

1 - Final Conclusions

Don't get the vaccine. But if you have to get a vaccine, get Novavax, and do it early in the morning. Novavax is less likely to go bad due to mishandling or weather. And, you will not risk turning your body, organs, and DNA, into a spike-protein making machine, messing up your immune system.

2 - Essential Knowledge

Some Definitions

All Cause Mortality = Death from any cause in a trial

All Cause Mortality is an important measurement when considering whether a treatment saves lives

Lipid Nanoparticles

All of the vaccines wrap up their contents in "Lipid Nanoparticles". These are basically tiny particles that allow the vaccine contents to hide from your immune system, and to travel throughout the whole body... including the brain. Its like a car that carries the contents to enter inside of body cells.

The Immune System and White Blood Cells

Vaccines

Vaccines work by training your immune system to recognize and defeat certain proteins

You vs Not You

The immune system attacks anything that's not you. When your body starts making things (spike proteins) that are not you, your immune system can get confused and attack your own body.

Antibodies and Antigens

Antigens are bad things in your blood. Antibodies are proteins that disable the bad things found in your blood.

Antibody **titers** are the amount of certain antibodies in your blood. [According to the FDA](#) measuring titers is not a reliable way to determine how much protection someone has against a virus.

An **adjuvant** is an additive that stimulates the immune system. They are often added to vaccines. Heavy metals are poisonous but used in Pfizer and Moderna. Novavax uses [tree bark](#).

T cells and B cells

Your body's military when a problem occurs. There are two primary types:

- T Cells
 - Do many things. Most importantly, they destroy target cells.

- B cells
 - B cells make antibodies

Once your body figures out how to make antibodies that work against a certain disease, it starts mass-producing B cells that have the capability to make these antibodies.

Diminishing Titers

Antibodies diminish over time. This is normal. [They are supposed to wane over time](#). Otherwise it's like your body is going to war all the time without rest. It is an indicator that you are healthy again.

Memory cells

Even after your titers decrease, your body retains something called "Memory B cells" and "Memory T cells". They are cells that stay with you for a long time - possibly your whole life. These cells remember how to fight specific infections. They will remain inactive until the antigen starts showing up in your body again.

5 - Preliminaries

- The lead scientist who first invented the mRNA technology used in these vaccines, named Dr Robert Malone is extremely against these mRNA vaccines[\[1\]\[2\]\[3\]\[4\]](#)
- Pfizer director states at [European parliament](#) that they didn't test whether the vaccines prevent transmission.
- [NY Supreme court declares](#) that the vaccines don't prevent covid, nor prevent transmission.
- The vaccinated carry just as much (or more) virus as the unvaccinated [\[1 - Open Forum Infectious Diseases\]](#) [\[2 - PLOS Pathogens\]](#)
- [Here is a collection](#) of 30 publications showing that Natural Immunity is strong and long lasting
- A publication in the [Archives of Medical Research](#) claims that Vitamin D is an effective way for doctors to prevent themselves from getting covid-19
- [A publication in the Lancet](#) also shows that the vaccinated carry just as much virus, and transmit just as well as the unvaccinated
- [Natural Immunity against Omicron also works on Delta](#)
- A [Lancet publication](#) shows there is no benefit to vaccination. Covid problems decrease a little, but there is an increase in heart problems that make it not worth it
- The plethora of news articles across the world seems to suggest that vaccination does not prevent covid. (See Appendix)
- Early treatments of COVID are easily accessible. [Here is a summary of analyses on treatments](#)

6 - Some Results

Get Vaccines in the early morning

Some Vaccines (including Pfizer and Moderna) go bad extremely quickly after warming up or being opened. So get the vaccine early in the morning, so you get the first dose out of the vial.

Novavax has less risk of going bad

mRNA is very fragile, making Pfizer and Moderna go bad more easily, especially if they are mishandled. Novavax has less risk on this because it has no mRNA, so it can encounter warmer temperatures.

After Covid-19, your body keeps the ability to fight infection

Current research shows that we do not lose our COVID-19 immune system memory cells over time. [[1-Nature](#)] [[2- Clinical Infectious Diseases Journal](#)]

Previous Infection protects similarly to the vaccines

Unless you get all three doses + booster boosters (so 4 in total). Then, altogether the vaccines are at best only about 25% more effective. [New England Journal of Medicine](#)

Previous Infection protects against severe covid

Evidence suggests that after COVID-19, you are 100% protected from severe COVID of the same same variant

Conclusions drawn from data from the [New England Journal of Medicine](#)

Two doses of Pfizer makes you more susceptible to Omicron

[New England Journal of Medicine](#)

Pfizer has some deadly batches

All vaccines are made in batches called "lots". Analyzing publically available data, certain individuals found (and it was professionally reviewed in [Surgical Neurology International](#)) that some lots of Pfizer vaccines are much much deadlier than others. Almost all deaths from Pfizer injections are from these lots. Pfizer's response to this was to start spreading out the lots to different places.

Other findings from the same publication:

- Vaccinated people without symptoms spread the virus just as much as the unvaccinated who have symptoms
 - Vaccines are weak against new variants
 - Vaccines "fade over time" (It's actually your immune system)
 - Vaccines suppress your immune system for a long time
-

The major problems of the vaccines are:

1. Myocarditis
 2. The Spike protein causing Blood Clots
 3. Vaccine Induced Auto Immune Disease (VAIDS)
 4. Antibody Dependent Enhancement (ADE)
 5. Unexpected stuff found in the vaccine
 6. Vaccines going bad (rf. Inconsistent Lots)
 7. SADS and Excess Death
-

Johnson & Johnson and Astrazeneca reduce All Cause Mortality

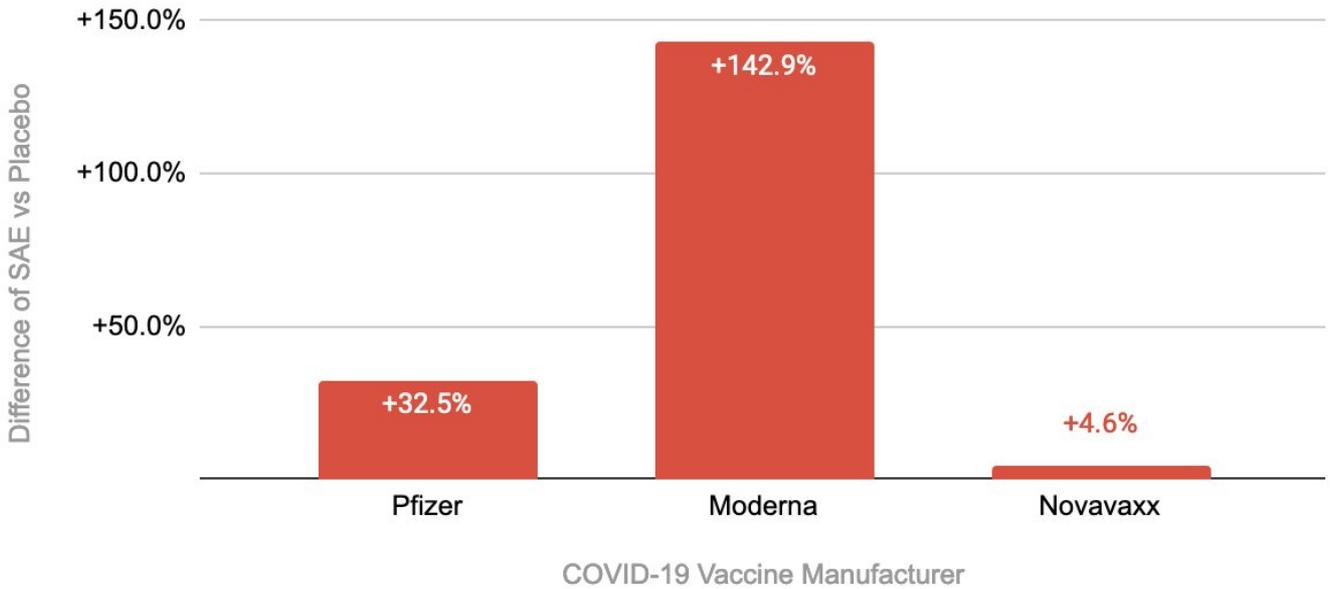

A publication in the Lancet found that these two vaccines actually [reduce All Cause Mortality](#), but mRNA vaccines do not. Since mRNA vaccines supposedly reduce death by covid, this means people who take mRNA vaccines end up dying from something else, likely vaccine related.

Moderna has the worst SAEs.

Disclaimer: I couldn't find the source for this chart.

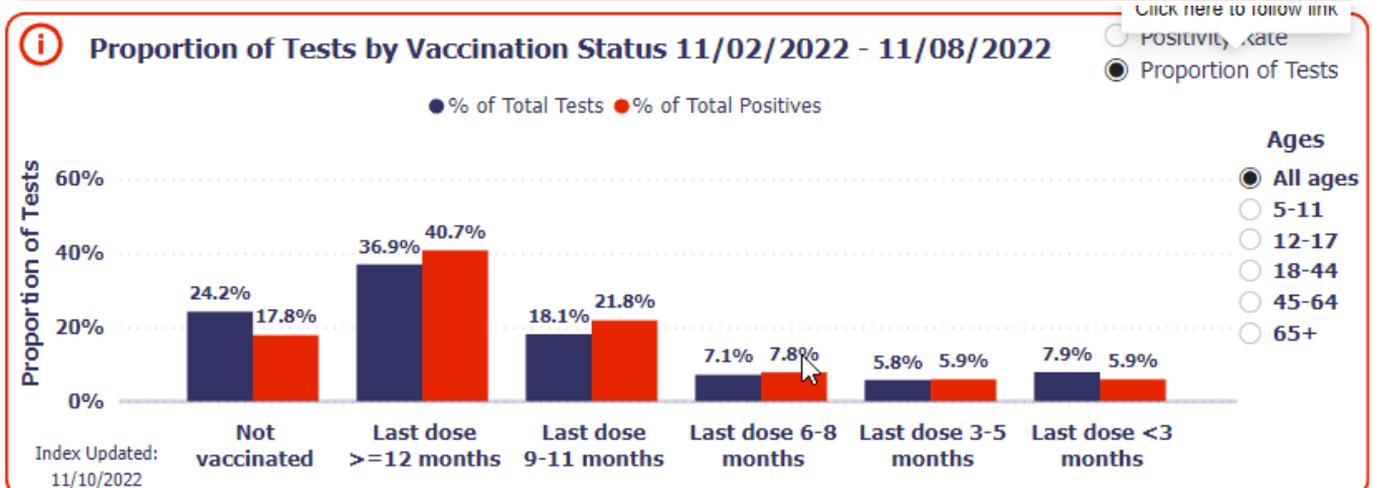

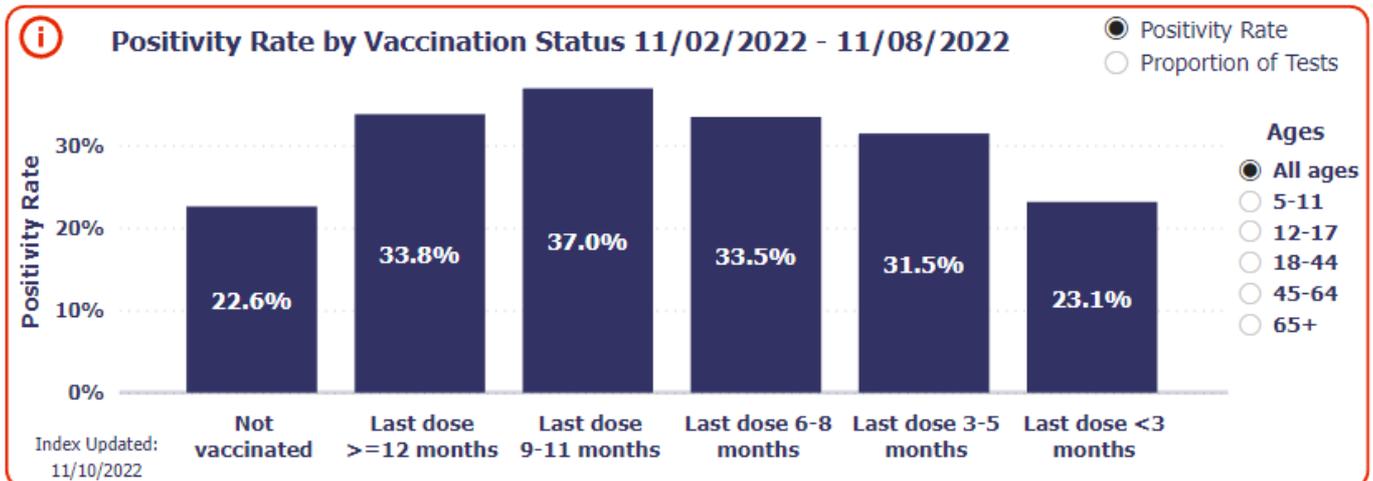

Serious Adverse Events (SAE) by Manufacturer

vs. Placebo Group; Source Manufacturer RCT studies

Unvaccinated are least likely to test positive for covid

[Daily data](#) from walgreens shows unvaccinated people are more likely to test negative than any other group.

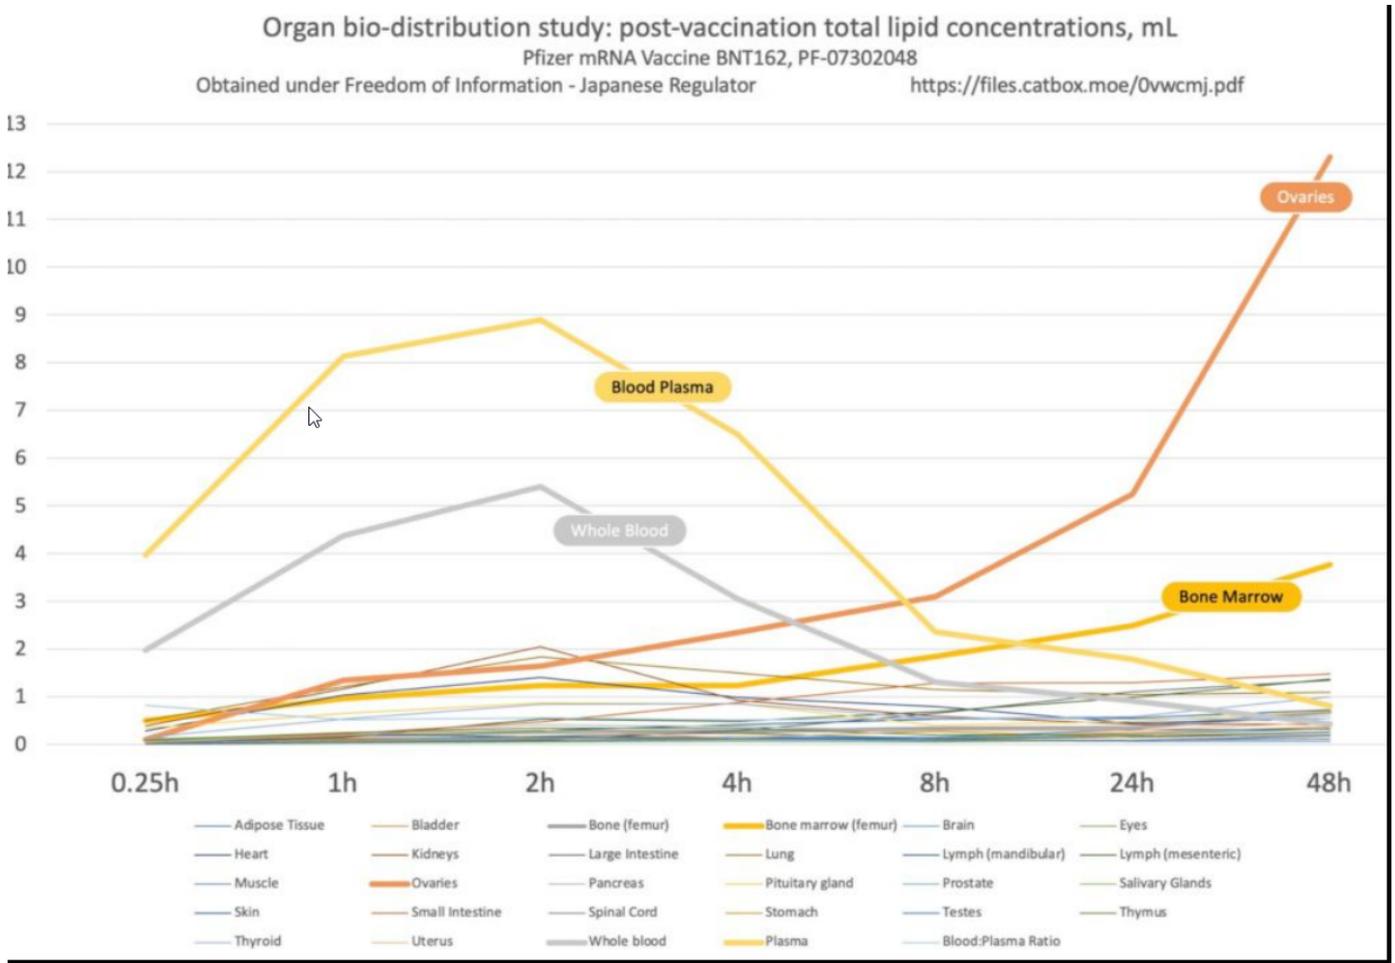

Covid Vaccinations lengthen period cycle ([Link](#))

Covid Vaccinations decrease Male Fertility ([Link](#))

The vaccine travels throughout the whole body, and settles in ovaries

They don't just stay near the injection site like a normal vaccine

7 - Spike Protein & Blood Clots

[Dr. Michael Palmer and Dr. Sucharit Bhakdi of Doctors for Covid Ethics](#) show the following:

1. mRNA vaccines spread through the body and **accumulate in organs**
 2. mRNA vaccines cause you to **continually** make spike proteins
 3. Spike proteins from the vaccine cause autoimmune-like inflammation.
 4. Organ Inflammation from the vaccine can cause damage, sometimes death.
-

A peer reviewed [Swedish study](#) showed:

We also show that BNT162b2 mRNA is reverse transcribed intracellularly into DNA in as fast as 6 h upon BNT162b2 exposure.

This means the mRNA vaccines somehow modify your DNA to include the spike protein.

Someone at Masonic Medical Research Institute, NY, performed a test and showed the spike protein [causes an immune response in heart cells](#).

The journal "Vaccines" [published a paper](#) showing spike protein specifically from vaccines, not covid, have been found in the heart and brain of dead people. The publication says it supports other findings of brain inflammation caused by covid-19 vaccines.

[Journal of Hematology & Oncology](#), ie journal of "blood study" found that, specifically spike proteins from vaccines (that is, spikes without the virus "ball" part) interacts with blood cells and causes clots.

[Journal of Cardiovascular Diabetology](#) found that

The spike protein damages red blood cells causing them to stick together and form very foot-long blood-clots.

A publication in the journal [Circulation Research](#) has found that the spike protein damages blood vessels (veins and arteries)

A publication in [Immunology and Inflammation](#) and a publication in [Journal of Biological Chemistry](#) have both found that the spike protein causes blood vessels to release "cytokines" that cause inflammation to your blood vessels.

A publication in [Frontiers in Cardiovascular Medicine](#) found that spike proteins break the connection between blood vessels cells (aka damages them)

A publication in [Viruses](#) has found that the spike protein interferes with blood vessels and metabolism in the brain - resulting in "brain fog" and "brain slowness".

The spike protein causes a "domino", "snowball", or "cascade" of effects that result in substantial clotting. Sourced explanation of mechanism in the [Appendix](#)

In [an NCBI study](#), the spike protein causes blood vessels to release yet another thing (Angiotensin II) that [may cause heart inflammation or heart failure](#).

A [Bioscience Reports](#) study shows that the spike protein interferes with the usual way your body gets rid of blood clots.

A publication in [International Journal of Biological Macromolecules](#) found that the spike protein prevents another anti-blood clot mechanism

Spike protein [has been found in blood clots](#)

A publication in [Surgical Neurology International](#) finds that the spike protein damages cells' ability to repair its DNA.

[An NCBI publication in the journal Viruses](#) also finds that the spike protein prevents DNA repair

8 - Myocarditis

Myocarditis

Myocarditis is permanent damage to the heart muscle resulting in inflammation. There is no cure.

Myocarditis has a HUGE death rate over of 5-10 years. Babies have [mortality rate 50-70%](#). Everyone else has a 5-year mortality rate between 20% and 50%, varying dependent on severity of infection.[\[1\]](#) [\[2\]](#) [\[3\]](#) Though if one can survive past 5 years, long-term mortality rate is only 17-44%, and 7% if one survives more than 10 years.

[A publication in the bioRxiv](#) found that the vaccines RNA carriers (Lipid Nano Particles) are highly inflammatory

The damage can come from HIV, certain other viruses, or your own immune system attacking your heart. However, a study on 200,000 people has shown no connection between catching covid, and having Myocarditis ([Journal of Clinical Medicine](#)).

In 2021 the US CDC and FDA warned America and the world that the mRNA COVID-19 vaccines could result in heart inflammation or myocarditis.[\(FDA\)](#)

Exercise with Myocarditis can heart failure. Athletes and pilots are more likely to show symptoms. Causes "Sudden Death" during exercise or sleep. About half of cases don't show symptoms or warning signs. ([Tropical Medicine and Infectious Disease](#)).

The same study shows that after 2 Pfizer shots 2.3% developed Myocarditis. A more recent study as shown 2.8% overall and 3.7% in women develop myocardial lesions [European Society of Cardiology Congress \(Article Summary\)](#). The summary states that studies in the US miss many cases because the myocarditis does not exhibit itself right away, there's a delay.

A [Swiss study](#) shows that the chemical troponin is increased in EVERY person who is vaccinated. Troponin in the blood means only one thing: **Heart Damage**. If it gets bad enough it can develop into Myocarditis.

A peer-reviewed [Thai study](#) on 300 kids aged 13-18 showed 29.2% with heart problems after vaccination. And 2.3% of them had heart inflammation.

A "professional polling company" performed a survey of 500 people selected at random across America, and found 3.7% [have myocarditis after being vaccinated](#).

A [Nature publication](#) found that people with the moderna shot are nearly 4 times as likely to get myocarditis as people with the Pfizer shot. Both of which are much more likely than unvaccinated

individuals.

[Major athletes across America were scanned for Myocarditis](#). It was found that about half have not yet shown symptoms.

A publication in [Metabolism Open](#) finds that myocarditis can be caused by the lipid nanoparticle of these vaccines because they allow it to enter heart tissue.

9 - SADS SIDS and Excess Death

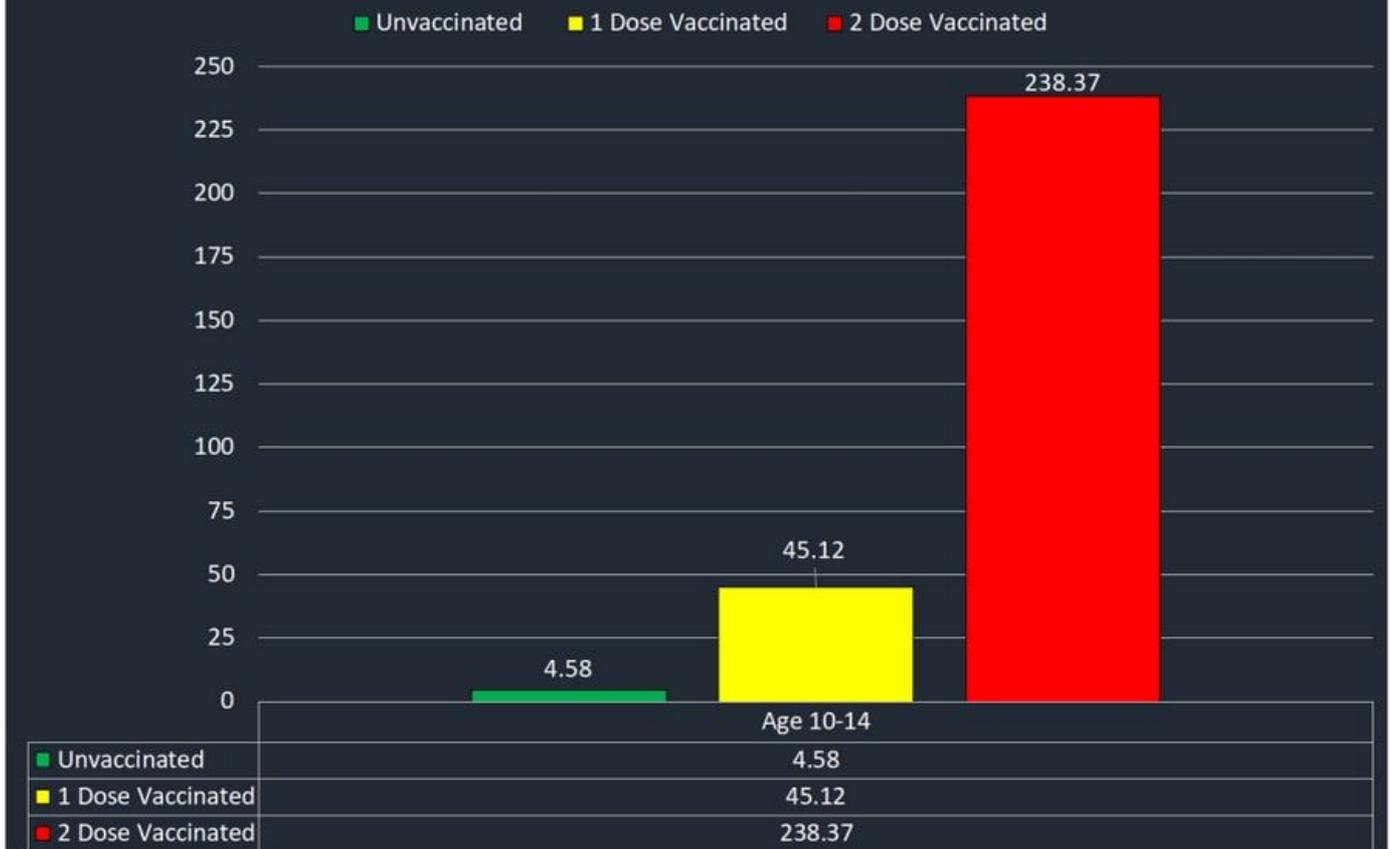

The [Department of Defence](#) medical database shows the following increase after the military required vaccinations:

1048% *Neurological Disorders*
279% *Miscarriages*
487% *Breast Cancer*
155% *Birth Defects*
350% *Male Infertility*
369% *Testicular Cancer*
2181% *Hypertension*
664% *Malignant Neoplasms*
680% *Multiple Sclerosis*
551% *Guillain-Barre Syndrome*
468% *Pulmonary Embolism*
302% *Tachycardia*
452% *Migraines*
471% *Female Infertility*
437% *Ovarian Dysfunction*
269% *Myocardial infarction*
291% *Bell's palsy*
467% *Pulmonary Embolism*

The UK office of National Statistics shows substantially increased death rate among most vaccinated age groups through 2021. Especially children.

Age-standardised mortality rates by Vaccination Status, per 100,000 person-years, England, Age 10-14, deaths occurring between 1 January 2021 & 31 October 2021

Source - Office for National Statistics, Deaths by vaccination status Dataset, England

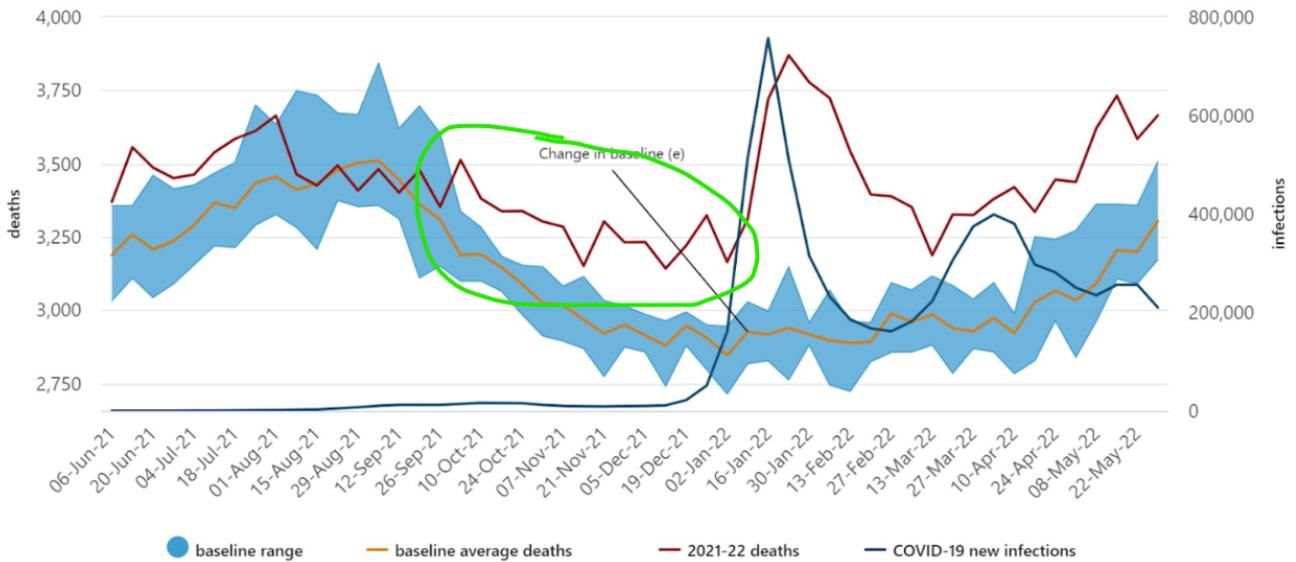

A [JAMA Cardiology](#) publication on a study on **23 million** residents of scandinavian countries found that for males between the ages 16-24, hospitalization is 28x more likely after a vaccine, than after covid.

A [John Hopkins](#) based study shows that for college-aged people, mRNA vaccines are almost 100 times more likely to cause serious injury than to prevent covid hospitalization

[More than 769 athlets between March 2021 - March 2022](#) collapsed on the field. All vaccinated, 890 have had heart attacks and 579 have died.

The Health Advisory and Recovery Team (HART) [makes the argument](#) that the excess deaths in Australia before COVID spread could only have been caused by the vaccines.

All deaths, COVID-19 infections, Australia, 31 May 2021 - 29 May 2022 vs baseline benchmarks

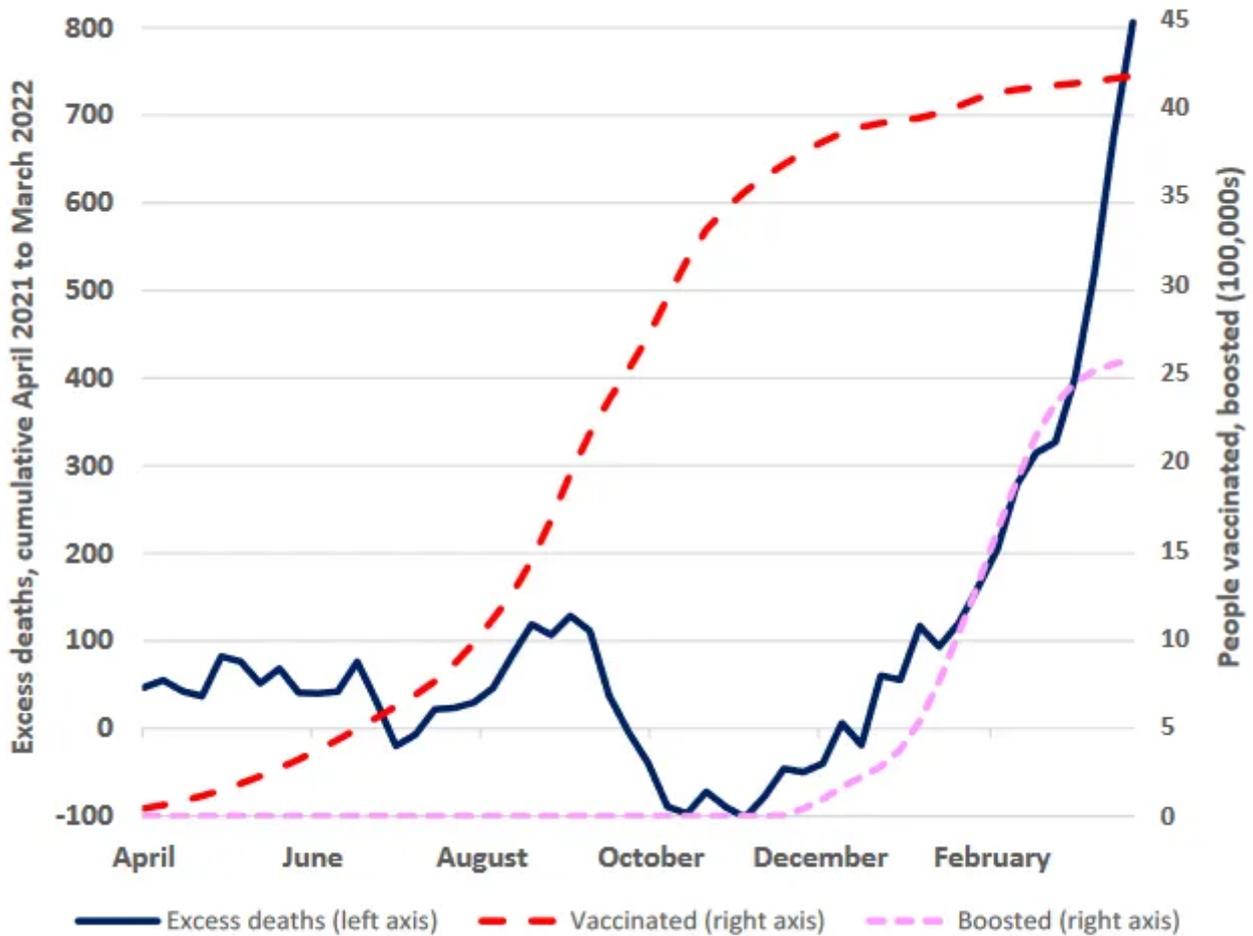

a. Data is by occurrence.
 b. Data is provisional and subject to change.
 c. Weeks are defined as seven-day periods which start on a Monday as per the ISO week date system. Refer to 'Weekly comparisons' on the methodology page of this publication for more information regarding the data in this graph.
 d. Data for the number of COVID-19 infections has been sourced on 3 August 2022 from the COVID-19 daily infections graph published on the Australian Department of Health website.
 e. The baseline includes deaths from 2015-19 (for 2021) and from 2017-19 and 2021 (for 2022).

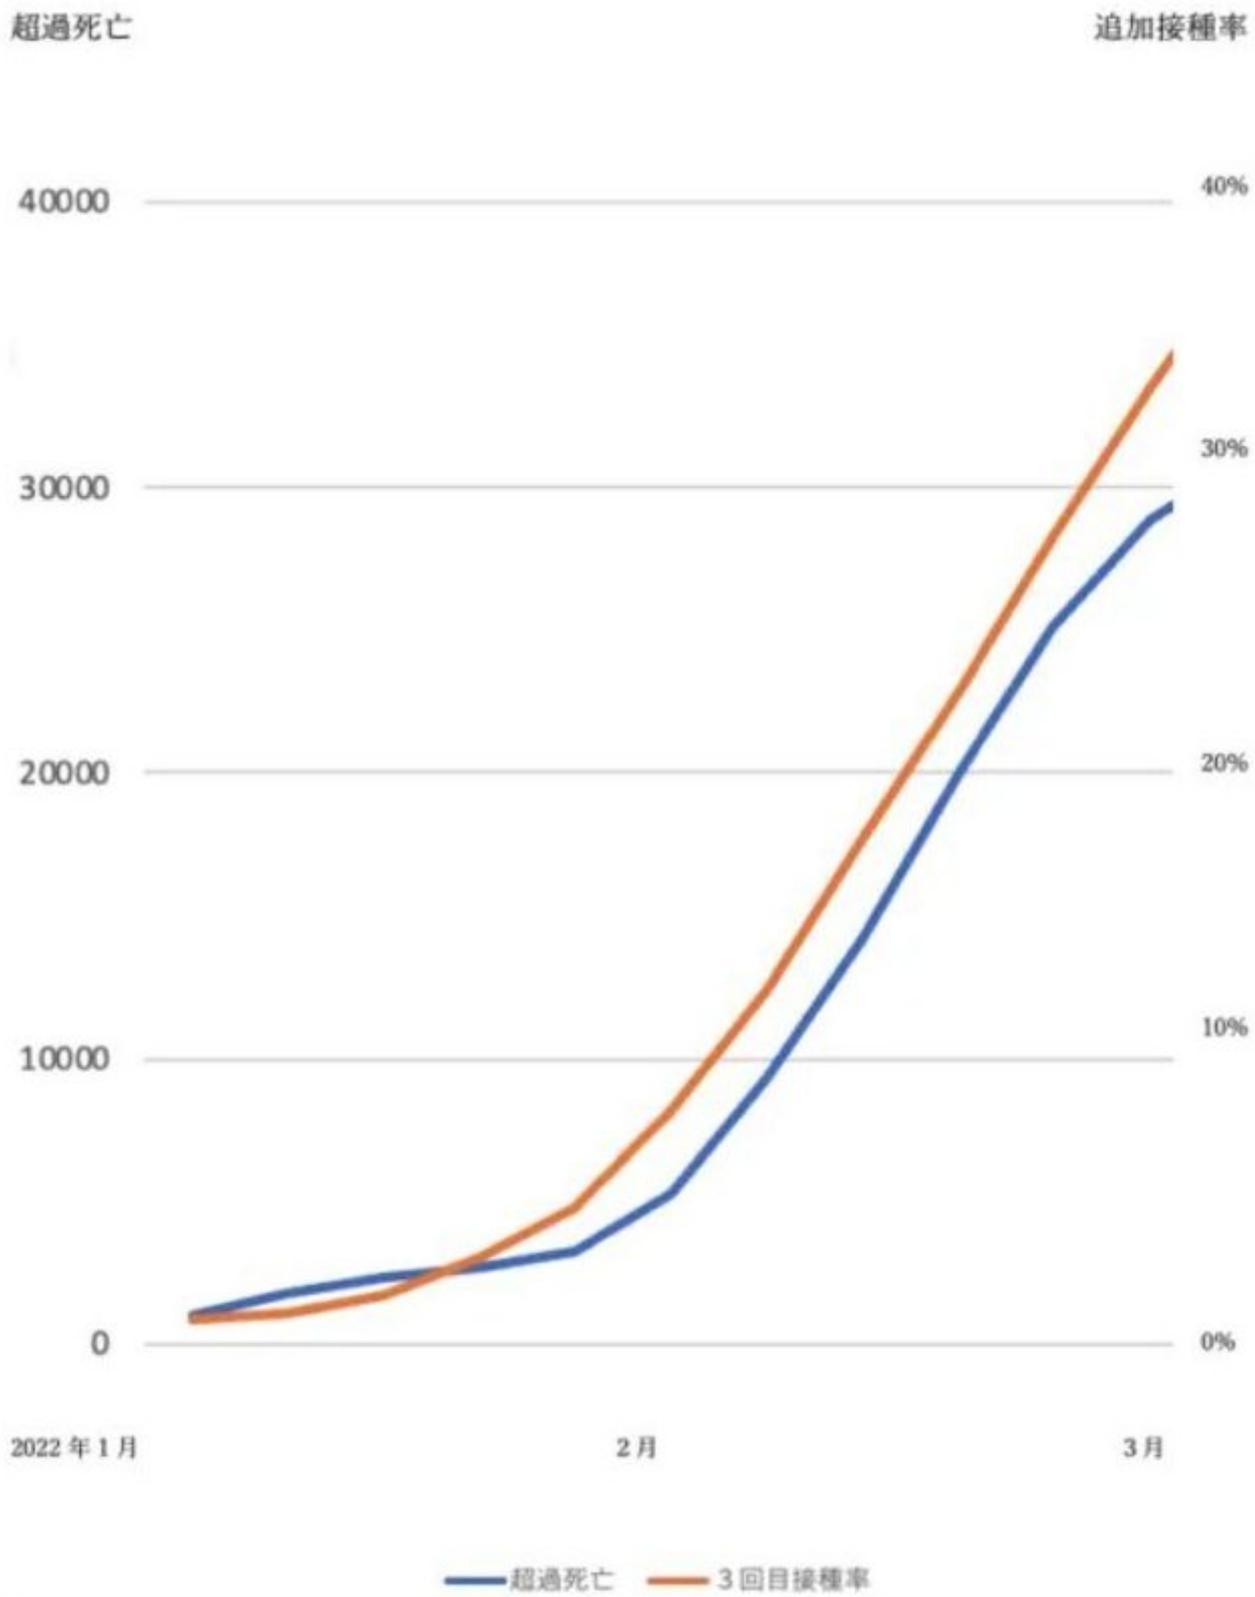

Source: Australian Bureau of Statistics, Provisional Mortality Statistics Jan - May 2022

[Reuters reports](#) that Aegon, a life insurance company, has paid out 2.58x as much during third quarter 2021 compared to third quarter 2020.

Others have also found correlation between the vaccines being administered and "excess deaths"

B) Cumulative Excess Deaths and COVID-19 Vaccine Rollout: April 2021 to March 2022

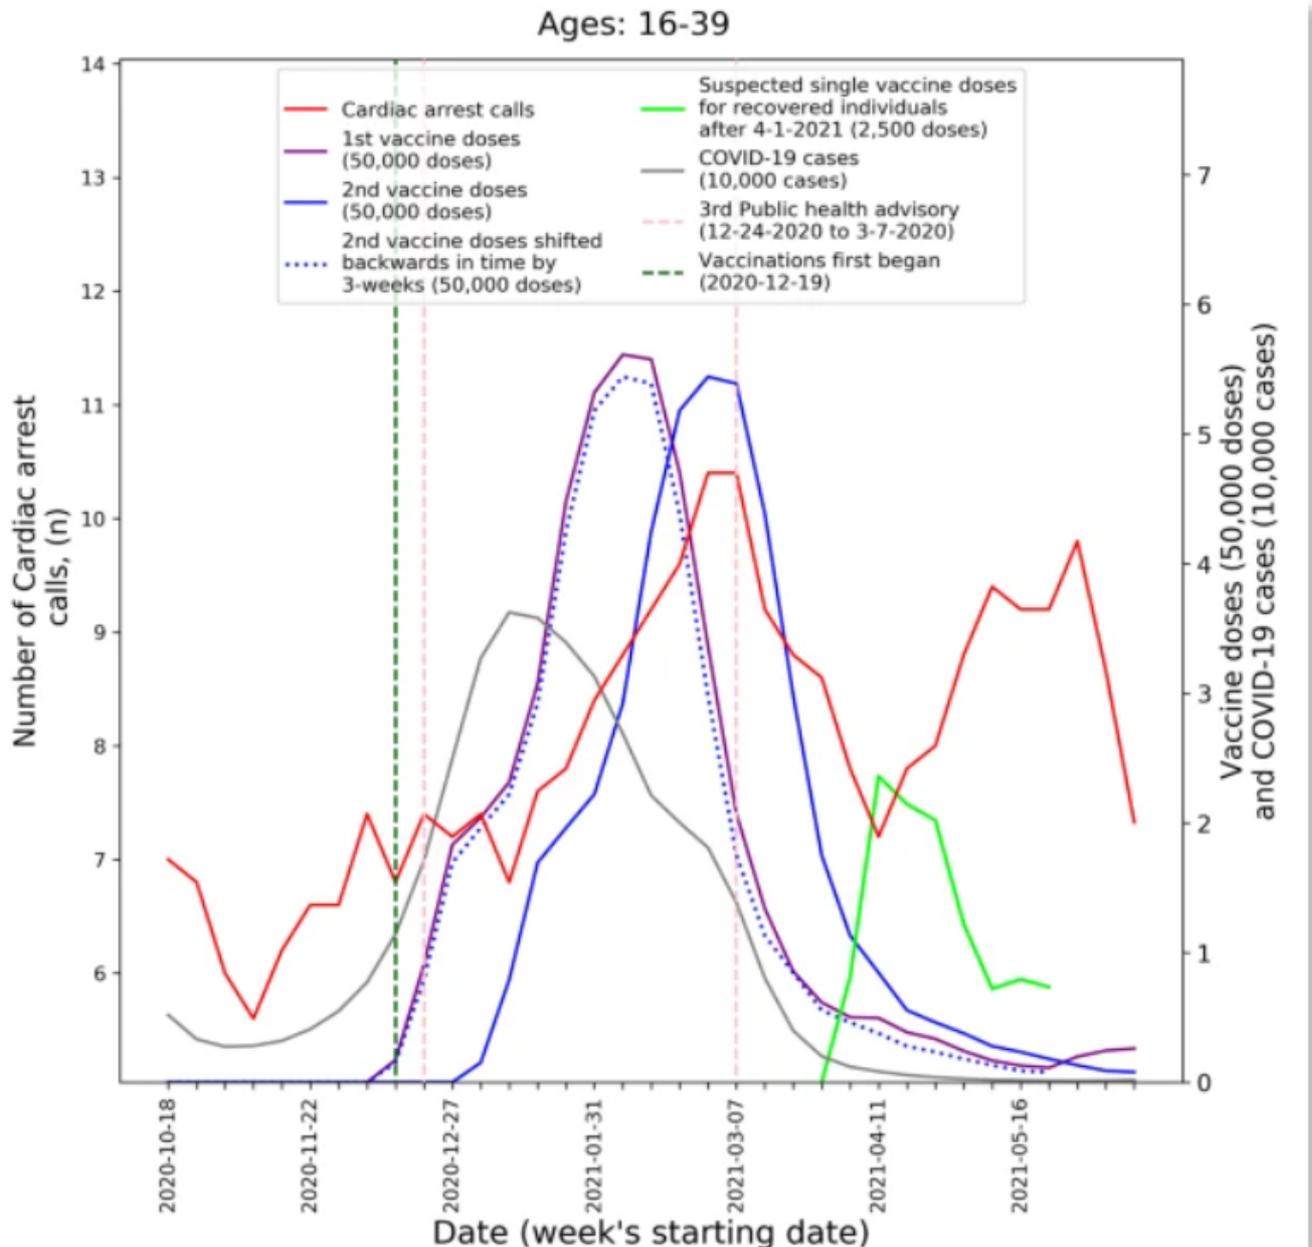

The orange line in the Japanese graph, above, is the vaccination booster rate. The blue line is cumulative excess deaths.

The author of this graph [argues that since](#) excess death is not observed in respiratory causes, these

deaths cannot be due to covid.

B

[According to Public Health Scotland](#), 85% of women are vaccinated, but of those giving birth only 43% are vaccinated.

10 - VAIDS and ADE

[The Lancet released a statement](#) that

“there is no evidence for lasting protective immunity to SARS-CoV-2 following natural infection” and that “the consequence of waning immunity would present a risk to vulnerable populations for the indefinite future.”

[This publication in Nature](#) states that the vaccines can actually help viruses get in our cells through a process called **antibody-dependent-enhancement** (ADE). It basically means your body can make harmful antibodies in response to vaccines - a common problem with all coronavirus (common cold) vaccines throughout history. [\[1\]](#) [\[2\]](#) [\[3\]](#) [\[4\]](#)

[This Centre for Research on Globalization](#) article claims that most of the damage on a body comes from it's own immune system attacking the cells that produce the spike protein (because they are not You). This is called **Vaccine-induced Auto-Immune Disease Syndrome** (VAIDs). All mRNA vaccines in the future will also probably cause VAIDS due to how they work.

[Journal of Hepatology](#) publication finds Pfizer and Moderna can cause hepatitis, an auto-immune disease.

[German Government Data](#) shows that vaccinated people's immune system are stopping working

[Data from Public Health Scotland](#) shows that vaccinated people are 3.3x as likely to die from infection as unvaccinated, and the risk of death if hospitalized is 2.15 times the unvaccinated

An article published in the journal [Food and Chemical Toxicology](#) states that these vaccinations decrease the body's ability to screen for cancer and fight infections

[Recent cdc data](#) shows there has only been 1532 covid deaths for children under 18, but just in the VAERS (which is likely underreported) there has already

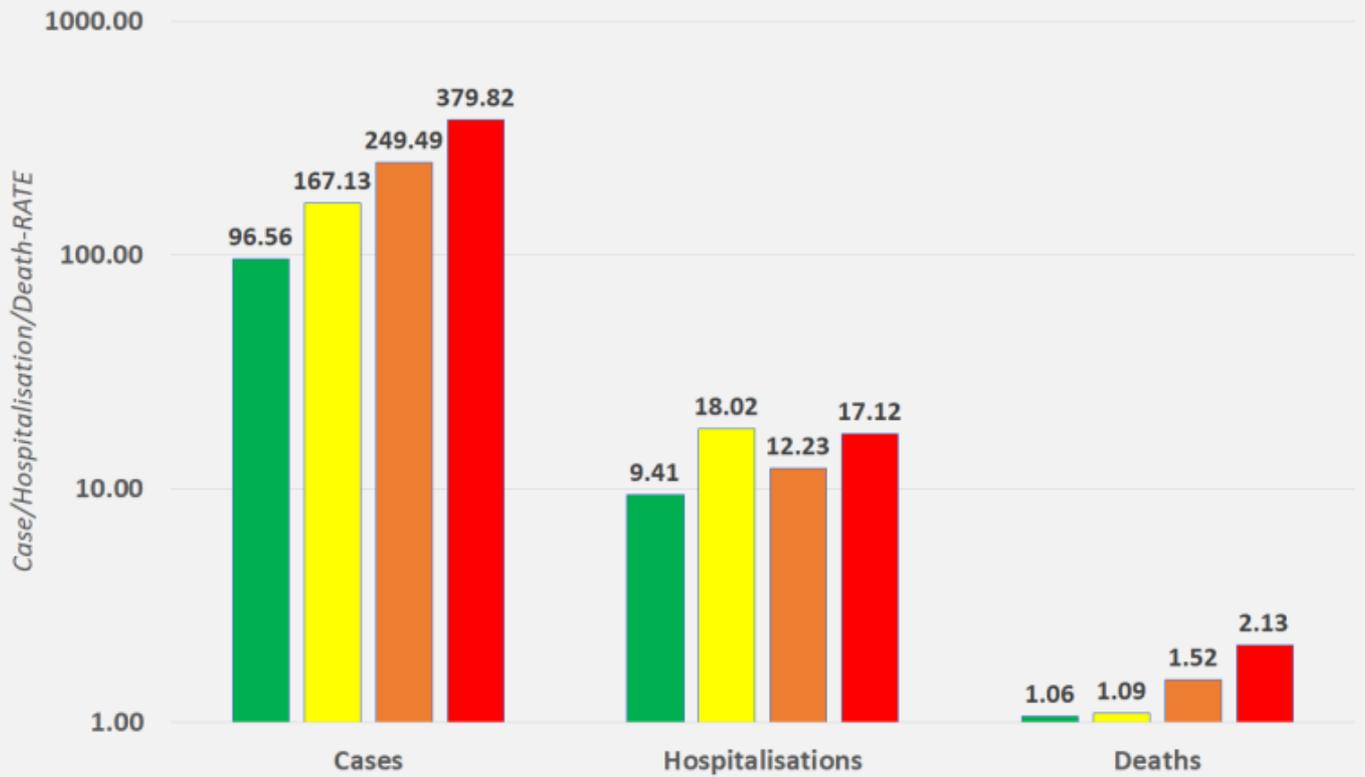

Outside of the trials, these vaccines are connected to increased overall death rates. Here is some data from the Canadian Government.

Covid-19 Case/Hospitalisation/Death-Rate per 100,000 Individuals by Vaccination Status in Canada

21st March to 10th April 2022

Source: Government of Canada Covid-19 Daily Epidemiology Update

■ Not Vaccinated ■ Partly Vaccinated ■ Double Vaccinated ■ Triple Vaccinated

[Here's a link](#) to the calculation of this chart.

[According to Danish study](#), having only 2 shots of Pfizer makes you much more likely to get Omicron:

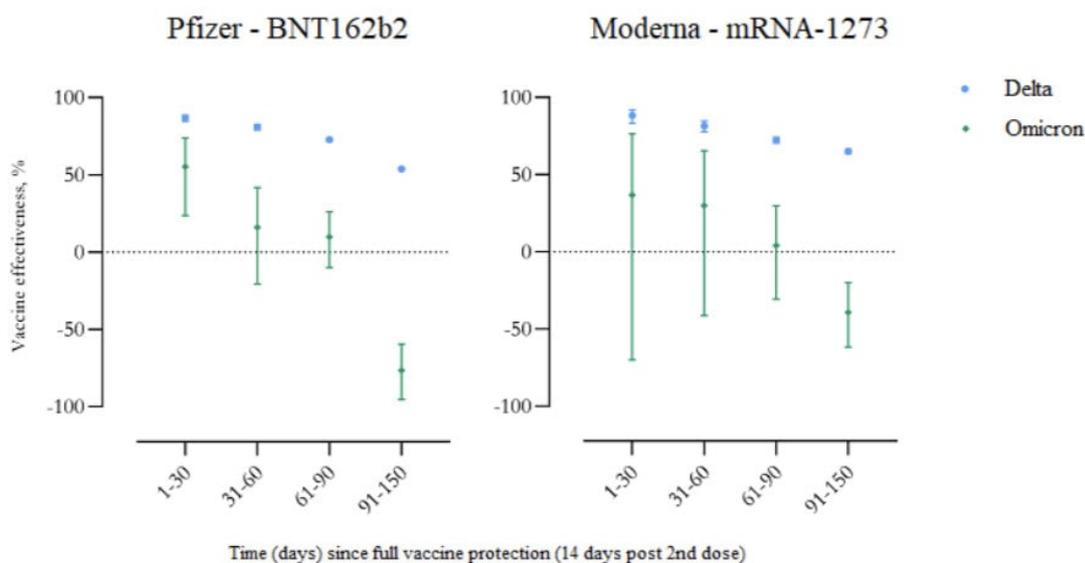

Figure Vaccine effectiveness against SARS-CoV-2 infection with the Delta and Omicron variants, shown separately for the BNT162b2 and mRNA-1273 vaccines. Vertical bars indicate 95% confidence intervals.

Table Estimated vaccine effectiveness for BNT162b2 and mRNA-1273 against infection with the SARS-CoV-2 Omicron and Delta variants during November 20 – December 12, 2021, Denmark.

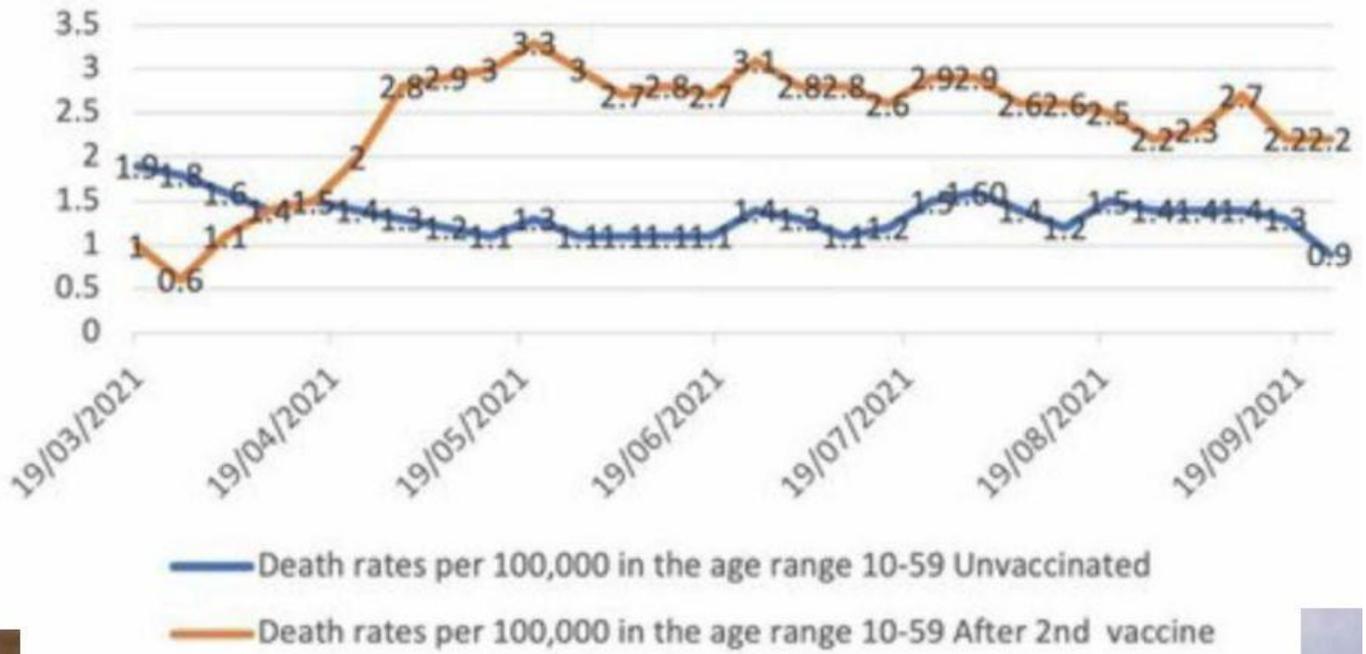

Time since vaccine protection	Pfizer – BNT162b2				Moderna - mRNA-1273			
	Omicron		Delta		Omicron		Delta	
	Cases	VE, % (95% CI)	Cases	VE, % (95% CI)	Cases	VE, % (95% CI)	Cases	VE, % (95% CI)
1-30 days	14	55.2 (23.5; 73.7)	171	86.7 (84.6; 88.6)	4	36.7 (-69.9; 76.4)	29	88.2 (83.1; 91.8)
31-60 days	32	16.1 (-20.8; 41.7)	454	80.9 (79.0; 82.6)	8	30.0 (-41.3; 65.4)	116	81.5 (77.7; 84.6)
61-90 days	145	9.8 (-10.0; 26.1)	3,177	72.8 (71.7; 73.8)	48	4.2 (-30.8; 29.8)	1,037	72.2 (70.4; 74.0)
91-150 days	2,851	-76.5 (-95.3;-59.5)	34,947	53.8 (52.9; 54.6)	393	-39.3 (-61.6;-20.0)	3,459	65.0 (63.6; 66.3)
1-30 days after booster vaccination								
protection	29	54.6 (30.4; 70.4)	453	81.2 (79.2; 82.9)	-	-	5	82.8 (58.8; 92.9)

CI = confidence intervals; VE = vaccine effectiveness. VE estimates adjusted for 10-year age groups, sex and region (five geographical regions). Vaccine protection was assumed 14 days post 2nd dose. Insufficient data to estimate mRNA-1273 booster VE against Omicron.

The UK government [Office for National Statistics](#) published this chart (Table 4) showing vaccinated people at most 59 years old

Death Rates 10-59 by Vaccine Status ONS Data

Published November 2021

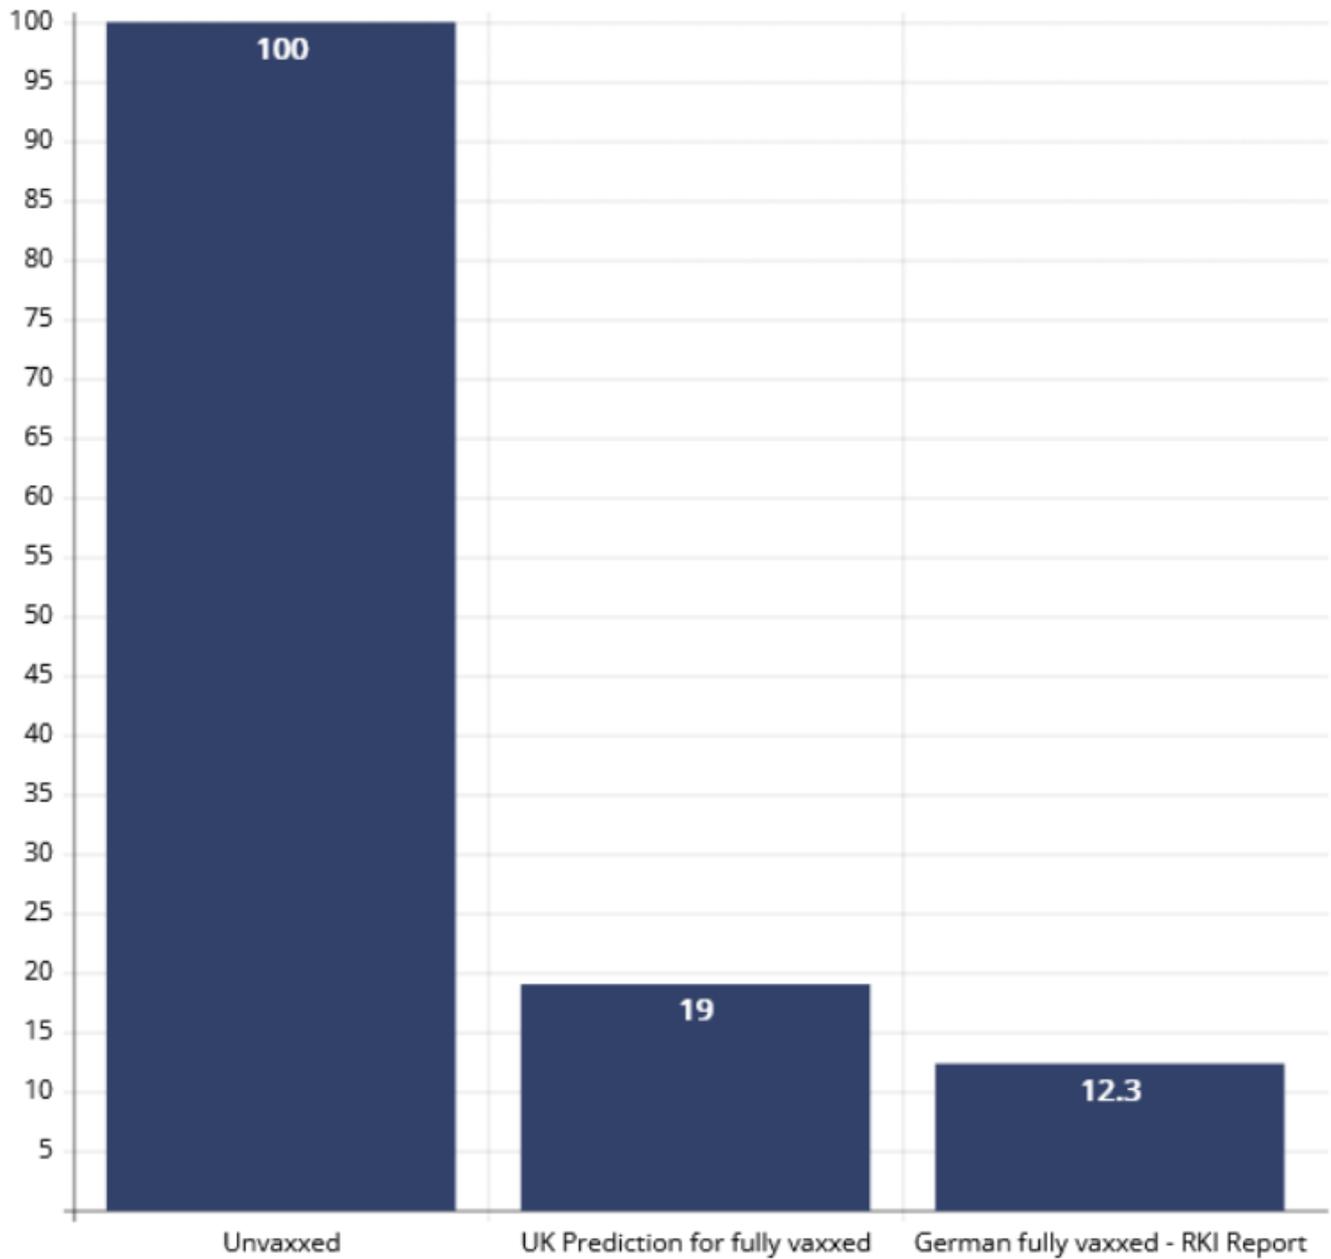

are dying twice as much as the unvaccinated.

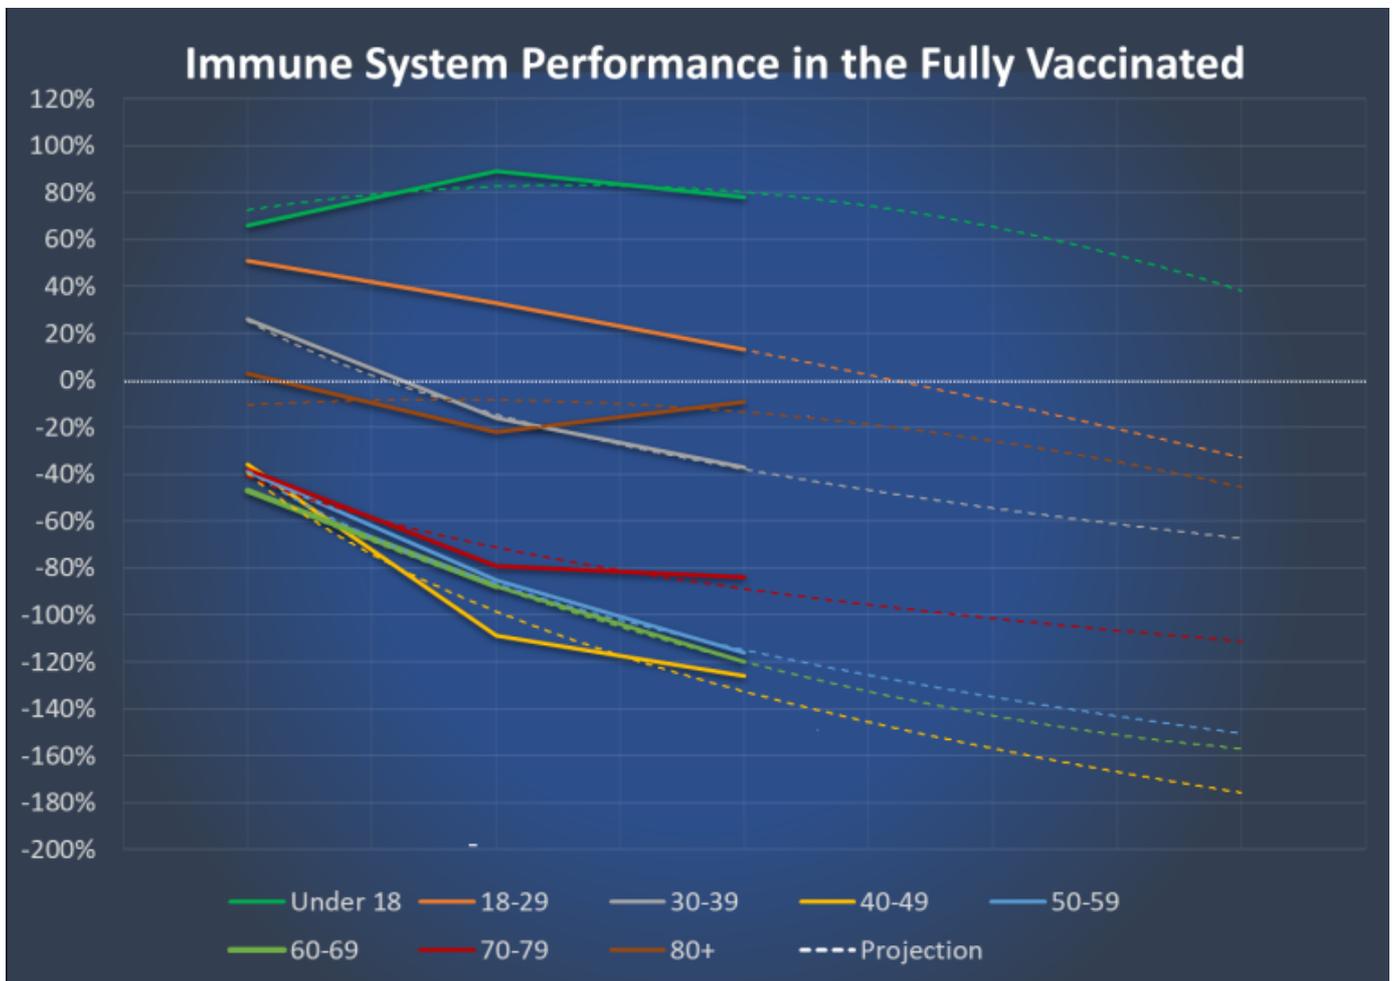

This chart from a [German study](#) shows that immune system response is substantially decreased among those who are vaccinated. This prevents vaccinated people from properly developing natural

immunity against covid. So they end up getting it multiple times

German Immune System Response - RKI Dec 30

Findings from the Pfizer Clinical Trials indicates that the immune system diminishes over time among the vaccinated

[UK Government Data](#)

Shows a decline in immune system performance across their population [1]

Covid is linked to increase in [Prion Diseases](#) like Dementia Alzheimer's

12 - Unexpected Ingredients

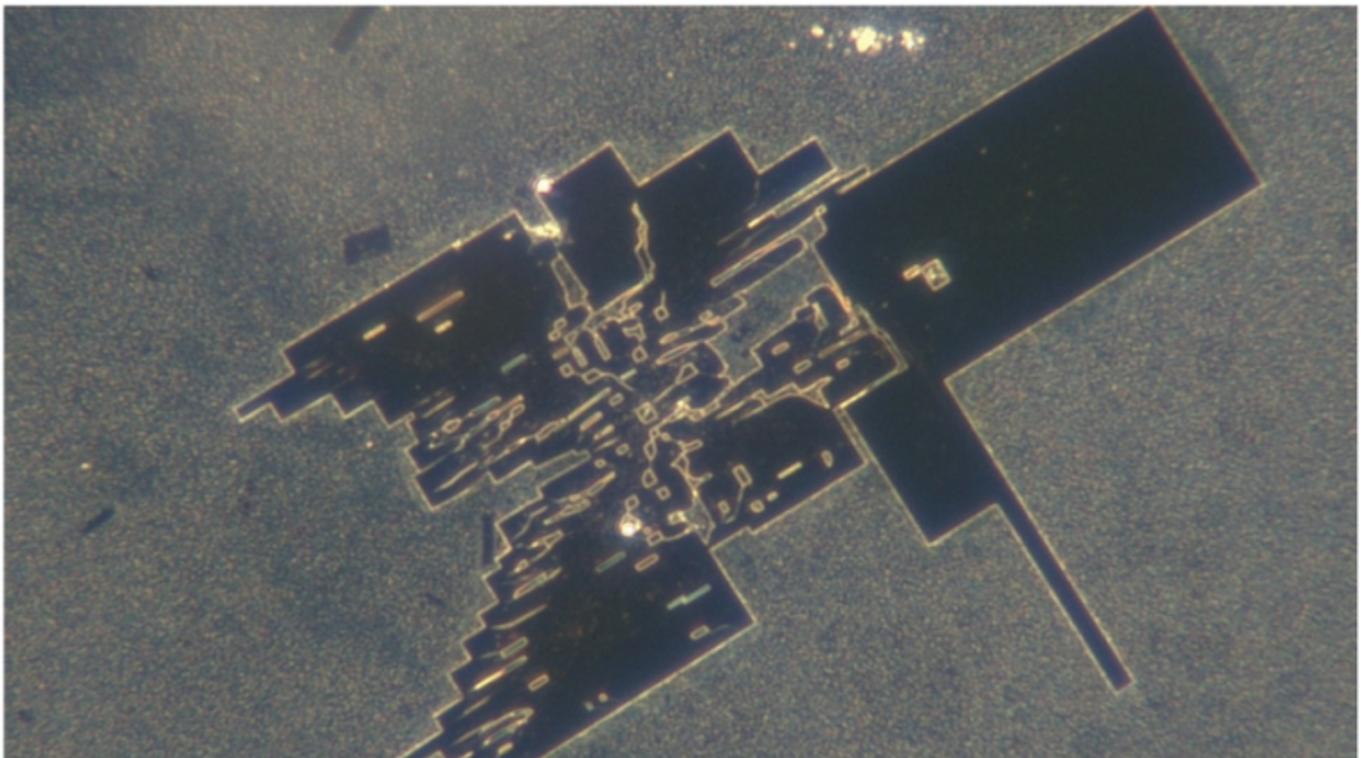

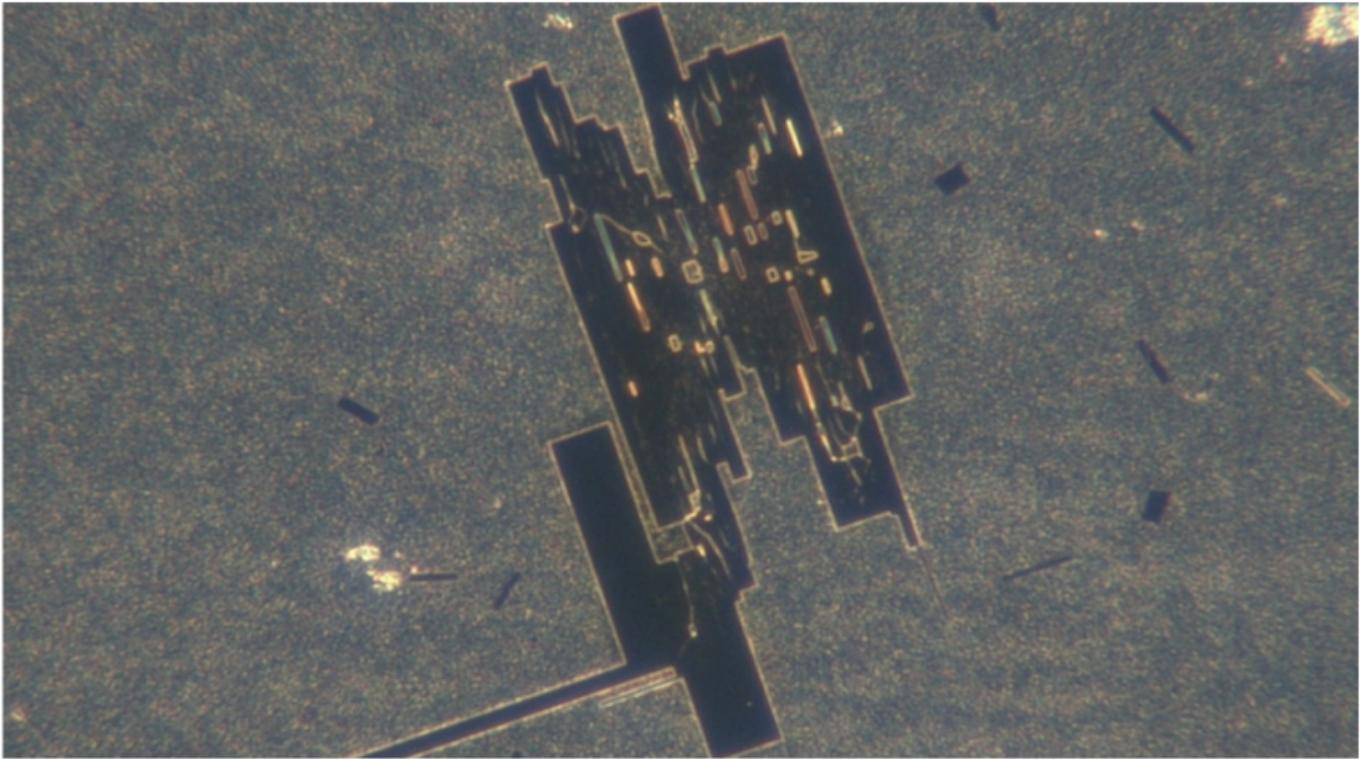

Weird things have been found in the vaccine.

[Argentina National Administration of Drugs, Foods and Medical Devices](#) released a statement that Graphene is a component of the vaccines.

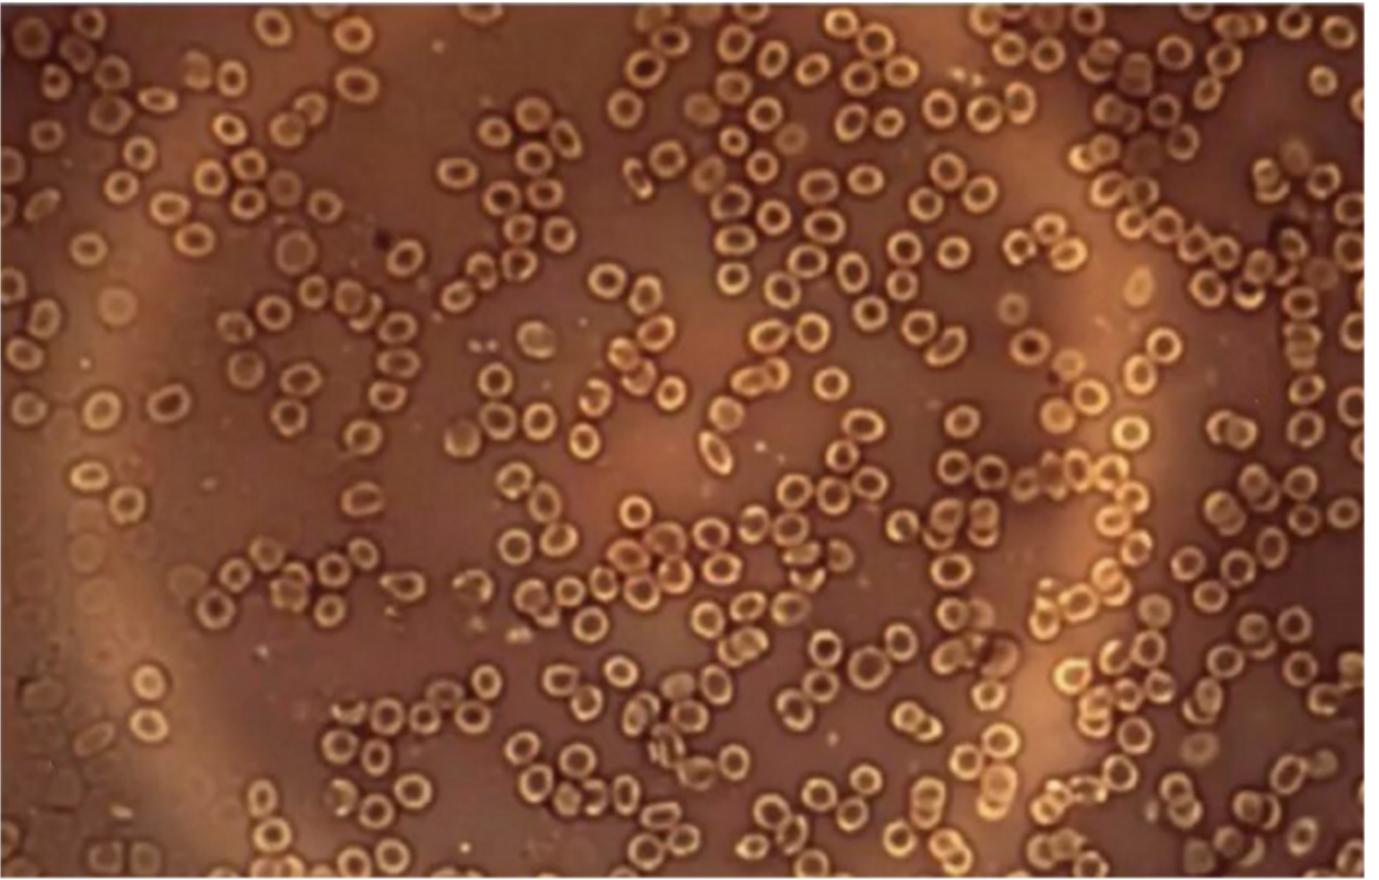

Dr. Robert Young, a microscopy expert holding two PhD's says he has examined the contents of the four publicly-available CoV-19 "vaccines", and determined the vials to contain graphene oxide, deadly parasites and stainless steel, among other metals and contents.[1]

[Some scientists from New Zealand](#), took these photos of the vaccine under a microscope:

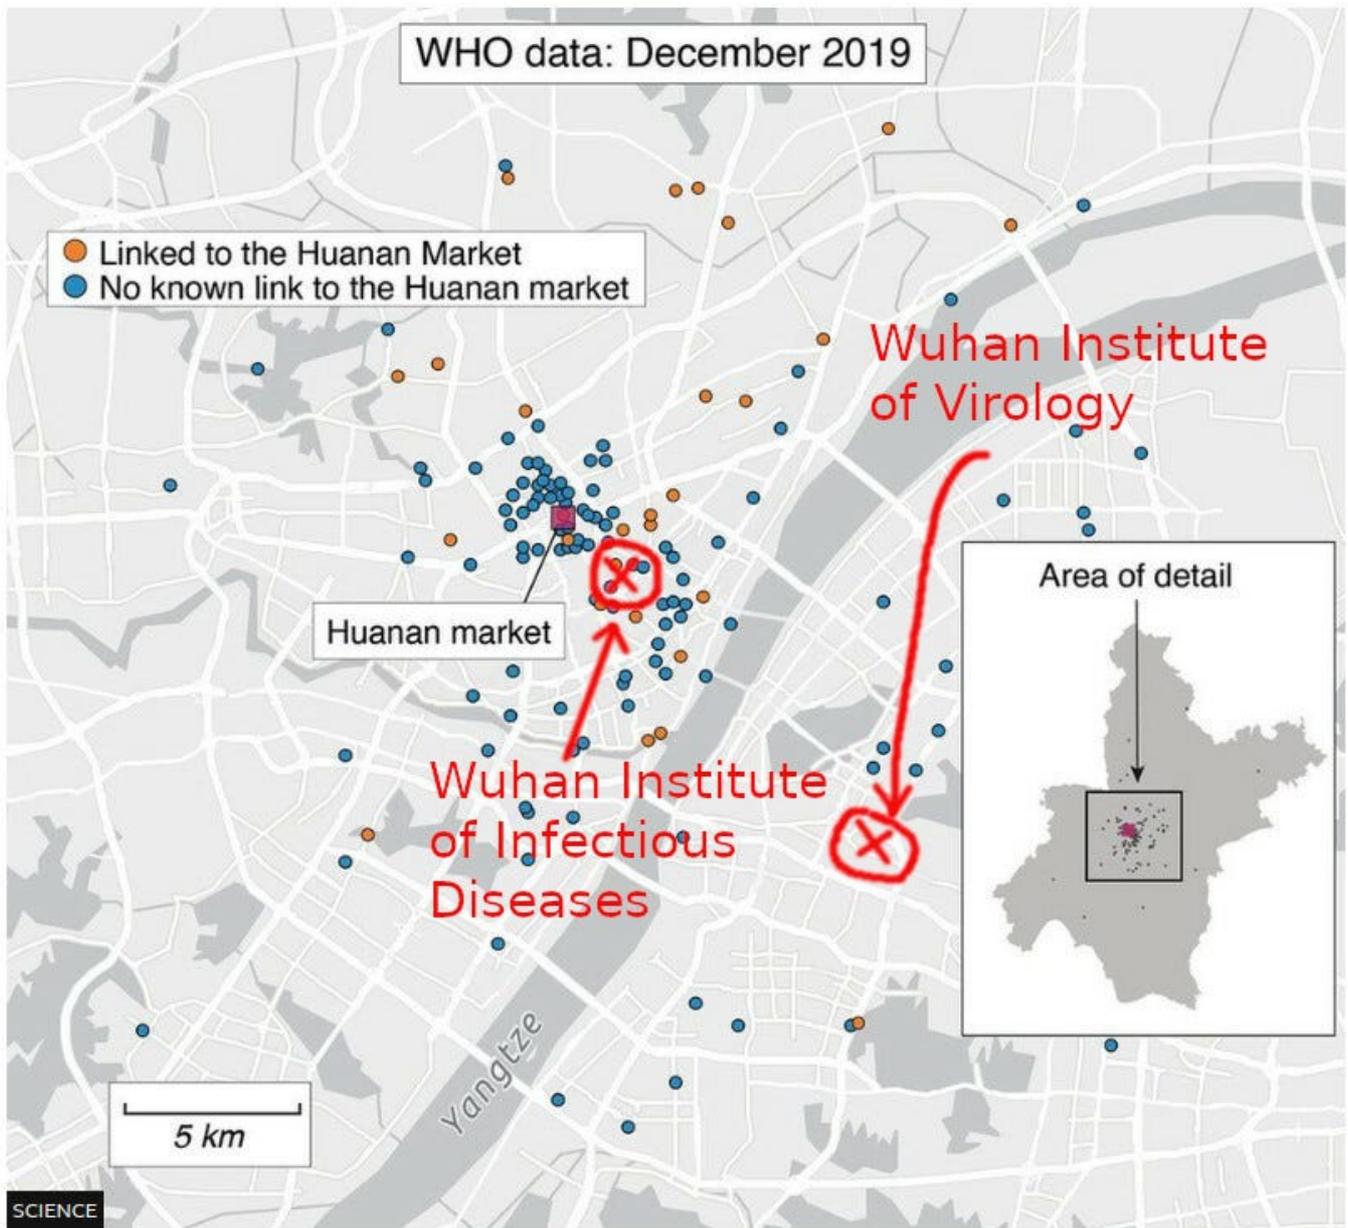

Scientists watched what happens to blood after being exposed to the vaccine, and found it appeared to cause it to stick together. Here are some pics with and without the vax.

13 - Origins: Covid & Spike Protein

Here's a map of the first cases of covid-19 in China

Early cases clustered around the Huanan market (c) Science

The spike protein is extremely similar in appearance and DNA [to the spike protein in HIV](#). The authors state this is unlikely to be a coincidence. Other publications have also pointed out the similarity [1] [2]

A german team published a paper [currently in the bioRxiv](#) that analyzes certain "fingerprints" of the virus and conclude that most of it (99.9%) was made in a lab [1][2]

[This report to congress](#) details the results of an investigation into the origin of Covid-19. The conclusion is it came from a lab in Wuhan, created by EcoHealthAlliance, with funding FROM NIH and NIAID under guidance of Anthony Fauci

A publication in [Frontiers of Virology](#) finds that DNA in covid-19 matches a USA patent. This guarantees it was created in some lab. The patent belongs to Moderna.

A document from DARPA to the inspector general appears to reveal that COVID was created by cooperation between US programs and Wuhan

1. SARS-CoV-2 is an American-created recombinant bat vaccine, or its precursor virus. It was created by an EcoHealth Alliance program at the Wuhan Institute of Virology (WIV), as suggested by the reporting surrounding the lab leak hypothesis. The details of this program have been concealed since the pandemic began. These details can be found in the EcoHealth Alliance proposal response to the DARPA¹ PREEMPT¹¹ program Broad Agency Announcement (BAA) HR00118S0017, dated March 2018¹¹¹ - a document not yet publicly disclosed.

The contents of the proposed program are extremely detailed. Peter Daszak lays out step-by-step what the organization intends to do by phase and by location. The primary scientists involved, their roles, and their institutions are indicated. The funding plan for the WIV work is its own document. The reasons why nonpharmaceutical interventions like masks and medical countermeasures like the mRNA vaccines do not work well can be extrapolated from the details. The reasons why the early treatment protocols work as curatives are apparent.

SARS-CoV-2's form as it emerged is likely as a precursor, deliberately virulent, humanized recombinant SARSr-CoV that was to be reverse engineered into a live attenuated SARSr-Cov bat vaccine. Its nature can be determined from analysis of its genome with the context provided by

the EcoHealth Alliance proposal. Joining this analysis with US intelligence collections on Wuhan will aid this determination.

Covid was created by the government through the CIAs gain of function research by the eco health alliance, then released on the population to test how vast they could vaccinate the entire population, and how much resistance the sheep would give. Turns out, it's a lot.

Moderna sent an mRNA vaccine to researchers week before there were any cases

 - North Korea [\[1\]](#)

- Not assassinated?

15 - Appendix

Trial Phases:

[FDA Website](#)

- Phase 1
 - Study Participants: 20 to 100 healthy volunteers or people with the disease/condition.
 - Length of Study: Several months
 - Purpose: Safety and dosage
- Phase 2
 - Study Participants: Up to several hundred people with the disease/condition.
 - Length of Study: Several months to 2 years
 - Purpose: Efficacy and side effects
- Phase 3
 - Study Participants: 300 to 3,000 volunteers who have the disease or condition
 - Length of Study: 1 to 4 years
 - Purpose: Efficacy and monitoring of adverse reactions
- Phase 4
 - Study Participants: Several thousand volunteers who have the disease/condition
 - Purpose: Safety and efficacy

Technical Notes

Lymphocytes - T cells and B cells - grow in bone marrow, and are stored in the spleen. T cells are limited for adults because they mature in the thymus, but the thymus disappears after puberty. People with HIV run out of T cells

Pfizer and Moderna use a kind of mRNA where the Uridine replaced by "Pseudouridine"

Mechanism for spike-protein induced blood clotting:

1. Complement-mediated inflammation of epitheliums ([endothelialitis](#)): Spike proteins docking on ACE2 ECs activates the complement pathway and coagulation cascade, resulting in a systemic endothelialitis (lung injury) and procoagulant state (tendency to develop blood clots). 2. As the complement destroys the endothelium, the procoagulant von Willebrand factor (vWF) and FVIII are released. [A significant increase of vWF can form multimers that promote thrombus growth](#). vWF is secreted mainly from

endothelial cells and from agranules of platelets (megakaryocytes derived). This is comparable to the string in the “beads and string” of a necklace where the beads represent platelets. 3. Platelet storm: Platelets are a small fragment of the megakaryocytes. The complement anaphylatoxins C3a and C5a activate platelets and increase the production of tissue factor further promoting a clotting forming state. ACE2 receptors are present on platelets, and this may contribute to the massive platelet aggregation, which is a characteristic of severe COVID-19 infection. 4. Activation of neutrophils leads to formation of neutrophil extracellular traps (NETs), a process sometimes referred to as [NETosis, which contributes to thrombosis](#). 5. EC injury is compounded by toll-like receptor (TLR) activation by viral RNA recognition, with resulting [increased reactive oxidative species \(ROS\) production](#). [The increased ROS further upregulates the expression of vWF](#). 6. Spike protein can induce expression and secretion of a [series of clotting proteins which cascades into the clotting process, including factor \(F\)-V, thrombin, and fibrinogen](#) to promote clotting process.
