Breach: true

Name: MySpace

Website: myspace.com

Bio: In approximately 2008, MySpace suffered a data breach that exposed almost 360 million accounts. In May 2016 the data was offered up for sale on the "Real Deal" dark market website and included email addresses, usernames and SHA1 hashes of the first 10 characters of the password converted to lowercase and stored without a salt. The exact breach date is unknown, but analysis of the data suggests it was 8 years before being made public.

Creation Date: 2008-07-01T00:00:00

Breach: true

Name: Collection #1

Bio: In January 2019, a large collection of credential stuffing lists (combinations of email addresses and passwords used to hijack accounts on other services) was discovered being distributed on a popular hacking forum. The data contained almost 2.7 *billion* records including 773 million unique email addresses alongside passwords those addresses had used on other breached services. Full details on the incident and how to search the breached passwords are provided in the blog post [The 773 Million Record "Collection #1" Data Breach](https://www.troyhunt.com/the-773-million-record-collection-1-data-reach).

Breach: true

Name: Data Enrichment Exposure From PDL Customer

Bio: In October 2019, [security researchers Vinny Troia and Bob Diachenko](https://www.troyhunt.com/data-enrichment-people-data-labs-and-another-622m-email-addresses) identified an unprotected Elasticsearch server holding 1.2 billion records of personal data. The exposed data included an index indicating it was sourced from data enrichment company People Data Labs (PDL) and contained 622 million unique email addresses. The server was not owned by PDL and it's believed a customer failed to properly secure the database. Exposed information included email addresses, phone numbers, social media profiles and job history data.

Breach: true

Name: Wattpad

Website: wattpad.com

Bio: In June 2020, the user-generated stories website Wattpad suffered a huge data breach that exposed almost 270 million records. The data was initially sold then published on a public hacking forum where it was broadly shared. The incident exposed extensive personal information including names and usernames, email and IP addresses, genders, birth dates and passwords stored as bcrypt hashes.

Breach: true

Name: Not SOCRadar

Bio: In August 2024, over 332M rows of email addresses were posted to a popular hacking forum. The post alleged the addresses were scraped from cybersecurity firm SOCRadar, however an investigation on their behalf concluded that "the actor merely utilised functionalities inherent in the platform's standard offerings, designed to gather information from publicly available sources". There is no suggestion the incident compromised SOCRadar's security or posed any risk to their customers. In total, the data set contained 282M unique addresses of valid email address format.
