

THONHART's

ESTATES & HOUSING

Thank you for your Premade JSON design purchase

Please read the following information carefully

1. **This is a JSON file intended for ReMakeplace Only**

This digital purchase only includes JSON file intended to be used with the ReMakeplace app, alongside the text file with the furniture list and dyeing guide. No in-game service, data, or item is provided.

For the fixtures, lighting settings, and additional set-up details, please check the product page under the Specification section.

You are only buying a JSON intended to be used with the ReMakeplace app. As such, please be reminded that:

- We cannot provide any service in-game (i.e., we do not set up the house, nor provide any guide or support for you to set up the house in-game).
- We do not encourage or provide any support for using any plugins. While it is uncommon, any actions taken on your FFXIV account are your sole responsibility should you choose to use any add-on in-game.
- We do not provide any support or troubleshooting for ReMakeplace. If you need help, please head over to [ReMakeplace Discord](#)

2. Using Remakeplace add-on

Please note that We do not encourage or provide any support for using any plugins. While it is uncommon, any actions taken on your FFXIV account are your sole responsibility should you choose to use any add-on in-game. Please also refrain from mentioning this in in-game chat.

Here's an overall step to set-up the house in game.

1. Check your furniture list & dyeing guide

Open the .txt file included with your purchase. The list will contain 3 sections:

- **Furniture**, which list all the furniture you need to get for this design.
- **Dyes**, which list the total amount of each dye you need.
- **Furniture (with dyes)**, which gives you the dyeing guide on which furniture you need to dye. For instances, if it says Stage Panel (Soot Black): 6, you need to dye 6 Stage Panel into Soot Black colour.

Useful online resources

If you use Teamcraft to craft furniture:

<https://github.com/DeafBun/Makeplace-To-Teamcraft>

You can use this tool to import JSON and generate all furniture, fixture, and items used in this design into Teamcraft for you.

Alternatively, if you are marketboard shopping:

<https://trainerhol.github.io/FFXIV-Market-Shopper/>

You can upload the JSON file to auto generate the shopping list in each world in your DC to get a cheapest furniture used in this design.

2. Check all remaining fixtures from the product page, under the 'Specification section'.

In the product page of the design you have bought, we will list other fixtures and items that wasn't included in the .txt file (e.g. house wallpapers, flooring, fixtures, and interactive items). You will also need to get these items to complete your set-up.

3. Change your interior design into the correct type first, before you place any furniture in the basement of the house.

You can change the interior design by:

While you are standing outside the house (in the front lawn),

type `/housing`` in the chatbox (or go to Social Menu → Housing)

→ Click the Interior Design option

→ And choose the style in the Specification tab of our product page (e.g. Minimalist)

4. Place all furniture in the basement

Once you have set the Housing Interior Design to the correct one, enter the house, go down to basement, and start dropping all furniture anywhere in the basement.

We recommend that you place each type of furniture separately and don't overlap different furniture type on each other (e.g. don't put small tabletop items on a rug), as it may glitch Remakeplace. Place partitions and wall item, rugs, tabletop item, and wall mounted item separately from each other).

Once all furniture is placed in the basement, make sure that all are dyed correctly

5. Open remakeplace by typing `/rmp`` in the chatbox

6. Load the .json file into Remakeplace by clicking 'Open File'

7. Enter housing mode, **change the Layout mode to 'Rotate'** and click 'Apply'

Please note:

- Try to set the Placement interval to around 500ms+ if the game crashes (depending on your ping).
- And make sure that your mouse cursor is not hovering over any item when it's setting up the house, (I recommend walking to the top floor corner and let it run). Don't move your cursor until it finishes.
- After it finishes, I recommend re-running it for a couple more times, in case any furniture doesn't get set up properly.

If you need to download Remakeplace, or have any further issue, please join the RemakePlace Discord and check out their '#troubleshooting' channel directly.

ReMakeplace Discord server: <https://discord.com/invite/f2VAqXKWUw>

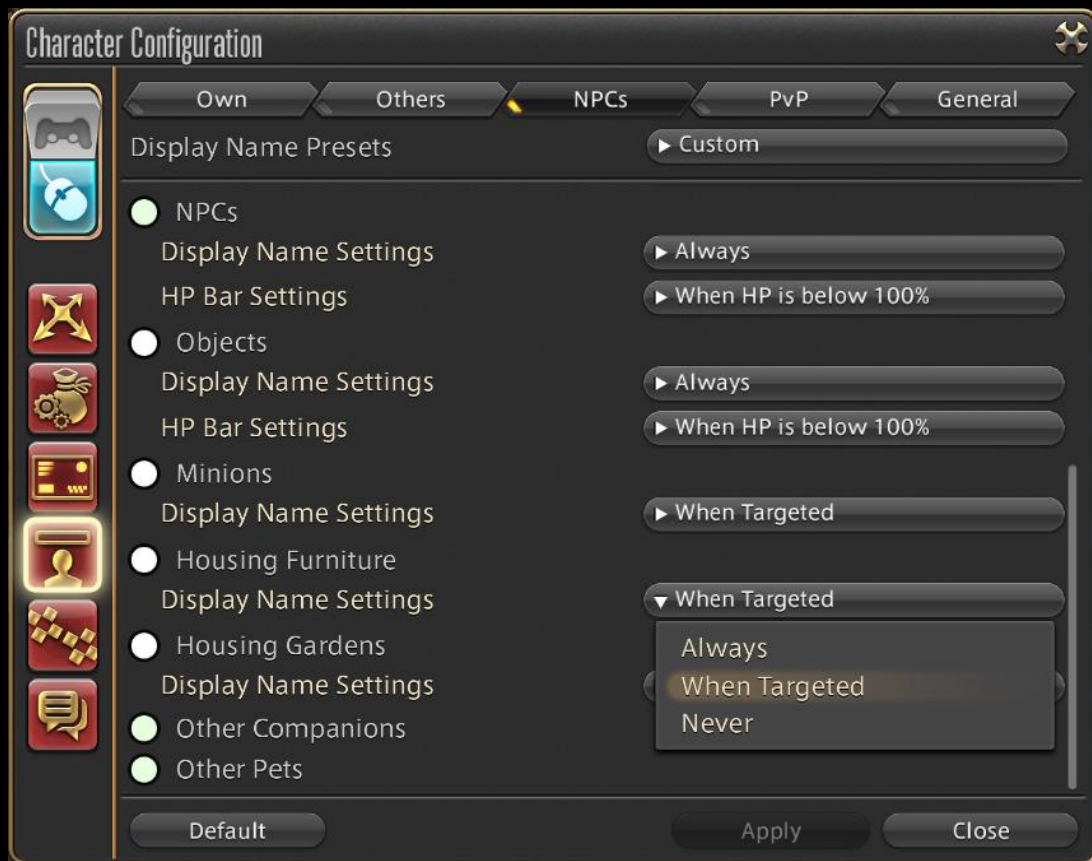

3. **Tips: Unwanted arrows on furniture?**

If you see an arrow on any customisable furniture or food items, you can hide them (the game defaults to always showing these, which can be a distractions).

Just go to

Character Configuration > Display Name Settings (4th icon on the left tab) > NPCs tab > Housing Furniture Display Name Settings > change to 'When Targeted'.

4. **Permitted use of our premade designs**

You are allowed to:

- You are permitted to use the JSON file and take inspiration from the commissioned house as you see fit.
- You may redesign or readjust any part of the house after the project is finalised. Please note that we cannot be held responsible and cannot provide any readjustment if any furniture or item glitching/clipping breaks due to your actions.
- You are permitted to create or make a copy of the house design (into JSON file or any comparable format), only for personal use. Sharing of such files with any other person is not permitted.

You are not permitted to:

- You are not permitted to create, make a copy, and/or duplicate our commissioned design for non-personal purposes, including but not limited to, sharing the house design with other people through any medium, selling our design, or using our design to commission another project.
- You are not permitted to create, make a copy of, and/or share any copy of the house design (in JSON file or any comparable format) into any platform or medium, online or otherwise, with other people for any reason.
- Taking inspiration from our project, or an attempt to recreate a design that is inspired from our project is completely fine, but any attempt to plagiarise or duplicate our design (e.g., a 1:1 recreation) for non-personal reasons is not permitted.

5. **If you have any issues with the premade purchase, let us know**

While we cannot provide you any support regarding ReMakeplace app/add-on itself, if there is an issue with the file or if you can't access the purchased item, please let us know in Thonhart's Discord server.

If you need help setting up or troubleshooting ReMakeplace, please head over to ReMakeplace Discord.

Please note that all payments are non-refundable, thank you for your customs.

We hope you enjoy your new premade house as much as we do.
