"Looking forward, rapid changes are taking place in the global monetary system that may affect the international role of the dollar in the future. Most major economies already have or are in the process of developing instant, 24/7 payments. \*\*Our own FedNow service will be coming online in 2023.\*\* And in light of the tremendous growth in crypto-assets and stablecoins, the Federal Reserve is examining whether a U.S. central bank digital currency (CBDC) would improve on an already safe and efficient domestic payments system. As the Fed's white paper on this topic notes, a U.S. CBDC could also potentially help maintain the dollar's international standing."
