Breach : true

Name : Adobe

Website : adobe.com

Bio : In October 2013, 153 million Adobe accounts were breached with each containing an internal ID, username, email, *encrypted* password and a password hint in plain text. The password cryptography was poorly done and many were quickly resolved back to plain text. The unencrypted hints also [disclosed much about the passwords](http://www.troyhunt.com/2013/11/adobe-credentials-and-serious.html) adding further to the risk that hundreds of millions of Adobe customers already faced.

Breach : true

Name : CashCrate

Website : cashcrate.com

Bio : In June 2017, news broke that [CashCrate had suffered a data breach exposing 6.8 million records](https://motherboard.vice.com/en_us/article/bj8pvq/hackers-steal-6-million-user-accounts-for-cash-for-surveys-site). The breach of the cash-for-surveys site dated back to November 2016 and exposed names, physical addresses, email addresses and passwords stored in plain text for older accounts along with weak MD5 hashes for newer ones.

Breach : true

Name : ClearVoice Surveys

Website : clearvoicesurveys.com

Bio : In April 2021, the market research surveys company ClearVoice Surveys had a publicly facing database backup from 2015 taken and redistributed on a popular hacking forum. The data included 15M unique email addresses across more than 17M rows of data that also included names, physical and IP addresses, genders, dates of birth and plain text passwords. ClearVoice Surveys advised they were aware of the breach and confirmed its authenticity.

Breach : true

Name : Explore Talent (August 2024)

Website : exploretalent.com

Bio : In August 2024, a slew of security vulnerabilities were identified with a conglomerate of online services which included the talent network Explore Talent. A vulnerable API exposed the personal records of 11.4M users of the service of which 8.9M unique email addresses were provided to HIBP. This incident is separate to the Explore Talent breach which occurred in 2022 and was loaded into HIBP in July 2024.

Breach : true

Name : MyHeritage

Website : myheritage.com

Bio : In October 2017, the genealogy website [MyHeritage](https://blog.myheritage.com/2018/06/myheritage-statement-about-a-cybersecurity-incident/) suffered a data breach. The incident was reported 7 months later after a security researcher discovered the data and contacted MyHeritage. In total, more than 92M customer records were exposed and included email addresses and salted SHA-1 password hashes. In 2019, [the data](https://www.theregister.co.uk/2019/02/11/620_million_hacked_accounts_dark_web/) appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by a source who requested it be attributed to "BenjaminBlue@exploit.im";

Breach : true

Name : River City Media Spam List

Website : rivercitymediaonline.com

Bio : In January 2017, [a massive trove of data from River City Media](https://web.archive.org/web/20170426084052/https://mackeeper.com/blog/post/339-spammergate-the-fall-of-an-empire) was found exposed online. The data was found to contain almost 1.4 billion records including email and IP addresses, names and physical addresses, all of which was used as part of an enormous spam operation. Once de-duplicated, there were 393 million unique email addresses within the exposed data.

Breach : true

Name : Twitter (200M)

Website : twitter.com

Bio : In early 2023, [over 200M records](https://www.bleepingcomputer.com/news/security/200-million-twitter-users-email-addresses-allegedly-leaked-online/) scraped from Twitter appeared on a popular hacking forum. The data was obtained sometime in 2021 by abusing an API that enabled email addresses to be resolved to Twitter profiles. The subsequent results were

then composed into a corpus of data containing email addresses alongside public Twitter profile information including names, usernames and follower counts.

Breach : true

Name : Verifications.io

Website : verifications.io

Bio : In February 2019, the email address validation service [verifications.io](https://securitydiscovery.com/800-million-emails-leaked-online-by-email-verification-service) suffered a data breach. Discovered by [Bob Diachenko](https://twitter.com/mayhemdayone) and [Vinny Troia](https://twitter.com/vinnytroia), the breach was due to the data being stored in a MongoDB instance left publicly facing without a password and resulted in 763 million unique email addresses being exposed. Many records within the data also included additional personal attributes such as names, phone numbers, IP addresses, dates of birth and genders. No passwords were included in the data. The Verifications.io website went offline during the disclosure process, although [an archived copy remains viewable](https://web.archive.org/web/20190227230352/https://verifications.io/).

Breach : true

Name : Whitepages

Website : whitepages.com

Bio : In mid-2016, the telephone and address directory service Whitepages was among a raft of sites that were breached and their data then sold in early-2019. The data included over 11 million unique email addresses alongside names and passwords stored as either a SHA-1 or bcrypt hash. The data was provided to HIBP by a source who requested it to be attributed to "BenjaminBlue@exploit.im".
