

A brief overview of this app.

1:

When you open the app for the first time you should go to the menu item Default Settings and select a custom font and font color to make your reading easier.

The app comes with hundreds of jokes to start with and you have the capability to add as many as you like.

2:

From the menu item “List Jokes by Groups (by Category and Rating)”

You can sort, search and view all your jokes listed by category and rating.

4:

There is now a print button on each of the group by screens which

will allow you to print the jokes you have filtered using the search bar.

5:

The Category and Rating are now a reference list item which means you can add to or delete them by accessing the “**Reference Lists**” menu Item.

6:

Using the Import/Export menu item requires a detailed step by step explanation:

Step 1: Click on the export tab located on the bottom right hand side.

Step 2: Click on the “Export Button” and wait for the “Data Export” prompt and click ok.

Step 3: You have the option of saving to files or emailing the file.

Step 4: If you choose Save to Files option then save it to a directory that you can access with your other device, i use iCloud document directory.

Step 5: Or you can Click on the “Email Button” and email the attached export file to a email address that you have access to from all your apple devices, the file might

be too large to send by regular email in which case a prompt will appear asking you to “Use Mail Drop” or “Try sending Attachment”; I prefer the Mail Drop option.

If you file was large you will have to wait a few minutes for it to arrive in you email inbox.

Step 6: Open your email program and find the email you just sent yourself; click on the export file attachment and wait for the file to download, when its downloaded

click

on the attachment again to open the file;
when the file is loaded click on the action button on the top
right hand side and select “Save to Files”.

I chose to the document directory on iCloud,
you can create and name one of your choice, you may
have to create the directory before you

can click on the “Save too Files”.

Step 5: From your apple device that you want to
import the joke collection export file into; Start the My Joke
Collection app and Click on the Import/Export menu Item
and make sure you’re on the Import tab.

Step 6: Click on the “Load File” button and and locate
the file you just saved and click on it and you will see the
file loaded, click ok the “Data Import” file Loaded and
Ready to Import prompt.

Step 7: Click on the “Import Button” and wait for the
“Data Import” data Import Completed prompt and click ok;
and you’re all done.

Step 8: This step is hardly ever used: If you had a
problem and the file didn’t import then send me an email
from the “Rate / Share / Contact” menu item with a brief
explanation of what happened and we
will attempt to figure it out.
