## Module Responses

### HIBP

**Registered** : true

**Breach** : true

**Name** : MyHeritage

**Website** : myheritage.com

**Bio** : In October 2017, the genealogy website [MyHeritage](https://blog.myheritage.com/2018/06/myheritage-statement-about-a-cybersecurity-incident/) suffered a data breach. The incident was reported 7 months later after a security researcher discovered the data and contacted MyHeritage. In total, more than 92M customer records were exposed and included email addresses and salted SHA-1 password hashes. In 2019, [the data](https://www.theregister.co.uk/2019/02/11/620_million_hacked_accounts_dark_web/) appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by a source who requested it be attributed to [BenjaminBlue@exploit.im](#).

**Breach** : true

**Name** : Twitter (200M)

**Website** : twitter.com

**Bio** : In early 2023, [over 200M records](https://www.bleepingcomputer.com/news/security/200-million-twitter-users-email-addresses-allegedly-leaked-online/) scraped from Twitter appeared on a popular hacking forum. The data was obtained sometime in 2021 by abusing an API that enabled email addresses to be resolved to Twitter profiles. The subsequent results were then composed into a corpus of data containing email addresses alongside public Twitter profile information including names, usernames and follower counts.
