PAGE 2 - 2ND LAST PARAGRAPH:

"But there is a fourth function of money: as a means of social control. The centralized monopoly over the functions of money held by sovereign governments and central banks has generated great income and wealth imbalances. Concerns about a lack of central bank performance with respect to financial inclusion, income inequality, economic system stability and the tendency of central banks to intermeddle on behalf of large financial institutions supported the creation of cryptocurrency"

As we noted in a second paper "Is FedCoin Feasible?" another confidential, not-for-distribution research paper sent to select members of the House Financial Services Committee, we suggest the Board focus on using an enhanced Bitcoin blockchain to "support depository institutions' provision of end-to-end faster payment services and would provide infrastructure to promote ubiquitous, safe, and efficient faster payments in the United States."

The Fed is sending "confidential, not-for-distribution research" to select members of the House Financial Services Committee espousing money as a means of social control.

Speaking at the IMF-World Bank annual meeting on Oct. 15, Deputy Managing Director Bo Li said that a CBDC could improve "financial inclusion" through programmability.

Questions start for Bo Li 17:42

Bo Li starts speaking at 18:15

19:50 "A CBDC can allow government agencies and private sector players to program, to create smart contracts, to allow targeted policy functions," Li explained.

20:18 "For example, welfare payments, for example, consumption coupons, for example, food stamps."

D: --> 20:27 "By programming CBDC, that money can be precisely targeted for what kind of people can own [CBDC] and for what kind of use this money can be utilized, for example for food."

TRANSCRIPT

11:43 Digital Euro CBDC will be decided October 2023

12:58 Fake Z: "I know there are many protests in Europe against the electronic Euro, what is the reason?"

CL: "You know it's the beauty of Europe, it has different positions. If you ask in Northern Europe for instance, in the Netherlands, they're quite happy to see the E-Euro coming. If you ask a young German man they say 'yeah that's fine'. I don't want Meta, Google, or Amazon to suddenly come up with a currency to take over the sovereignty of Europe. I don't want a foreign currency to become the trading currency of Europe. So we have to be ready."

Fake Z: "The problem is they don't want to be controlled.

CL: "Yeah but you know what, now we have in Europe this threshold above 1000 Euros you can't pay in cash. If you do you're on the grey market, you take a risk. If you get caught, you are fined or you go in jail but the digital Euro will have unlimited amount of control. There will be control you are right. You are completely right. We are considering for very small amounts, anything around 300-400 Euros we could have a mechanism where we have zero control, but that could be dangerous. The terrorist attacks on France back 10 years ago were entirely financed by those small anonymous credit cards that you can recharge in total anonymity."

Fake Z: "You know the question is now I think it is a joke that the next currency will be firewoods for Europe... to heat the..."

CL: Yeah yeah yeah
