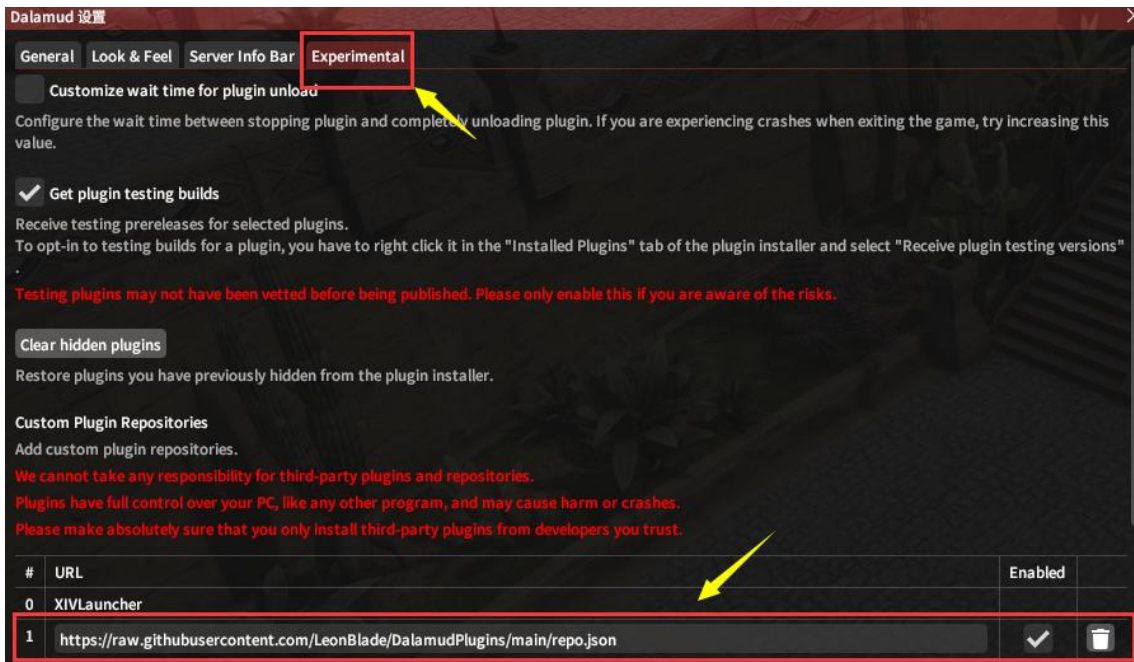

First let's thanks for Bluefissure's programming to let our dream come true !

If you want use multhit function, Please follow the following steps:

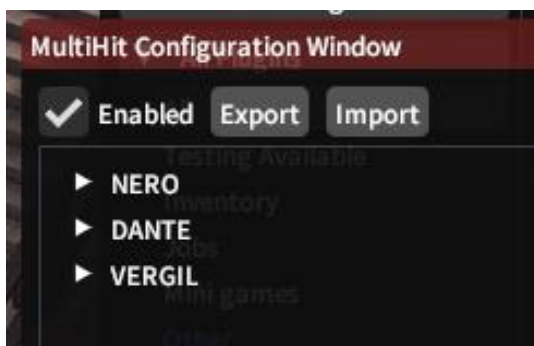

1. Install by adding 3rd party repo:(remember to press"save")

CN server: <https://raw.githubusercontent.com/Bluefissure/MultiHit/CN/repo.json>

Gobal server: <https://raw.githubusercontent.com/Bluefissure/MultiHit/master/repo.json>

2. Install the" [XXXX]Multhit patch=多段伤害包" .It will adapt all skills to fit multhit preset.
If you use penumbra,please set it a higher priority than the original modpack.
If you use texttools,please install it after you intall the original modpack.
3. Use Multhit plugin to import the preset json files in "Multhit Presets=分段伤害预设"folder.

And Remember apply changes

※ If you ensure that you follow the correct steps to install and use multhit, but the time of flytext still cannot match the action, please check your network delay.Multhit is recommended for use in low network delay environments.

If you need more help with plugins or report bugs, please refer to.
