

(The title above the first column, printed on the form):

Number and title of the work. Who ordered it. Source of financing. Estimated expense of the the work. Organization (office) which is entitled to know about the temporary and final results of the work.

(Under the number 1, written by typewriter):

"Horisont-MO"

Complex research of anomalous aerocosmic (or: aerial and cosmic) phenomena ^{on} of technogenic kind and working-out of recommendations taking into consideration (the) consequences of the manifestations of their effects in military practice.

Order^d by (the) Ministry of Defense (# 25580)

Source of financing - budget of the executives (of the order?)
(means: people who do the research)

(Title above column # 2):

Contents of the work (main demands ^{or}/features of the task), expected results of the investigations and forms of its realization (task to put the results of the work into practice)

(Written by typewriter below the number 2):

Needed

- collection and systematization of data ^{orion} about anomalous atmospheric and cosmic phenomena and their effects on workings of technical apparatus,
- development of investigation(s) of the mechanism how anomalous atmospheric and cosmic phenomena of technogenic character (kind) appear and of characteristics of the manifestations of the observed effects,

- research on correlations of the observed phenomena with meteorologic conditions and geophysical activity,
- research of possible working mechanisms of the anomalous atmospheric and cosmic phenomena on technical apparatus,
- evaluation of possible directions how to use and calculate observed effects in practice,
- to be worked out recommendations concerning consequences of manifestations of the effects of anomalous phenomena in military practice.

(Title above the third column):

Main executives, co-executives ^(of the order) and their departments (numbers of the orders on which they work). Organizations (institutions), where the results of the work are planned to be put into practice.

(Typewritten below # 3):

- Military units 67947 ... etc.
- Military (or Army) institute of engineering of Red Flag VVAIU in Irkutsk (what the abbreviation means, I don't know)
- Film studio (or cinema studio) of Ministry of Defense
- Institute of atmospheric physics
- Institute of earth magnetism, ionosphere and radiowaves
- Institute of radio technology and electronics of the Academy of Sciences of USSR
- Institute of geology and geophysics of the Academy of Sciences of USSR
- Institute of engineering and physics (in Moscow) of USSR
- Institute of scientific research of radiophysics (in Moscow) of RSFSR

(Title above column # 4):

Schedule of execution of order and its phases. Schedule of getting results from the research.

Years 1986-1990
1st phase 1986-1987
2nd phase 1988-1990

PAGE 285

The titles of the columns (above the column numbers) are the same as on the page # 284

Column 1:

"Horison^TAN"

REsearch of the physical nature and mechanisms of development of anomalous atmospheric and cosmic phenomena.
Ordered by the Institute of earth (or perhaps: planetary) magnetism, ionosphere and radiowaves of the Academy of Sciences of the USSR
Source of financing - budget of the executives (of the order)

Column 2:

Needed

- collection and analysis of the data on observations of anomalous phenomena;
- execution of goal-oriented instrumental research of certain classes of phenomena;
- working-out of a physical model of development of separate types of phenomena;
- working-out of proposals how to put the results from the research into practice and their further development

Column 3:

Institute of earth (or planetary) magnetism, ionosphere and radiowaves;

*Institute of ~~Physics~~ *Physical Sciences*
Institute of Physics and Technology;

**Astronomical Council of the Academy of Sciences of USSR
Military unit 67947, Ministry of Defense

1. INTRODUCTION

Since 1980 on the initiative of the Ministry of Defence in some military units and offices with the participance of the Scientific Rearch Heading Department of the Ministry of Defence, Ministeries of the Defence branches of industry and the Academy of Science, purposeful researches aimed at the collection, analysis, identification of the abnomal atmosphere and space phenomena data (AAP) have been conducted.

The results of these researches which have been obtained by now, show that the number of the observed in the last 10-15 years abnomal aerospace phenomena has increased greatly, which can be explained by the increase of the number of the tests of rockets and other space technique, a wider use of the methods of the active influence on the atmosphere and near Earth space in order to solve some applied problems (injection of pencils of electrons, the influences of electro-magnetic fields and etc.) and the increase of the number of cases of anthropous influences connected with industrial activity.

Parallel with this the number of not identified AAP has increased, these AAP are bound with

the cases of the influences on technical equipment of the military objects and technique (radioelectronic, optical-electronic, electro-technical means, elements of energy-power installations), on sensitiveness of people, which can lead to the not adequate estimation of the situation by the operators of radiolocating stations, by the controllers of airplane movements, by crews of aircrafts and naval depots and other military specialists.

All the above mentioned information causes the necessaty to conduct a wide circle of researches coordinated within the framework of one complex scientific-research programme and directed at the investigation of the nature of AAP, finding the ways and means of defence from undesirable influence of radiation connected with AAP and the possibility to use the separate features for military purposes.

At the meeting which was conducted by The General Organizer (military unity 10003) on the 24 th of May 1990 with the participation of m/u 67947, 73790 and others (Minutes N 35/0969 m /u 67947 15.06.1990) it was recognized expedient to concentrate all the investigations in this sphere on the solution of the following questions:

1. The observation, registration, identification, generalization and classification of AAP and their influence on technical equipment and personnel.

2. The research of physical principles of the origin and development of AAP (including physical principles of their travel in space), working out of the methods of prognoses of their dynamics, the determination of phenomena features by finding out their forestallings and causes of their appearance.

3. The research of the principles of AAP influence on personnel and the instruments of military technical equipment and working out the methods of the estimation of the after-effects and protection against them, and also the investigation of the possible ways of the application of AAP individual features for military purposes.

The analysis of the condition of the above-mentioned investigations has turned out that:

The existing system of the collection and treatment of

information which is used for the solution of problems of p. 1 requires subsequent improvement with due regard to the latest achievements in the sphere of automatized collecting of all available information on AAP not only in the Ministry of Defence but in other organizations dealing with the same problems.

2

Two approaches to the investigation of problems of pp 2 and 3 have been worked out. The first one is connected with the observations of sporadical AAP and aimed at the research of the origin and prognoses of the development of AAP taking into consideration the condition of helio-geographical activity. The approach also includes the investigation of abnormal atmosphere optical effects caused by the launchings and flights of RC 1 objects and use of weapons in outer space. The improvement of the methods of such investigations can be attained by carrying out instrumental spectrophotometrical researches of the abnormal perturbations of the upper atmosphere, which appear as a result of rocket and space probe tests. The continuation of researches in these directions can permit to reduce the number of "inexplicable" not-identified AAP.

The second approach deals with the development of new directions of researches, based on the theoretical-experimental analysis of various versions of AAP under laboratory conditions with the help of the methods of mathematical and physical modeling.

Such researches can result in the discovery of new physical laws and fundamentally new ways of the trasference of material objects.

Until now the works in the enumerated new directions of the investigations of AAP haven't started yet from the initiative stage. They need coordinative help from the Ministry of Defence for future development.

The researches devoted to the scintific- research theme "Thread-3" connected with the above-mentioned problems, and the results of the first stage of it's fulfilment are presented in this report.

2.

The formulation of the scientifically-grounded conception of the research of non-traditional propelling agents' functioning and conteraction with environment.

2.1. The analysis of the researches dealing with the theme, the results of patent-informational search and estimation of the level of the scientific-research works, conducted in the USSR and abroad.

2.1.1. Soviet investigations of UFO problems, abnormal aerospace phenomena and non-traditional propelling agents.

The UFO problems in the USSR have been working out from the end of the 40th -the beginning of the 50th by enthusiasts. These investigations were conducted mainly illegally, on one's own responsibility, as the attitude of the official circles towards the problem was distinctly negative. So, in December of 1953 the Moscow Radio touched upon the subject in it's broadcast, it was declared that american imperialists had invented a stupid tale for stirring up a war, for intimidating of taxpayers and the Congress in order to confirm an excessively high budget" (34, p. 25).

Firstly the investigations were limited to the collection of facts and commanding the attention of the scientific-research institutes and government circles to the problem. Some UFOlogists (Fomin Y.A. for example) more than once delivered lectures before various special audiences. The results of these works were never published in the public press, we know about them by reminiscences of the UFOlogists and by critical articles in the press (for example in "Pravda" and "Komsomolskaya Pravda" of the 8th of January 1961). Besides that some articles devoted to the problem

of palaeovisits (coming to our planets in heavy antiquity interplanetary space-ships with visitors from other planets) were published.

It must be noted, the idea of palaeovisits appeared considerably earlier than the first information about UFO, particularly in the works of theosophists (34,37) and also in science-fiction books (A. I. Efremov, A. P. Kazantzev). In the Soviet Union science-fiction literature dealing with the problem of palaeovisits appeared at the beginning of the 60th (noticeably earlier than in the West) (14). The research of the problem of palaeovisits has been continued until now in this country, among the most important works are the works of I. S. Lisevich, V. Avinsky, V. Nikitin (2, 15).

In the middle of the 60th an attempt was made to found the Section of UFO problems at the Moscow House of aviation and space exploration (chairman - general-major of aviation Stolyarov P. A. ^L, vice-chairman - science-fiction writer A. P. Kazantzev) But as the internal political situation had changed for the worse and the criticism against UFO problems became sharp, the attempt was a failure.

By this time in the USSR several groups of enthusiasts dealing with the UFO problems had appeared. The most active investigations were conducted by the group of an assistant professor, candidate of physical-mathematical science Zigel F. Y. and a candidate of technical science Azhazha V. G. Most of their work was aimed at the propaganda of the importance of UFO problems, the problems of palaeovisits and at the collection of the information about UFO in the USSR and abroad. The important part was paid to the popularization of the works of American and French UFOlogists. These works were not translated and published in the USSR and it was difficult to find them. Up to the 70th the propaganda of the foreign experience was their main activity.

The investigations of the abnormal phenomena problems had an additional impulse after the first facts of UFO landings in the USSR. They began to pay much more attention to the researches of the phenomenon influence on environment and nature. The landing places were investigated with biolocation frames and other instruments. Cytological and biological methods were used in researches. The first works dealing with statistic analysis of UFO appeared in the USSR.

The observation of the abnormal phenomenon in Petrozavodsk ("Petrozavodsk phenomenon" 20.09.1977) gave a new impulse for UFO researches and stimulated the establishment of physical-chemical and energetic models of the interaction of the phenomenon with environment (38). Considerable scientific forces joined the works (for example the group of Troizki V. S., an Associate Member of the Academy of Science of the USSR). Several manuscripts dealing with the problem and containing great factual material were out (16, 17, 20). In 1983 the section approached to the club "Inversor" of the magazine "Youth Technique" started its work (the leader of the section - Kuzovkin A. S.). At the meetings of this section many interesting lectures devoted to the UFO problems were delivered. In 1984 at the All-Union Soviet of the scientific-technical Societies (now Soviet of scientific and engineering societies) the Committee of researches of abnormal phenomena under the leadership of an Associate Member of the Academy of Science V. S. Troizki was organized. Until now this Committee has organized and held not less than 10 conferences and plenary meetings connected with AAP problems.

After the abolition of the censorship according to the UFO problems, the number of articles connected with the problem increased greatly in the USSR. But in contrast to serious investigations of the problem, the sensational articles containing many doubtful facts, were published also. The number of groups dealing with the problem increased also. For example, the Section of AAP investigations was founded at the All

Union Astronomical-geographical Society (Chairman Lisitsakov A.P.)
The main directions of these groups' work were concentrated on the following aspects of the problem:

- the collection and analysis of the information of near contacts with UFO and pilots-humanoids of "flying plates" (UFO-nauts)
- the general analysis of UFO phenomenon
- the research of the peculiarities of UFO interaction with environment, technical objects and people;
- the research of palaeovisits.

Nowdays there are more than 20 groups in the USSR dealing with the problems of AAP. The most large of them are in Moscow, Gorky, Kiev, Leningrad, Novosibirsk and Tomsk. In 1990 All Union UFOlogist Association /Union UFO centre/ was organized with V.G. Azhazha as it's chairman. The task of the organization was to formulate a scientific approach to the problems of UFO.

It must be noted that groups which were found long ago, inspite of their activity in the press, are mainly engaged in interpreting of foreign materials, introducing in them nothing new. Parallel with this, many investigators dealing with the working out of the problem of UFO interactions with environment, have suggested some interesting hypotheses having no straight analogies in foreign literature. In this connection the idea of the complex approach to the problem of AAP and the attempts to link it with bioenergetic features of a man (31,37) or researches of the possible solution of the problem of levitation of material objects with the characteristics attributed to UFO is worth attention. Nevertheless, the factual material available in literature doesn't permit to judge with confidence if the above-mentioned hypotheses are worth futher deep working out. The search of answers to these and other questions was involved in the number of tasks considering within the framework of the programme "Thread-3" in 1991.

In contrast to the Soviet UFOlogists-enthusiasts, setting about the research of the AAP problems at the end of the 40th, the representatives of the so-called official science started the similar investigations only 30 years later.

The purposeful scientific researches of the abnomal aerospace phenomena were started in the Soviet Union in 1979 with the beginning of the work of the programme "Network-AN". Later such investigations were continued within the programme "Galaxy-MD" (1981-85 according to the decision of the State Committee of the Soviet of Ministers of the USSR of military-industrial problems. 22.08.1980 N 255). In the course of the fulfilment of these themes the methodology of the identification of abnomal phenomena with the conducting of rocket technique tests and other scientific technical experiments, including experiments exerting active influence on the upper atmosphere of the Earth, were worked out and approbated. (38) The obtained results showed the intercommunication of abnomal aerospace phenomena with the condition of the heliogeophysical activity and interplanet magnetic field (1,3).

In order to develop the works on the problem aiming at the further research of the nature of the possible mechanisms of the origin and development of abnomal aerospace phenomenon and peculiarities of their appearance and the ways of the possible application of the attendant effects for practice, the programme "Horizon-MD" which was started according to the decision of the Committee of the Presidium of the Soviet of Ministers of the USSR of military-industrial questions on 5.10.85 with the participance of the military unit 67947, was fulfilled during the period 1986-88.

During this work, they obtained the results which confirmed the role of technical factors in the origin and development of abnomal aerospace phenomena, some possible mechanisms of abnomal

phenomena influence on the technical means were considered. It was issued special information materials for interested organizations of the Ministry of Defence. The issues contained some recommendations about after-effects and the application of attendant effects for military practice. (38)

5

By the decision of the State Committee of the Soviet of Ministers of the USSR for military-industrial questions, 4.07.1988 N 254 the works on the problem were continued within the programme "Pluton-7" from 1989 to 1990. As a result of it the method of experimental estimation of the spectral characteristics of the atmosphere luminiscence associated with the launchings of the space technique objects in the training ground conditions has been worked out.

Reviewing the investigations of AAP, conducting on the professional level, during more than ten year period, it must be stressed, that they permitted to get the first results in the following three directions:

1. The organization of the collection of trustworthy information dealing with observed abnormal phenomena, it's systematization and identification.

2. The research of the abnormal phenomena interconditionality with the Sun activity, neophysical processes and conducting of scientific-technical experiments in the atmosphere and space.

3. The working out of the methodology of identification of abnormal phenomena to the known physical phenomena.

So one of the results of "Network-AS" was "The methodological instructions on the organization of the observations of abnormal atmosphere and space phenomena and their influence on environment, living beings and technical means" which were worked out and put into action in the Military Forces of the USSR in 1990. (38). It was also worked out a special form for the registration of all necessary features of abnormal phenomenon to ensure it's full representation.

Due to the analysis and the research of all the obtained information, it has been founded out that the great number of phenomena, regarded as unknown and abnormal, are closely connected with the conducting of active scientific-technical experiments and tests of technique, including rocket and space-probe launchings. (38)

In connection with this, at present the problem of abnormal aerospace phenomena attracts the attention of the scientists dealing with the consequences of technical influence on environment - they are specialists in aeronomy, global ecology, and geophysics. It is ascertained that with the beginning of the space era and the first rocket launching the upper atmosphere of the Earth is engaged in the process of very intensive transformations. The technical influences on it became more various and global. It's not only the number of rocket launchings (from geophysical probes to the large systems of shuttle type) that has increased but also the number of research powerful influences on the upper atmosphere.

As a result of various types of technical activity the space near the Earth-atmosphere, ionosphere, magnetical fields are polluted by alien components of technical origin. This activity has already planetary consequences as the decrease of the content of ozone (38), global rise in temperature (38), seven days pulsating of the geomagnetical field (38). The dispersion of various substances in the upper atmosphere influences the luminiscence of the upper atmosphere. At present some estimations of the results of the injections of various substances in the upper atmosphere at rocket launching have been made.

Parallel with this there are observed some cases of abnormal phenomena which haven't got necessary scientific explanation. We can attribute to them abnormaloptical geophysical phenomena observed in the atmosphere as illuminating local formations of

are accompanied by influences on the technical means and can cause hindrances in the work of optic-electronic equipment and radiolocation instruments.

At present the task of the researches of the problem under study is further investigations of the nature, mechanism of the origin and development of the observed aerospace phenomena and the possibilities of their application or application of accompanying them effects.

2.2 The basic concepts of the investigated theme, interconnection between organizations-executors of the programme, the list of problems under study.

In agreement with the main lines of investigations within the limits of the programme "Thread-3" approved by the General Customer /m/u N 349/917, 24.04.1991/ the main task of the programme is to conduct investigations and work out the methods of registration and identification of abnormal aerospace phenomena, to analyse the physical principles of their origin and progress /including the principles of their transference in space /, their effect* on military objects, military technique and personnel, to fulfil the experiments on the possible application of the obtained results for the creation of military and industrial technical devices.

In the formulation of the research conception it is necessary, in our view, to make the most for keeping the continuity of the main directions of researches had been developed during the last ten years in the works of the organizations-executors, with the head of m/u 67947. The ways of further development of these lines are fully justified in the text of Supplement 2 of the report /38/ /also part 3.1 of the present report/. It is obvious that the researches will be associated with the observations of the sporadic AAP, the investigations of the mechanisms of their appearance and progress in connection with geo-physical activity condition and other factors /the testing and operation of rockets and other space specimens and etc./ Apparently the scientific-methodological foundation of the researches in the above-mentioned lines can be significantly improved with due regard to the achievements of geo-physics and owing to the creation of the automated information base possessing facts about abnormal phenomena, and also due to application of cosmic technical devices suggested by m/u N 73790 in Supplement 12 to the report /62/ for better research of the operation of possible non-traditional engines /based on the use of "active" thrust/ attended with radiation and abnormal aerospace phenomena.

Along with this, taking into consideration foreign experience and the results of home researches, it is necessary to do away with attempts to solve the problem at once, only at the expense of collection and working out of information on AAP observations. Parallel with traditional lines being developed by m/u 67947, it is important to catch up with the areas of development of the new lines in the researches based on the theoretical and experimental investigation of various versions of AAP under laboratory conditions with the application of physical and mathematical modelling.

The accomplishment of such researches effect the fundamental scientific laws have been established for ages, determine the problems, the solution of which can lie beyond the limits of the scientific-methodical apparatus of the modern physics.

The traditional approach to the conduction of such investigations, with traditional recruiting of "reliable

collectives of scientists of official science (academic and other scientific research institutes/ demands large expenditure, and leads to the lengthening of the period of researches for long years. So considering the limited financial position of "Thread-3" and the fact, that researches were planned only for the period 1991-95, for organizing investigations on the theme it is advisable to use the specificity of the market relations, to find unusual forms of cooperation which even seem to be incompatible: of the representatives of the official science and not traditional science and enthusiasts dealing with these problems as amateurs, who are able, if not to substantiate, at least to propose the hypothesis of the origin of AAP and to prove experimentally the rightness of their ideas.

The determination of the priority lines of investigation in time is of great importance for the success of the programme. None of the fruitful ideas must be lost.

For the fulfilment of the above-mentioned projects it is advisable to adopt the concept of research based on the following main propositions.

According to the analysis of the achieved level of solution of which will ensure the fulfilment of the programme are ascertained as follows:

1. The working out of the methodological directions of the collection, classification of information and the creation of the automated base of data about AAP and their influence on military and biological objects, the information of which are received from military units and other sources for the operative solution of the special problems including the problem of AAP identification.

2. The research of the possible mechanisms of AAP origin and progressing by the materials of reports received from the army.

3. The investigation of the possible physical mechanisms of the origin and progressing of AAP in their interconnection with the condition of the atmosphere and helio-geophysical activity and working out the methods of their prognoses.

4. The research of the physical mechanism of AAP processing conditioned by launchings and flights of rockets and other probes in space.

5. The conduction of instrumental spectrophotometrical investigations of abnormal perturbations of the own radiation of the upper atmosphere, as a result of tests in space.

6. The research of the physical principles of processes accompanying the formation of artificial plasma in the upper atmosphere, as a result of the ejections of elektron bunches and development of bunch-plasma atmospherics.

7. The testing of the validity of the hypothesis about physical principles of the origin and development of shaped radiations and functional physical fields which can accompany AAP.

8. The testing of the validity of the hypothesis of the existence, functioning and transference of Sarl's machine of artificial origin, obtaining unusual engine, as a possible analogue of AAP.

9. The testing of the validity of the hypothesis about possible transference of material objects in gravitational wavy "channals".

10. The research of the possibilities of the body transference at the interaction of substance with physical vacuum and the effects of "rotary gravitation" in use.

11. The research of the influence of the observed AAP on the instruments of military objects and working out instructions dealing with the registration of after-effects and protection against the phenomenon under investigation.

12. The estimation of AAP influence on the computer systems of ADF and working out instructions of registration of AAP in the army.

13. The research of flying apparatuses crashes associated with AAP, the estimation of the AAP influence on technique and flight personnel and working out instructions on safety arrangements at meetings with AAP.

14. The research of possible influence of AAP, plasma in origin, on technical devices.

15. The testing of the validity of the hypothesis of the possible influence of the "formed" radiation /FR/ and functional physical fields /FPF/ on the military objects and personnel and protection against them.

16. The working out of suggestions of the possible application of AAP individual features for military purposes and for the creation of industrial technical devices.

17. The working out of new hypothesis of the origin, development and influence of AAP on military objects and personnel and the ways of protection against them.

The first step in the investigations will be made in 1991. It will be aimed at the complex analysis of the problem by the organization-executor /m/u 73790/ with the participation of organizations co-executors, as a result at the end of 1991 a programme of complex researches for the period 1992-95 must be made. It will cover theoretical and experimental researches of the main directions, with concrete instructions of laboratory stands for conducting experiments, devices and special equipment.

The next stage in the fulfilment of the programme must be the conduction of theoretical and experimental investigations aimed at more precise definition of the UFO origin and it's experimental control testing both in organizations co-executors and in the laboratory experimental complex of m/u 73790, the possibilities of which are described in Supplement 12 of the Report /62/. The conduction of these investigation will have a rising intensity, as in the volume of the equipment occupied as in number of conducted experiments and will cover the period 1992-95.

The most intensive work is planned in 1993-94.

In the mentioned period, firstly it is necessary to conduct theoretical researches of principal problems of physical and mathematical interpretation of AAP, working out the scientific-methodical questions of data base formation and use, methods of calculation and modelling, mathematical realization, substantiations of schemes and arranging of models /dummies/ and experimental specimens. The main importance in this period will have the refinement of the scientific-methodical and organizing principles of the research of abnormal phenomena which can't be explained with the help of modern scientific knowledge.

Then the works on construction of models will be held enlisting the cooperation of design organizations. Private programmes and methods of testing will be drawn up.

In 1992 it is advisable to finish the choice and working out of the necessary equipment for the researches of physical mechanisms of the AAP origin, development and influence on military technique and personnel. As finances are rather limited it is important to use the "Serpuchov" experience of the organizing of fundamental experiments, when the group of investigators came from different countries bringing various instruments, apparatuses and equipment with them by agreement, for their work at the Serpuchov Accelerator. The same in this case, we can provide buying, working out and adjusting of equipment in different organizations-executors of the "Thread-3" programme with it's future concentration in the experimental-laboratory of m/u 73790 for the conduction of complex experimental researches.

In 1995 it will be necessary to generalize the obtained results in order to use them as initial data for future works.

The task of "Thread-3" in accordance with agreement N 600/3 about the first stage of the works to be finished in 1991 is to work out the hypothesis of the possible physical prerequisites and origin of the AAP, functioning of untraditional engines and

their interplay with environment, and also to get initial data /including data of controlling experiments/ for planning and conduction of experiments to check up the worked out hypotheses.

For the achievement of the mentioned task, in accordance with the scientific technical concept of fulfilment of the "Thread-3" programme, the following main lines of research have been chosen:

the research of the possible nature and mechanism of appearance and development of abnormal aerospace phenomena, working out of methodical problems of the formation of the information base about AAP and their influence on various technical devices;

the research of the processes of nontraditional engines functioning and their interrelation with environment;

the research of the possible origin of "formed" radiation, functional physical fields and their interrelation with environment.

3.2 Non-traditional propelling agents of vehicles.

3.2.1. The rightfulness of setting up the problem of non-traditional propelling agents researches.

The statement of the problem of non-traditional propelling agents of the flying objects in the "Thread-3" programme is based on the supposition of the objective character of UFO irrespective of the initial reasons of the origin of such objects, though it were fantastical /UFO - flying objects of strangers from other planets or the new comers of parallel worlds and so on/ or real reasons /UFO is a secret flying objects, made with the use of new technologies in one of the highly developed countries/.

In any case such supposition is rightful within the framework of the adopted concept of investigations according to which side by side with the versions of natural and anthropogenous versions of the character of the observed AAP we can work out the versions of their objective character, especially in non-identified cases.

According to the above-mentioned supposition, it is necessary to conduct widerange investigations in order to find out the new principles of non-traditional propelling agents and accompanying fields, which functioning and influence on environment don't differ from those described by "eye-witnesses" processes of functioning and influence of UFO. To the characteristic features of UFO

according to the information of the press and periodical editions the following /17/:

object's shape - more often it is a sphere, cylinder, disks; luminiscence - bright light with pulsating, multi-coloured, and other luminous effects;

sound - characteristic hum, crackling, the absence of the sound from the wave collapse at M/ 6

aerodynamic characteristics of the flight - overlarge rates about 19 km/sec. according to the data of radiolocation instruments/ and acceleration, unusual trajectories, sharp manoeuvres, oscillations, rotation;

other unusual features - unusual influence on environment, material traces of their appearance.

The enumerated indications have cast some doubt on the application of traditional propelling agents in UFO/jet engines propeller, balloon and others/ and demand the necessity to ask for advice the investigators of untraditional levitation of material systems and different physical fields.

Well-known representatives of science and technique from

10

outstanding scientific and science-technical centers as the Moscow University after Lomonosov, the Research Institute of Atomic Energy after I.V. Kurchatov. The United Institute of Nuclear Investigations in Dubna, the Physic-Energetical Institute, the Scientific Industrial Unity "Krasnaya Zvezda", The Central Design Engineering Centre of the Ministry of Energetics, The Institute of Complex Problems of the State Committee on Science and Technique and the Academy of Science of the USSR /p.2.2/ were included in the cooperation of the executors of the programme "Thread-3" in the present direction of investigations. At the same time the representatives of the so-called "non-traditional" science united in the temporary organized collectives at the scientific-consultative Centre "Rino" of the innovational Unity of the Academy of Science /B.P. Grosheven, G. I. Shipov, V. A. Bunin, A. F. Chernayev, G. V. Morozov, I. L. Gerlovin, G. V. Talalaevsky, B. P. Dodonov, L. N. Ruzhkov/.

3.2.2 The prognosis of the investigations of rotary gravitation in the interests of new propelling engines creation.

The main attention of the numerated above representatives of the non-traditional science was concentrated on the researches of the physical origin and applied aspects of the working out direction in the gravitational science devoted to the dynamics of the interrelations of the gravitational fields with rotary masses. In Supplement 7 to the Report /33/ it is pointed out that this line has been named as "rotary gravitation"

The authors of the "rotary gravitation" theory pay attention to the fact that from the "general theory of relativity" it is followed that rotating masses can be a source and therefore a reception of the radiated power in the form of graviradiation. Though the fact that the small quantity of Einstein's Constant prognoses the laboratory impossibility of reception and radiation of substensial energy quantities. Only large stella masses can generate the measured flows. To the investigators' mind Einstein's Constant can be call in question. This opinion is not indisputable. Nevertheless the same authors express the opinion which you can't but agree: "The truth can be determined only after experiments with rotating masses in the capacity of sources and receipts of graviflows"

The conduction of such investigations is planned in the Scientific-Consaltative Centre "RINO" in the second part of 1991. Experiments are planned to be held on the rotary installation with rotating rings like the installation of B.P. Groshaven. So far as it is low-rotating, it is supposed to conduct also analogues high-rotating experiment on the high rotating centrifuges. On the whole it is planned to conduct four series of control tests:

in the first place on the installations of the above mentioned types which allow to examine the effect of the weigh changing while rotating

the second series of experiments will be held in order to find out the connection between rotating masses by means of gravitational waves or perturbation of the space. In these series it is supposed to repeat the experiments of Golutva of the transference of the rotator movement through space/vacuum/.

the third series of experiments supposes the creation of models for the realization of the projects of G. I. Shipov, A. F. Chernyaev /G. I. Shipov has made a conclusion about the possibility of creation the propelling agents of the new type which are able to move from the water across the air in the space, as for it's basis they have not a interstitial space but the fundamental space - physical vacuum. A. F. Chernyaev has come to the idea of creation of the similar installations, while improving the theory of gyroscopic installations on the basis of the analysis of the horizontal wobbling of Langrazh's gyroskop.

According to the available data/55/ in Japan it has been achieved the change of the weight of the object freely rotating on the surface of the gyroscope by 5 per cent, which witnessed in A.F. Chernyaev opinion about the initiation of the outer carrying force.

The fourth series of experiments will be held in order to check up theoretical models and identification of coefficients included in the main gravitational equations, obtained by the authors of the theory of "rotary gravitation"/G.V. Talalaevsky, G.V. Morozov, and others/ particularly in the equation reflecting the prediction of G.V. Talalaevsky about existence of the critical rotating rate, the exceeding of which must lead in the author's opinion to emergence of the negative weight and the weight equal to zero.

We should do justice to the authors working out in their opinion new directions in gravitation, as they self-critically consider that to speak about new theories is untimely.

It can be pointed out that all theories been worked out have in common:

a/ The acknowledgement that physical vacuum is physical material space.

b/ the acknowledgement of its complicated structure

c/ the acknowledgement of the tensor fields of Einstein as a maximum simplified case in statistical approximation;

d/ the acknowledgement of wave gravitational processes connected with rotating of masses in force.

It will be of great importance for practice /if being confirmed/ theoretical conclusions of G.V. Morozov about the discrete character of all gravitational phenomena which explains in the authors opinion the dispersedness of experimental data of the weight change at rotating by from 0,5% to 10% for similar specimens. It can lead to the necessity of experiments with ring structures /not massive structures/ giving averaging over diameter and mass characteristics.

In the review of a professor, doctor of physical mathematical science R.N. Kuzmina of the materials of Scientific Consultative Centre "RINO" dealing with "rotator gravitation" it is noted, that in part 7, prepared by G.V. Morozov "Food for brains" exists, especially in the part which is talking about "making a bridge" between gravitational, electro-magnetic weak and strong interplay".

G.I. Shipov's conclusion about interrelation of translational and rotating movement in space has been appraised by the "official" science as advisable and promising, but without examples and numeral estimations the conclusion "runs idle"/25/

On the whole with the correction for the authors' predilection for sonorous terms and lack of explanations for some principal moments, the representatives of the "official" science have regarded with favour the materials under consideration and made the conclusion, that the problems risen in the work are of great interest, and such investigations are worth to be continued.

3.2.3. The investigation of the origin of the processes of solid bodies levitation with the tapping of strictly-ordered atomic-molecular structures.

In Supplement 9 to the Report/61/ it is set forth in a condensed form a fundamentally new, in the author's opinion /P. I. Rusanov and V. D. Fedorovich/ concept of levitation as a physical phenomenon, "achieved by constructing strictly-ordered molecular structures of surface layer of a material body". To the authors' idea /which is rather hard for understanding for readers not acquainted with terminology/"levitation/imponderability/ as a physical phenomenon may be conceived as a property of strictly-ordered molecular structures of some chemical elements /molecules on their base/ and the basis of which it is ensured the formation of strictly-ordered /with designated direction and density/ fluxes of proper radiation in plasmoids /microstars, releases, microleptons/.

To the theoretical ideas of authors "ordered and/directed/ fluxes of such plasmoids when interrelating with outer field radiation /including gravitational/, stop the interaction /on the fluxes' level/the structures of a given body with surrounding outer material bodies, which appears as the effect of imponderability". Such theoretical views are not shared by the representatives of the "official" science. It is declared in Supplement 3, part 2 /25/: "The ideas of substance structure, developed in the text of the review /61/ are of no value, because nobody besides the authors can understand the idea. Generally accepted concepts and notions about substance structure are practically absent, and introduced plasmoids /!/: microstars, releases, microleptons have no distinct definitions. As a result the value of the theoretical part is equal to zero."

The most interesting in the materials of Supplement 9/61/ in our opinion, as in the materials of all other authors, drawn in the works on "Thread-3", is presented in the experimental part. It is presented the experimental installation scheme for measurement "the coefficient of levitation of the non-ordered structures of solid bodies in the form of ferro-magnetic structure".

The essence of the experiment is as follows:

at the rotation of the platform with a ferromagnetic pellicle /packet/ as time passes, the process of "the accumulation of microleptons, releases, microstars/" in the centre of rotation starts. The evolved into existence "cloud of microleptons changes /lessens/ the force of gravitational interaction between the tested body and the Earth". It appears as "a tested body weight loss, which in its turn reduces the angle of the twisting of the spring thread with secured to it reflecting mirror". "The change of the angle of laser flux incidence is reflected on the calibrated dial in the screen. More over the paramount part in the appearance of the levitation effect, as it seems to the authors, is assigned to the ferromagnetic pellicle, manufactured due to the technology, suggested by the authors /know-how/, and is represented as a constructors' realisation of "fields-structures of microstars /releases, microleptons/ with the features of levitation". Apropos of this it is presented in the materials /61/: "The idea of the realisation of radiation energies is concluded in the fixation of alignment atomic-molecular structures which ensures the position and density of microstars /microleptons, releases/ manifesting in the effect of levitation". Here and in other places the authors' text is quoted/.

In the series of experiments conducted by authors "packet /5cm thickness/ made of thin magnetic pellicles with calcic magnetization, at the rate of rotation - 100000 r.p.m. and

12

duration of an experiment about 1 min. the registered weight loss /effect of levitation/ was 2-3% of the weight of the tested body" On the second stage of the fulfilment of the programme "Thread-3" the authors suppose to repeat control experiments with the demonstration of the obtained effect.

In the "official" Review /25/ the attention was paid to the main shortcomings in the experimental part: the absence of the description of the experimental weighing of tested bodies. In the review it is also noted, that any combination of superconducting /the authors have an indication to the "superconductors" of pellicles/ and magnetic pellicles can lead to the results similar to those described in the work /61/ but it bears no relation to the process of shielding of a gravitational field. It is also noted, that the combination of magnetic and electric fields of different materials, circulating and not rotating can lead to the analogous results. Nevertheless, in physicists' opinion, expressed in the review, special experiments dealing with weighing of tested bodies must not be conducted on the authors' installations, as these experiments are very delicate and it is possible to conduct them only in well-equipped laboratories /in the USSR an Associated-Member of the Academy of Science V.B. Braginsky is a master of such experiments/.

At the same time, in spite of the precautions of professional physicists, in our opinion, it is advisable to give a chance to the authors of Supplement 9 to demonstrate the possibility of solid bodies levitation, with "strictly-ordered atomic-molecular structure" during fulfilment of the second part of the programme "Thread-3" in 1991. In the case of even little success of this experiment, it could be repeated with the application of "delicate" methods of weighing, and also with the use of a centrifuge, working out for the programme "Thread-3" in SDEB of the Ministry of Atomic Energetic Industry of the USSR /Supplement 3, part 3 /25/. It mustn't be excluded the possibility of conducting control experiments in V.B. Braginsky's laboratory.

13

3.2.4. Researches of the statement and examination of the hypotheses about the physical mechanisms, as the basis of the processes of functioning of non-traditional propelling-agents as Sarl's machine

The largest attention at the first stage of the fulfilment of the programme "Thread-3" was paid to the researches of non-traditional proppeling agents as Sarl's machine, because the forming of the new direction in the reseaches of abnomal aerospace phenomena is closely connected with it. Many theoreticians, experimentalists and designers were enlisted to work out the given line.

The results of the first stage of researches come to the following.

Scientists*physicists from the United Institute of Nuclear Researches AS USSR, the Moscow University, IAE after I.V.Kurchatov have made a qualitative examination of the physical principles of non-traditional levitation of material systems in various physical fields. The results of this examination are presented in Supplements 2/21, 22/, 3/25/ and 6/32/.

Main attention was paid to the treatment of levitation in known physical fields within the framework of physical laws of conservation. Simultaneously, changing the usual oppinion about "official"scientists as "orthodox" who hamper the development of new ideas, the same scientists treat the idea of the possible way out of our thinking to the quatatively new level which helps to accept and comprehend logically new physical fields and variants of movement effecting the dynamics of abnomal phenomena processes.

Sarl's machine has been taken into consideration as a material system possessing the features of non-traditional levitation to the greatest degree. It's description has been already given in part 2.1.2 /the foreign publications about Sarl's machine are presented more completely in Supplement 2, part 4 /24/.

Proceeding from the assumption, that Sarl's machine exists really, physical'principles which can explain the operation of this machine, it's levitation in air space and vacuum have been examined. On the first stage the limiting statistical estimation of the physical fields /within the framework of the conservation laws/ which can bring to the levitation of the machine with a great possibility. With all this, leaning on the principles given in Part 2.3, which are under explanation from the view of modern science, it has been accepted necessary to use the principle of "Okkama's razor" in full measure - to examine Sarl's machine as a levitating object within the framework of known physical fields and physical laws of conservation and only after that sequen- tially and methodically try to solve the problem under fundamen- tally new hypotheses.

Among the possible ways of producing levitation they have considered not only known ways as / Meisner's effect, hoisting Archimed's force in airspace and others/ but also other methods of non-traditional science with it's new physical ideas / the interaction of electro-magnetic and stationary fields of acceleration with the curveness of space-time, gravitational waves, generating marked "channels" in space, "demon" of Maxwell, biofields, exotic particles: axions, microleptons and others/. While considering non-traditional new ways, attention was paid at one of the interesting possibilities of creation of a field in

14

vacuum for material objects transference. It presented the local redistribution of fluctuations of vacuum fields with the help of outer ray fields, which would ensure the transference of the object in a preset direction. Unfortunately, the search of this new effect is made difficult by the lack of strict theory of physical vacuum as inferior energetic state of quantum fields.

Together with this "official" physics, as well as representatives of non-traditional science, developing the line of "rotary gravitation"/part 3.2.2/ express an opinion that "though today the real possibility to create the laboratory project of a levitating object on the basis of vacuum effects doesn't exist, it's only the question of time, as the science of physical vacuum is picking up quickly.

On the first stage due to the principle of "Okkama razor" the levitation of Sarl's machine is considered in detail subject to the physical laws of conservation.

From the description of Sarl's machine /24/ it appears that it consists of combined magnetized and current carrying elements. The dynamics of such systems is well-known, it fully conforms to

the physical laws of conservation and can be detailly analysed within the framework of electro-dynamics, aerodynamics, gravitational dynamics. In principle this problem has no special physical paradoxes and it's full solution is only a question of time. The cooperative organizations participants of the programme "Thread-3" have already started the preparation of the full mathematical model of the functioning of Sarl's machine. The first results of this work are presented in Supplements/22/

According to the constant of interaction, it can be expected that the most force influence on Sarl's machine must be exerted by the field of force of electro dynamic type, generated in airspace just around the machine. The sources of these variable in time and space electro-magnetic fields are rotating permanent magnet made in a roller form. Variable electromagnetic fields induce in the machine elements and airspace electric current of conduction. Obviously, magnetic fields and currents of conduction can produce an outer force and effect the machine as a hoisting force.

All combined forces including in a hoisting force are presented in Fig.3.

The conduction of maximum estimations of these forces show that forces bound up with the Earth magnetism count very little in the generation of the force of levitation. These forces can only be used for the correction of the movement of a levitating system. Electro-dynamic forces can have a sufficient value for producing a hoisting levitation force.

The variant of producing of hoisting force with the help of a combined electro-dynamic system has been also analysed. The question is about aerodynamic force which can be produced in machines with two magnetic "skirts"- upper and lower - by placing aerodynamic wings in these skirts /Fig.4/

On the base of the analysis of forces taking part in producing of a hoisting force of Sarl's machine, the construction of the electro-magnetic model, the general view of which is presented in Fig.5 has been worked out.

The description of the test model and working place where experimental researches are planned to be held is given in Supplement 4 /28/ The manufacture of the first experimental models is planned in 111-1Y q. of 1991.

The model consists of a disk with radial ribs, equipped with a circle shell-skirt. Disk is made of electro insulating material. Four coils with cores-magnetic-conductors are installed on the brackets of the disk, evenly along the circle. Intermediate canals are situated between the coils in the disk's windows. On the opposite sides of the canal along the force lines of electro-magnets electrodes are fixed, one of which is smooth and the

opposite is equipped by needles installed in a definite order. It is supposed to produce a hoisting force of about 4 kg on this model.

While investigating the processes of Sarl's machine functioning, two approaches to the problem appeared. The first approach has been considered above. It has been developed by A.F. Pisarev, a doctor of physical and mathematical science, professor.

The second approach is being worked out under the leadership of R.N. Kuzmin, a professor, doctor of physical mathematical science. This approach is based on the statement, that the construction of Sarl's machine according to its description in literature can clear up its main constructive features and physical principles, which permits to find right ways of its realization.

For the lack of time which was planned for the fulfilment of the first part of the programme, they have only managed to manufacture only the model of the central "gyrocell" of Sarl's machine /CDEB of the Ministry of Atomic Energy of the USSR/ which is drawn in Fig.6. A detailed description of the model and experiments fulfilled with its help are presented in Supplement 3. It has been established experimentally, that it is possible to lessen the links of cylindrical magnets/rollers/ to the posts of the both rings of the "gyro-cell", so at a definite rate it can appear a suspending system of cylindrical magnets, which turns around the system axis and around their own axis in vacuum without friction, which can practically exclude dissipations in the elements of the construction of Sarl's disk. In Kuzmin's opinion the optimization of magnetic fields configurations can be achieved only experimentally. Even the first experiments with the given simple model have shown, that some peculiarities can appear, it is necessary to take them into consideration when constructing testing stands. The description of one of the stands is given in Supplement 3/25/.

In such a way as to research NPA by the example of Sarl's machine, it is necessary to work out and construct two types of experimental models:

-an electro-dynamic model for the investigation of the possibilities to obtain a hoisting force in the air by the effect of electric and magnetic fields generated by outer electric energy on the particles of air.

-a magnetic model to conduct experiments with magnets in order to research the appearance of variable magnetic fields with the interaction of permanent magnets, fixed in rollers and rings, analogues of Sarl's machine elements.

It is supposed to use a laser magnetometer of the Institute of Sinenergetics of the MU for measurements.

For conducting the first control experiments the possibility to use working places in SIU "Red Star" and in CDEB of the Ministry of atomic energy will be considered. In future in 1992-93 these experiments will be continued at the experimental complex of m/u 73790, the depiction of which is presented in Supplement 12 /62/. The scheme of the stand for such experiments is pictured in Fig.7. in Supplements.

16

3.3. Functional physical fields and formed radiation.

In the "eye-witnesses'" reports about UFO observed by them, it is often noted, that they felt the effect of some supernatural forces and influences of invisible resilient obstacles which don't permit to approach at UFO and so on. Many UFOlogists consider that one of the character features of UFO is the presence of both usual well-known radiations /for example, electro-magnetic/ and unusual abnormal radiation able to exert unfavourable influence on people and technical devices.

So being consistent and continuing the version of the objective character of UFO suggested in part 3.2, we suppose that the appearance of UFO must occur with some unknown and little known fields interplaying with environment. According to this i we can't exclude the fact that these fields are not only "by-products" of UFO functioning, but determine ingeniously UFO functioning or the work of impellent and energetic plants.

Considering only their role in functioning it has been agreed to call such little known fields "functional physical fields"/FPF/ at one of the meetings of future co-executors of the programme "Thread-3" which was held in September 1990.

The research of FPF under conditions when we haven't got even trustworthy scientific information of the sources of UFO, the problem seems to be practically unsolvable. The only possible way to investigate FPF in link with UFO in our opinion is the way of the indirect research of the phenomenon presented in part 3.2. The successful interpretation of this way was presented by specialists of the Physico-energetical Institute of the Ministry of atomic energy industries /part 3, Supplement 5 /31//: "It is necessary to conduct detailed, wide-scale researches of the effect of some little known fields on physical, chemical and

other features of substance in order to expose the fields which influences will not differ from those of UFO. No less important task of such researches is to find out physical principles of their functioning in the energetic and other main systems of these objects.

This problem is rather widespread and at present only main lines of it can be presented. As the main lines on the first stage of the fulfilment of the programme "Tread-3" were chosen the following:

1/ the extension of all known and little known data about FPF, versions of their origin, progressing and interaction with environment;

2/ the revealing of the ways of identification FPF and their registration.

For conducting this investigations in the outlined directions, representatives of large scientific schools and of the so-called non-traditional science, including specialists with extrasensor abilities have been recruited. The preliminary results of these researches and their analysis are presented in Supplements 3/25-27, 5/29-31/, 9/35/, 10/36 and 11/37/.

When organising these investigations and presenting results in the report it was used in full measure "the

17

2.3. So the materials of authors representatives of "untraditional science" were included in Supplements 5 /part 2/, 9, 10, 11 without editing. The scientists' reviews of some parts of the given material are presented in Supplement 3 /25-27/ and 5 /29-31/.

However a search for untraditional interpretations of FPF has touched upon a large amount of information, and it has turned out that reviewers were unable to work out this large amount of information during a short period of time. /from 25.05.91-the beginning of the financing of the programme "Thread-3" by the General Customer/. The analysis of these materials will be continued during the second stage of the programme.

The most exotic versions of the origin of FPF and their interaction with environment are presented in Supplement 11 /37/. They are connected with suppositions about close interplay of "antigravitational" technologies, "death barrier" and forms of cosmic consciousness, possible influence of consciousness on a time flow. Such interpretations have appeared lately in different variants in UFOlogists' groups, groups dealing with bioenergetic effects and others. The importance of this direction in investigations of FPF and linked to it in it's processing formed radiation, will be estimated by the "official science".

However, inspite of uncommonness and imperfection of style in these materials, it was decided to include them in the materials of an intermediate report, though for their systematization and future discussion.

"Micromagnetic theory" widely popularized in the press and on TV by A.F.Ochatrin is not less exotic. The final opinion of this theory has not been yet formulated by the "official science". But even on the first stage of investigations it was called in question in Part 2, Supplement 3 /25b/ and in Part 1 Supplement 5 /29/. The main shortcoming is the lack of proofs of the author's theoretical materials, the absence of the replicates of experiments, which are to prove the possibility of the registration of "microlepton" FPF / During 9 month period of close work with the head executors of the programme A.F.Ochatrin failed to demonstrate control experiments in confirmation of his already published results/.

In order to check up the way of the registration of "microlepton" FPF and FS suggested by A.F.Ochatrin, experimental installations for control experiments were manufactured /with the use of "black box" in SIU "Granat"/29, 30/ and in the organization -general executor /29//.

These control experiments must play the determining part in the estimation of the truthfulness of the "microlepton" theory of FPF and FR, because this theory seems to exist only owing to the fact that serious scientists don't want to investigate it.

The control testing of the "microlepton" interpretation of the processes ensuring the work of the so-called Tesl's generator /30 / was conducted in SIU "Granat"/29/. On the special case of this generator it has been shown that it's work can be explained with the help of modern science without invoking exotic hypotheses.

The theoretical description of the generator and the results of experiments explain that the essence of the phenomenon can come to the conditional resonance of various processes going on in one system, namely: it was established the resonance of cyclotronic frequency for electrons /the second subharmony/ and frequency of the running wave of the current in the wire turned in spiral.

Besides that in the work /29/ were considered short impulse of micro wave radiation as a type of FPF. It has been noted, that it has some unusual features, which A.F.Ochatrin has subscribed to microlepton formed radiations and FPF:

- high penetrational ability, also in screened objects,
- biological influence at insignificant middle impulse capacity
- high effectiveness of influence on semi-conductional

18

Such features can be applied to engineering.
In this way, preliminary investigations on the first stage has found out that at present information about FR and FPF in official editions is practically absent, the origin of FR and FPF hasn't been defined, and the work of corresponding technical installations has not been justified. Only subjective features of FR and FPF and some constrictive peculiarities of instruments and installations for generating and usage of FR and FPF have been generalized.

19

On the second stage of the programme the researches of FR and FPF it is planned to discuss the versions of the representatives of "non-traditional" science, to conduct control experiments confirming the existed hypotheses of the FFP and FR origin and their interaction with environment.

3.4. The peculiarities of AAP, NPA, FR and FPF interaction with biological objects and necessary precautionary measures.

When observing abnormal phenomena/objects/ in some cases the deflections and defects of the operation of radioelectronic, optoelectronic, electrotechnical instruments, mechanical devices of military objects and technique and besides that the influence on the sensory apparatus of people have been registered. It can lead to the following grave consequences: non-adequate estimation of the situation by the operators of radio location stations, controllers of movement of transport, crews of aircrafts, naval depots; difficulties in the fulfilment of special purposes with the use of aparatuses under influence.

The facts of UFO influences on people and biological objects are presented in Supplement II to the Report.

As a head executor in the researches dealing with peculiarities of AAP, NPA, FR and FPF interaction with biological systems and working out of necessary precautions, MSIE "Druzhina" has been chosen.

As initial points in the science activity of the enterprise have been noted the following:

- the consideration of the operator conditions under fields influence, with the supposition that any outer influence can come in resonance with his private endocrine system rhythms and can intensify some of them, causing desynchronism in functioning of an organism as a whole;

- the choice of the definite sequences of measures aimed in the first place at teaching a person to determine the fact of danger and then to work out actions of precaution adequate to the level of outer field's influence.

With all this the programme of working out precautionary measures at conducting experiments of FR and FPF is concluded in the following:

1. the study of the conditions of biosystems under the effect of non-identified radiation spreading in the extend of various types.

2. the study of the dependence of biosystem reactions on FR and FPF influence;

3. the evolution of devices for the control of the condition of biosystems under non-identified radiations.

4. the working out of the ways of indication of non-traditional radiation influence.

. \

Report Conclusion

2/ Luminous effects:

On the night of 27.09.1989 Dzhapakov, Porsev and a biologist, Peteris by name observed on the field/at the same place, where we saw "coquettes" an orange spot 1,5 metre in diameter, it "swam" above the field at 10-15 cm. height above the field. Dzhapakov and Porsev stayed on the road, and Peteris went to the spot and stepped in it. He felt as if he was in an ice-hole. Dzhapakov and Porsev saw that the spot disappeared, then appeared again behind Peteris; Peteris went forward and the spot followed him and then faded away. Peteris went back to us and told us about the feeling of cold.

Dzhapakov saw illuminating columns at the height lower than the crowns of trees. He also saw a star shining through the branches of trees. Then the star began to come nearer to him. It was blue-violet, like a coin in visual size. It moved here and there from side to side as if playing, so he called it a "coquette" and when he saw the same in the field two nights later he said: "Oh, an old acquaintance"

On 29.09.89. in the daytime, on their way from Molebka /they went there to buy bread/ Dzhapakov and Porsev saw two flashes: one above trees was strong and the other against the background of the trees and it was weaker. On the same day our photographer made a photo of an illuminating small ball in branches. The ball was in the picture and beside it there were two more balls a bit smaller at the foot of another branch which was 10 metres nearer to him.

On the night 29.09.89. several people from a large group saw a illuminating ball, "dumb-bells" and stripes. Two men from the group went to them, but suddenly two sticks connected by a thread appeared in front of them at 5 metres distance. They effected danger. So the men were frightened so that they started to move backward for some time and then turned back and ran away.

On the night of 3.11.89 two young men from Tumen, psychiatrists by profession came to examine to their words the cases of mass psychosis. At about four o'clock a.m. they were awakened by a terrible noise. They went out of the tent quickly, they saw an illuminating opacity sphere at 10 metre height above the river /their tent was on the bank of the river/ it flew by them at 30 metres distance. It was about 20 metres in diameter. After that it lifted above the steep bank and seemed to land near the village Vuselky. In the morning a thawed patch was found near the village. The diameter of it was about 30 metres. The ground was still warm. Two hours later a group with Geiger register, it swept over.

3/ Feelings:

On 28.09.89 we met a group from the city of Kalinin near the Zone. One girl from this group heard the call and went out of the tent and stood stock still as if praying. There was also a professional photographer who spoiled all his films by light not by chance, he was very much upset but couldn't explain who made him do that.

Dzhapakov told that on 27.09.89 two physics from Karelia came to his tent and asked him to see them to the village. They were very much afraid, their lips were white, eyes were empty. To all questions they only answered: "No... No..."

Alvira Valentinivna Bukova, an editor of the newspaper of the town of Votkins told that once they went to visit Bachurin's group. They went along the edge of the field. Suddenly she felt a firstly a warm and then hot air wave from the right. On the back way they went through the forest and suddenly the same feeling a warm wave spread from the fingers up along arms. She stopped and

closed her eyes and saw her own silhouette as if from above. All silhouette was filled with orange light, orange small balls were running along her arms, the feeling was very pleasant and seemed that she was near to fly above the Earth, but she remember that her daughter of 16 was with her and she was afraid that her daughter would, be frightened, in order to leave the place the woman jumped forward as if over the hurdle and everything disappeared. She was sorry that she had left the place and returned, but only hands were filled with orange.

4/Instruments behaviour and other phenomena:

When Porsev had an attempt to make a photo of an illuminating spot, firstly a flash didn't work and then there was something wrong with a shutter.

The electronic watches of one of physics from Karelia stopped.

Radiostations lost their tuning every time when the "strange station" worked. Kozlovskiy one of the workers of the radio station had an electronic watch which gained 20 min or lost 2 minutes in different places, though it was all right, when he left these places the watch worked right. Another radio operator had a mechanical watch which also lost about 40 min. and then restored the right time itself.

A group from Riga conducted an experiment they put a mechanical watch in a can and digged this can. The watched lost 15 min. for a day, but then worked right.

Porsev made a photo of people around the fire. In the picture there was a formation like a tree with branches on which there were illuminating brushes. The tree was semi-transparent. The same effect was in Kunin's picture. They both said that it wasn't the defect of emulsion.

A group from Votkinsk went to the Zone once more in November. They saw two stars sink on the river. In the morning they went to this place and found two ice-holes cut. The circles of ice 180 cm in diameter. Near the bank one more, not circle, semi-circle.

Marina Kuzovleva, a woman from our group which had hard headaches in the Zone, visited it once more in November, but felt nothing. She told that once at night she went along the bank of the river when suddenly from the opposite bank a black square silhouette rose and moved to them /she was with another woman/. It went into the river and they heard splashes. They felt terrible fear and ran away, after some time returned with a group but saw nothing.

5/The stories of inhabitants of this place:

The flight of various objects, of different colours and shape flew regularly/1-2 times a month, more often in winter. They were observed by many people of different professions, a director of a school, an inspector of the State insurance company, a sailor and others. They told that balls flew and landed in the Zone. Children ran there and tried to find landing places, but failed.

There are no mushrooms and berries in the Zone, though on the opposite bank there are a lot of them. Once they found a high metal stick digged in the ground, they tried to take it off and didn't manage. But when they returned to the place on the next day they found nothing but a hole. The director of a sovchoz told that people often saw disks and balls, he saw them even in his childhood.

Not far from the village Andropovo milkmaids and a watchman saw black giants without heads not far from the farm.

Schoolboys from Molebka also saw them too. The giants were two men high, don't permit to come to them, immediately hid and went into the forest.

A man who put us across the river told that he never saw them but his friend saw a day before.

file mind

Everyone receives information according to his intellect. I have come to such a conclusion when comparing information obtained by a man in a contact with his individual spiritual and intellectual "I".

The book of Belesin, an electrician, is called "Cosmos and we". He wrote this book at the end of the seventieth /he had a contact in 1975/, he sent it with a short letter to the former President of the Academy of Sciences, academician Aleksandrov. He didn't describe his contact in details in contrast to Kostrikin. We were to "draw out" the details from him. He told nearly the following.

He was fishing in the country. Suddenly he heard a voice behind his back: "Is the fishing good?" He wanted to answer something rude, turned out and saw two very attractive young men, whom he couldn't be rude with. He came up to them and started a conversation. It was not that he realized whom he was talking with immediately. The first guess-work came to him, when they asked: "Do you want to know everything?" He was taken aback. Then he realized that he was not laughed at, that he was talking with the representatives of an alien world. Firstly it was mere guess-work, but then he was sure, when he realized that he was hearing the Russian language not with his ears, but with the back of his head. They explained to him that in order to get great knowledge, it was necessary to comprehend the inner sense of the alphabet and accordingly the sense of basic words of the language, that all languages were connected with "bridges"-codes. In other words between all languages and alphabets on the Earth rather strict functional links existed. The realization of it was the shortest way to scientific discoveries, made not sporadically but spontaneously. Belesin's memory, to his own words was very bad. But their lecture on the alphabet he remembered for all his life word for word, as if it had been recorded on the tape inside his head.

The main part of their lecture was devoted to the alphabet /it's concealed essence/. This part, as Belesin understood it, was presented in his book "Cosmos and we". The rest part of his book presented his own conjectures based on the secrets of the alphabet. From the point of view of specialists, there are many questionable and even incompetent places in his book. But among this dirt there are some nuggets of gold, which are very surprising as the author hasn't even secondary education and knows very little the basic scientific subjects.

Here are the parts of his book:

Chapter 1. Main dynamics laws.

- 1.1. Introduction
- 1.2. The first and second law of dynamics.
- 1.3. The third law of dynamics.
- 1.4. The law of gravitation.

Chapter 2. The alphabet of the matter. Introduction.

- 2.1. The alphabet.
- 2.2. The ether
- 2.3. The ether phenomena.
- 2.4. The alphabet of substance.
- 2.5. The alphabet of organic substance.

Chapter 3. Astrophysics.

- 3.1. The alphabet Ash-Oma.
- 3.2. The structure of the galaxy and world.
- 3.3. Cosmogony.
- 3.4. Theology.

Chapter 4. The task which the cosmos puts for us to solve before 2000 year.

4.2. The way of the Moon annihilation and technical means.

23

While being in contact Belesin asked them a very important question: "In what earth sources were the cosmic wisdom impressed?" And got an answer: "...in ancient religious-philosophical teachings and in ancient epos.

The additional information is as follows. They said that earthmen were worthless in most cases, but there were wonderful exceptions among them, for whom the work on saving our civilization was conducted, for in future these exceptions would be in majority. There was a so-called "The Soviet of the Elders" in the cosmos /extrasages/, which had the functions of coordination and solved the most important intergalaxy problems. The duration of life of the representatives of these high civilizations was much longer than our, and the duration of life of the members of this "Soviet" was practically unlimited. There were no war conflicts between high-developed civilizations.

At parting they promised Belesin their help and support, if he clashed with difficulties in his "missionary" activity.

Some interesting places from his book-report are set forth below.

"Calling things by their proper names, UFOs are representatives of more developed civilizations in the universe.

Nevertheless even people being in contact personally can not answer the questions, who they are and where they come from, what the purpose of their visits is.

...UFO-nauts sometimes contact personally with our people, and choose from us those, who can't present in a clear, convincing form the meaning of this contact, because of their low intellect and illiteracy. And that's fine, because as a result we have "a smoke without a fire" or "believe it or not". And it is good, because our world is not yet free from mysticism and superstition"/compare it with Kostrikin's words-L.Ch/

But however here logic fails him. Because this secrecy of these contacts only increase these superstitions. But what can we do? They know best. So it is necessary to be so...

Belesin and Malishev mention unusual smiles of visitors from alien planets. Belesin: "It is as if a flower blossoms out..." Malishev: "It is calming, relaxing and very attractive..."

A contact with a young woman /let's call her A./, a biophysicist, took place on the night of October 3 in the town of Pushino. She didn't sleep that night, as she suffered from insomnia, she came out to a balcony. Suddenly, above the Oka from the side of the forest reserve a saturn-shaped, metallic apparatus appeared. Firstly some light columns seemed to separate from the apparatus. They were about twenty of them. These columns started to dislocate above Pushino. Then she discerned that these columns were "standing people" in the uniform of soldiers-border guards, their faces were young and as if paralysed.

One of them was flying near my balcony to the nest. I was afraid that he would frighten people and there would be a scandal there, so I made a gesture inviting him, and he immediately turned back and stood near me on my balcony noiselessly. He looked about 19, and was about 1.90 metres tall... I was silent and he said in Russian smiling:

-Have you realized who I am?

-Yes, but why are you in this uniform?

-I would like to speak with you.../And further the conversation continued in the room/.

-You are speaking Russian very well

-I have tuned up, and speak the same language my interlocutor does.

-But you were going not to me.

-No, to you. But usually people are frightened very much and so I

I started with anthropoid ape...And suddenly we found ourselves in a primitivi community society and so on. He explained that it was only the world I imagined had nothing in common with real history. We learnt all our history for about twenty minutes...

I told him, that we /the Soviet Union/ considered our society to be the best. He smiled. I said, that we had no private property and etc. I explained to him what this private property meant, I told him about colonial wars. In connection with wars I told him about Ulster, and suddenly we were there, and everything was very real there...He said that it was reality. I was frightened and he made us return /further A. saw all these Ulster exchanges of fire on TV-L.Ch. / Then we were somewhere in Asia, in jungle and saw mutual annihilation of two bands of druggs' sellers...

I asked him, why they didn't want to contact with us. He said that they had studied our planet very well. "You earth-men can't understand our interests. According to our notions your planet would be able to include in our system of interplanet communications, but your morals are very low. Your mankind has been following a wrong way and has come to a deadlock. Your thinking is very mean and hard. It's all mankind's feature."

I as our earth patriot tried to prove that we were not so bad as he said, that we knew about our imperfection. He said, that we couldn't realize this, and there were very much dark in us.

He said that we were to find the way out ourselves. They didn't know another place in the Universe to be so complicated. But he said that our earth science permitted us to learn much in the system of intercosmos communication, but we couldn't be allowed to it.

I asked whether the theory of the pulsating universe was right /remember Kostrikin's words/

He said that it was a wrong idea connected with our false way of thinking.

It seems to me that they are only observing us and not going to help /because we simply have other "guardians" information got from Malishev and Kostrikin/.

I asked: "Where are you from?" He asked: "Do you know astronomy?" I answered: "As much as a biologist can". He smiled and said: "It is a way of cognition and education can't be due to sciences, either you have education or not...We are very far from here, so far that I can't even explain to you - from the Universe". He said that our Earth was a very convinient place for communication. It seemed to me that we were not very important phenomenon on the Earth for them. I was upset and he felt it...He was surprised at our division into countries...We have a great difference between people. They have nothing of the kind. They have a great difference only between children and grown-ups.

The talk was as follows:

He strove for learning much about us and about themselves talked only when I asked, answered very briefly and often evaded a question. He said: "You will not understand". He couldn't understand, what our earth love meant. What a family was, he understood. They have no families. Love and children exist. They have no states. He said that dividing in states was wild.

He asked me to treat him as if he was my husband for him to realize the essence of our earth love. I answered that I couldn't as it contradicted my morals /A. is married-L.Ch. / He didn't consider the formation of a new being to be connected with love. "It is a deed". And their love is something very different, an exchange of information, ecstasies, a part of a spiritual mystery, which they protect in each other...

-Why did you choose our town?

-We feel where many intellectual people are.

How do you look like for each other?

-We can assume any pleasant for each other aspects.

-and children?

-They look like an information which they have got /plants and etc./

- and death /A. is an atheist as Belesin/

- you can't understand this...We simply finish one stage and come to the next one.

-Does hatred exist?

-No, you can't understand this.

-What is our future?

-Your planet will not be ruined.

But I felt that his attitude towards people was so that it was unimportant for him.

-your have a horrible way of thinking and thrust your opinion on you children. When the way of your thinking changes, then you will change morals.

He said that it was already dawning and it was time to go back...

We came again to the balcony. He didn't give his hand, he didn't touch me at all. He "swam" in the air in the same way, then turned into a "stick" and approached to the ball and the ball dissolved in the air...It was about 4 a.m. and all this began at 2 p.m."

Here are presented the most interesting questions and answers during my interview with A.:

1. Where did they fly?

-He said they fly to themselves. He said that their task was to establish connections among all civilizations of the Universe. They flied along this way of connection. He said that it made sense to establish this connection from time to time. I asked: "What for?" He said: "You can't realize this problem".

2. Was it said anything about children's origin?

-He told me: "You can't understand that, but it is a result of sexes interaction. Children are great blessing.

3. Tell me please about the mystery of every person as much as it is possible /in comparison with us/

- We propect the mystery of another person very much and don't interfere. We have no bad thoughts and hostility. If we know that it has appeared something secret in somebody, we wait till these thoughts will mature and he will tell us about them. Other persons mysteries are common weal".

"Death is simply a trasference in another forms and it comes according to our wills"...He told me, that I had a great fear of death. That here on the Earth this fear surprised him. Everyone has it, it is some motive force...

In conclusion it must be mentioned that before this contact A. considered all stories about UFO to be pure inventions.

Certainly, the cases have been mentioned above are only a small part of all cases that have had place in this country.

file abroad

6. MAGESTIC -12, JANAP - 146 and ets.

There is a rule in the USA according to which all documents having the signature stamp of secrecy, after a long period of time may be deprived of this stamp and become available. Besides that persons who had the right to work with secret documents, sometimes being pensioners start to write memoirs in which they present some facts having been secret and of the state importance. In any event, a curious document has been published in the American press lately. The duplicate of this document has been presented gently to the chairman of the Moscow commission of abnomal phenomena V.G. Azhazha by his Bulgarian colleagues. Here is a word for word translation of this document /to be more

25

The highest secrecy
Duplicates forbidden
The White House
Washington

September 24 1947.

26

M E M O R A N D U M
to the Minister of Defence.

Dear Minister Forrestal!

According to our recent conversation, You are authorized to use all measures for a quick and careful solution of the problem. In future this subject under discussion must be mentioned only as an Operation Magestic - 12.

It seems to me that later on the control of this subject must be represented only to the Presidential Office with subsequent discussion with You, Doctor Bush and the Director of the Central Intelligence Service.

Garry Truman /signature/

The highest secrecy. Magestic.
Duplicates forbidden

A memorandum: "Operation Magestic - 12" was prepared for a newly elected President Dwight Asenhauer.

November 18 1952.

Warning: this document of the highest secrecy, no duplicates allowed, contains the secret information of paramount importance for the USA security. The number of persons having access to this document is confined to the Group Magestic-12. Copying in any forms, summaries and other notes are forbidden.

Content: the Operation Magestic-12. A Memorandum for a newly-elected President Asenhauer. The document is presented on November 18 1952. The executor of the document: Admiral Rosko H. Hillenketter /MG-1/.

Annotation: This document has been prepared as a preliminary note. It must be regarded as an introductory to the full report under preparation.

The Operation Magestic-12 is an supersecret research and government-intelligence action, being fulfilled only for the President of the USA. The operation is planned and goverened by the Group Magestic-12 /Magik-12/ which was established by President Truman direction on September 24 1947, due to the recommendations of Doctor Venniver Bush and James Forrestal/see supplement A/.

Members of the "Magestic-12" group were nominated:

Admiral Rosko H. Hillenketter
Doctor Venniver Bush
Minister James Forrestal
General Nathan F. Twining
General Hoit S. Wandanberg
Doctor Ditlev Bronk
Doctor Gerome Hanseiker
Mr. Sidney V. Sours
Mr. Gordon Grey
Doctor Donald Mensel
General Robert M. Montegu
Doctor Lloid V. Berkner.

In consequence of the death of Minister Forrestal on May 22

1915, his place in the group was vacant since August 1 1930, and then was occupied by General Walter B. Smit.

On June 24 1947 a pilot of the civilian aviation, making a flight in the region of the Rocky Mountains, saw nine disc-shaped apparatus flying in a line at a very high speed. Though it was not the first fact of observation of objects of the kind, this event gave an impulse for a wide public information. It was followed by hundreds of reports about observations of such objects, a lot of them were received from rather truthful military and civilian saurces.

These reports were analysed independantly by various divisions of Military Forces in oder to find out it's origin in the interests of the state security.

Many eye-witnesses were examined and several unsuccessful attempt to pursue discs with aviation were delivered. The reaction of the population was on the verge of hysterics.

Inspite of the plenty of attempts, the investigation of the phenomenon hadn,t advanced since the information from a native farmer came, that one of the objects had been crashed in one of the far situated regions of New-Mexico state, at about 75 miles to the north-west of the military base Rosewell /now Yorker Feld/. On July 7 1947 a secret operation in order to find and scientifically investigate the fragments of the object was started. During the operation our air reconnaissance found also four anthropoid creatures, which had thrown themselves out from the apparatus before it blew up. They fell down on the ground at approximate distance of 2 miles to the east of the place where the apparatus was found. The all four were dead, mutilated and had decomposed greatly as for a week they had been preys of rodents, beatles and microorganisms.

A special scientific group took these bodies for examinations. /look at supplement "C"/

The fragments of the apparatus were also taken for a complex investigation. /look at supplement "B"/

All military and civilian witnesses signed an obligation not to tell anybody about the event, and the version was spread that the object was a hydro meteorological research ballon having lost control off.

The preliminary secret analysis organized by General Twining and Doctor Bush due to the direct instruction of the President showed /September 19 1947/ that disc resembled a small reconnaissance apparatus most of all. This conclusion was based on the fact that the apparatus had the size of a reconnaissance air-craft and had no reserves on board. /look at supplement "D"/.

A detailed analysis of the four dead members of the crew was made by Doctor Bronk. From the preliminary conclusion of this group it followed though they looked like men, biological and evolving processes of their vital providing differed greatly from those of homo-sapiens.

The group of Doctor Bush introduced a temporary term "out-of-earth biological creature -OBC for calling these creatures somehow, with further possible change of this name on the next stages of researches.

It was presented as unquestionable that the apparatus hadn't been made on the Earth. The main problem under study was the origin of these creatures and the ways of their coming to our planet.

Mars was suggested as a possible base , though some scientists, especially Doctor Mensel considered them to be from another solar system more possible.

Some fragments of their apparatus had marks resembling hieroglyphes. All attempts to decipher these marks were failures. /look at supplement "E"/ and also the attempts to discover the way of it's moving, the principle of their engine operating were failures.

It was considered and modeled all known methods and devices

for moving and towing /wings, propellers, vacuum tubes and etc.
look at supplement "F"/ The situation was complicated by the fact
that the engine of the apparatus was destroyed because of the
explosion which led to a catastrophe.

file force

28

The necessity to have an additional information about this
object, it's technical characteristics and it's purposes was
reflected in the Air Force project called "Sign" in December 1947.

For keeping strictly to the secrecy, connections between
the groups "Sign" and "Magestic" were conducted by two persons in
the intelligence department of the material-technical aviation
office, whose role was restricted to transference of the
typical information according to the established channels. Within
the framework of "Sign" the project "Malice" was founded in
December of 1947. All it's work was conducted under a code "Blue
book" by air-force officers at it's head.

On November 6 1950 the second object probably very similar to
the first crashed to the ground at a very high rate after having
moved to a long trajectory in the atmosphere, observed from the
Earth. It was at Al Indio-Guerrero in the region of Texas-Mexico
border.

Immediately a trench-raid was sent to the place which found
only the fragments of the nearly completely burnt out apparatus.
The specimens of the materials were urgently conveyed to Sandia,
state New-Mexico.

It is important to the National Security that the motives and
purposes of these visits continue to be unknown. Besides that,
due to the observations, the activity of these objects began in
May and continues during the autumn of this year and it is
expected the future development of these events.

Recognizing these reasons, the international and technological
importance of this problem, and the necessity to avoid panic among
the population on all levels, the group "Magestic" expresses it's
opinion, that precautions for keeping the secrecy of this
information must be taken without initiating the new
administration into it.

* *
*

In the book of the above mentioned Stringfield "Syndrome of
UFO wrecks", published in 1980, it was marked that 28 UFOs'
catastrophes were registered in the world lately, from which 12
took place on the USA territory and 16 in other countries.

In March 1950 all american press published articles about the
flight of more than 500 disc-shaped UFOs above the nuclear
enterprises in New-Mexico /Adolf Shneider book "Visitors from the
Universe", 1976/.

From the mentioned book and also from the books: Fauler "UFO-
alien planet visitors", 1976; Burre "UFO: the army talks", 1979/
the following information became public. In September 1951 The
Committee of Staff Commandors /the highest military body in the
USA/ issued secret directions "JANAP-146" about measures to avert
the armed aggression against the USA, which ordered to inform
immediately about the appearance of unknown strategic means,
including UFO, by the military informational channels. In a case
a military man divulged this information by radio or TV he was to
be imprisoned for 10 years and fined for 10 thousand dollars.

A whole serial of UFO flights above Washington in July-August
of 1952 aroused the formation of the negative attitude towards UFO
from the official circles of the USA. During these months UFOs
appeared above the american capital 7 times, flying above it and
going away quickly when pursuit planes appeared, and then
returned again. The greatest air raid happened on the night of
August 13, when on the whole 68 objects appeared above the city /
the book of Frank Edwards "Flying saucers - serious matter", 1966/

These flights caused great anxiety not only in public, but in the highest government and military circles of the USA, which concerned these UFOs to be dangerous to the national security and took precautionary measures. One of these measures was a secret task to the Institute of applied sciences after Bettel to conduct a deep analysis of all information about UFO from 1947 to 1952. The results of these investigations were presented in a secret report "Report N 14", the workers of "Blue book" were forbidden to cite /Allen Hainek's book "Hainek's report on UFO", 1977/.

In September of 1952 the department of scientific intelligence of the CIS prepared a secret memorandum, which stressed the necessity of organizing a global system of information collecting about UFO from all over the world in order to stude this phenomenon seriously. To all this it was pointed out that Air Defence Forces could have instructions to intercept UFOs. One of the task was to find out, how seriously the Soviet scientists worked on the problem and why data about UFO was hushed up in the Soviet press, and also took measures of desinformation in order to compromise the UFO problem in the USSR /the second memorandum of...1980/.

In January of 1953 the CIS gathered in Washington the so-called "Robertson's Commission" which besides Director Robertson, who was a secret CIS worker, included also four scientists connected with military industry, and some generals of ADF and representatives of the CIS /Jacob's book "Polemics about UFO in the USA", 1975/ In the seventies the minutes of these meetings were opened and it was known that the Director of CIS Allen Dallas was present at them. The concluding report of the Commission, prepared to the CIS directions was aimed at forming the governmental policy in the question of UFO on all levels including the President. Some recommendations were given in the report to abort free access of civilian people to the UFO information, obtained by ADF, to conceal the reality of UFO existance from the population and affirm that all UFO observations could be explained by usual reasons in order to lessen the interest to the problem in the USA and other countries.

In March 1954 the directions "JANAP-146 was issued again with an index /c/. At that time it was pointed out in it that data about all unknown objects, including UFOs were to be passed as the information of paramount importance. To all this it was underlined that all the information of the kind was connected with the national security and divulging of this information in any way was forbidden and would inflict penalty according to a law of espionage. After issueing of the directions pilots of civilian aviation were also forbidden to divulge the information about UFOs /Fauler "UFO- alien planet visitors", 1976/.

In March 1966 the Committee of the Staff Commanders issued the fifth variant of "JANAP" directions with an index /e/, in which it was pointed out that UFOs were to be considered as hostile objectives.

The ADF Staff issued a number of secret documents dealing especially with UFOs. The first of them was a secret instruction AFR N 200-2 written on August 26 1953 under which all researches of UFO would be conducted in three organizations:

- intelligence office of ADF in Pentagon;
- airsquadron 4602 of scientific protection which had it's representatives in all aviabases;
- scientific-research centre of ADF at the base in Rite Patterson.

Even the highest officers of ADF were not allowed to get the information about UFO and sound the results of the first stage of investigations.

Fragments of "flying saucers" or details which could belong to them, and pictures of radar screens showing the manoeuvres and rate of UFOs, and original pictures of saucers were to be sent

immediately to the scientific research center of ADF /Oagencal
- UFOs - out-of-earth space-crafts", 1976/.

In August of 1954 the instruction AFR 200-2 was issued again.

In September of 1959 the instruction AFR 200-2 was issued for the third time under the title "Operations and actions of UFO - serious matter". It was mentioned again in it that ADF were interested in the problem from the point of view of it's danger to the USA security and as a possible way of futher widening of their scientific and technical knowledge.

30

4. CONCLUSION

During the fulfilment of the first stage of the researches of the theme "Thread-3 the following main results have been obtained:

1. The scientifically-based conception of the researches of the theme for the period from 1991 to 1995 has been formulated.

While working out the conception of the work the continuity of the researches of abnormal aerospace phenomena in the unterplay with the condition of helio-geophysical activity and technical factor conducted earlier has been maintained. Together with this the main attention is paid to the reduction of the arears of scientific work in comparison with foreign countries researches of abnormal aerospace phenomena and to the development of the new directions of researches based on the theoretical-experimental researches of various versions of AAP, NPA under laboratory conditions with application of methods of mathematical and physical modeling in order to find out the possibility of use of separate AAP features for the improvement of the technology of new types of armament manufacturing and for the search of new principles of movement in the atmosphere and vacuum.

The main parts of the resarch conception are general scientific, methodical and organizational principles of investigations of aerospace phenomena defied explanation from the position of modern sciences. Among these principles are of the most importance the principles of estimation of trustworthiness of information and principles of reasonable treatment of researches according to which only after exhausting all physical laws of coservation we can resort carefully to the formulation of new scientific statements, new axioms and principles.

2. The new lines in investigations of the theme have been determined:

the research of the possible origin and mechanisms of processing of AAP and their influence on the work of various technical devices;

the research of the nature of the processes of functioning of non-traditional propelling agents and teir interaction with environment;

the research of the possible nature of formated radiation and functional physical fields and their interaction with environment;

the research of AAP, NPA, FR and FPF interaction with biological objects and working out of necessary precautionary means.

3. The co-operative of organizations-executors of the programme "Thread-3" has been made:

M/u 67947 has been defined as a head-executor of the first direction of the work, it's co-executors are: m/u 03444, AFA after Y. A. Gagarin, Irkutsk HMAIC, the Institute of Radiotechnique and Electronics of the AS of the USSR, the Institute of Atmosphere Physics of AS, the Institute of ecological analysis problems and renascence at the Academy of creation;

as far as the second direction is concerned, as it's head executor the Centre of science-technical investigations and introduction of the AS has been defined, it's co-executors are: the Institute of sinenergetics of MSU, SIU "Red Star", the Institute of Atomic Energy after I. V. Kurchatov, CDEB of the Ministry of atomenergetics industries of the USSR, SCC "Rino" of the AS, the Central Institute of economy, information and control systems of the Ministry of Defence of the USSR;

the Research-scientific Institute of Heating Processes has been defined as the head executor of the third direction;

the MSIE "Druzhina" has been defined as the head executor of

the forth direction.
For the estimation of the trustworthiness of the information from foreign editions dealing with all lines of researches ASRI of Complex Problems of SCST and AS has been defined.

4. The main principles of working out and analyzing of obtained information and identification of abnormal aerospace phenomena, and also their classification due to the formed ideas about their physical origin have been elaborated. With regard to these principles all AAP are divided into classes:

natural, technical, non-identified.

5. The estimation of the published data of Sarl's machine which can be considered as a manufactured UFO has been made. But the given data doesn't permit to explain the physical principle of Sarl's effect, it's constructive peculiarities and the interplay of the elements of the described machine. For realizing the scale of the phenomena on the first stage it was given the utmost statistical estimation of physical fields /within the framework of conservation laws/ which have good chances to lead to the levitation of Sarl's machine, the first results of this work are presented in Supplements.

For the explanations of the processes of the Sarl's machine functioning, it was suggested to consider non-traditional ways of it's levitation /through the interaction of electro-magnetic and stationary fields of acceleration with space-time curve, the use of gravitational waves forming marked "channels" in space.

The inspection of constructive and technological aspects of Sarl's machine permits to make a conclusion:

on the basis of the existed materials constructions with high revolutions can be manufactured;

at present we have a number of strong and firm magnetic alloys which can be used for primary experiments.

For the further conduction of the investigations of Sarl's effect and machine, it has been based the list of experimental models, the most important of which is electro-dynamic model and magnetic model. The description of working places and equipment necessary for the experiment are presented.

6. It has been made the analysis and prognosis of the development of experimental and technical investigations in a new sphere of science and rotator gravitation. It has been shown that there is a gap in our knowledge of gravitation, especially of gravidynamic interactions, rotary gravitation, space curve, common vacuum theory. It has been justified that on the first stage it is necessary to test experimentally first of all the effect of mass changing of all rotating bodies, quantum and resonance effects of rotary gravitation and the possible gravitational connection between rotating objects.

7. The analysis of the information of formed radiation and functional physical fields has been conducted. It has been noted that at present the nature of FR and FPF hasn't been found out, and the work of the technical installations generating these radiations and fields has not been justified scientifically. It has been extended only the subjective feature of FR and FPF and some constructive peculiarities of instrumentation for generation, concentration and application of FR and FPF.

The "microlepton theory" of A.F. Ochatrin has come under doubt. The installations for conducting experiments dealing with the effect of magnetic and other physical fields on biosystems have been made. The method of the tackling the problem dealt with precautionary means and the programme of working out these precautionary means has been elaborated.

9. The analysis of the information on foreign experience in the investigations of the problems of abnormal phenomena and their interaction with environment. It is shown that these investigations are connected with the attempts of the scientists abroad /USA, France/ to find out new forms of energy, new principles of transference in space and vacuum and to create new

types of armament. Many conceptions under study are working out on the instructions of Ministries of Defence of countries- NATO members.

33

Here is a copy of an official report on UFO- flight over the city of Naltchik (South of Russia)

THE INFORMATION

on the investigation and analysis of the trajectory of the flight and the shape of UFO which flied over the territory of Kabardino-Balkarian Republic of the USSR, on the 13th of February 1989.

34

1. The facts of UFO appearance above the city of Nalchik.

On the 13th of February at 20 o'clock Popov Maxim, a schoolboy of the school n.4 and Muftiev Denis, a schoolboy of the school n.30 noticed some phenomena in the region of the Shalushka river. The place where Popov M. stood is drawn in the pic.1. He was standing with his friends when their attention was attracted by a large red object situated high above the city. It was noticed that the object was moving and losing height. Then not changing the shape and the direction of its movement, the object changed its colour into red during several seconds. After having changed its colour the object went to six drops of the same green colour situated on one horizontal line, with equal intervals between them. The whole process took 10 minutes. After this period of time, they changed their colour into red and merged all together in one red circle. After that the object passed out of sight.

The analogous phenomenon and at the same time was observed by Muftiev Denis, and some minutes later by Chechenov Murat, a schoolboy of the school number 9.who was near the Republican Palace of pioneers.

Then at about 21.30-22.00 an UFO appeared above the city. It was observed by several hundred of citizens according to preliminary data. The trajectory of its flight and its shape (general look) is given in the picture 2 and 3.

According to the analysis to the witnesses descriptions the trajectory of the UFO flight above Nalchik was defined and it was made a draft of it.

As it was described by the witnesses the object was about 150 metres long and about 40 metres across. There were about 8 windows of rectangular shape, the size of which diminished to the tail part. It was a not very long light following it. The windows (if they were windows) illuminated brightly, in the front part there were two scanning projectors. The front part was slightly inclined. There were no distinct descriptions of the tail part. It flied noiselessly at a speed of 100 km per hour, at a height of 100 m. above the earth.

The object entered the city from the village Kenzhe, then flied above Golovko street, turned to Lenin prospect, flied along the railway from Alexandrovka to Nartan, turned back, flied above the airport, then between Strelka and Kenzhe, and turned in the direction of the town of Baksan. According to the witnesses words the object flied in the direction of Baksan losing height, it was supposed that it could have landed in the region of Kenzhe-Kamenka. In order to prove this version the region of the possible landing was examined by the car on the 15th and by the helicopter on the 16th. On the 24th it was also made a radioactive examination of the streets above which the object flied. The radio-activity along the trajectory of the flight wasn't higher the usual level.

After the object went away from the city, another one appeared. It was smaller, more mobile and manoeuvring. It was seen at about 24 o'clock in the region Molodizhnuy. It flied low above

houses noiselessly, but disappeared quickly from the sight. It consisted of two round parts connected by a bridge. The both two parts illuminated, there were windows in the front part.

35

Here is a clip from othanother official MOD document written in 1988

CONCLUSION

1. The analysis and generalization of the existing to the beginning of this work facts of abnomal atmosphere and space phenomena has proved that the problem of their investigation attracts attention of the general public, scientists, military specialists and represents a subject of discussions and publications

36

2. The investigations conducted in m/t 67947 were the first attempt to identify on the scientific basis the observed phenomena with aeronautic objects flights, artificial cloud formations, flights and tests of rocket-space objects and other technical equipment, manifestation of known natural phenomena or their mutual influences. This intercommunication has been exposed on the basis of the researches of more then 700 cases of reliable information on abnomal phenomena observed by eye-witnesses in the period from June 1978 to the 1 of July 1983.

3. The distinctive features of abnomal phenomena peculiar to different regions of the country, including the regions where science-technical experiments and tests of special programmes had taken place, were exposed.

4. According to the witnesses' reports it can be established the fact of rocket launchings and also their time and number. At more precise instrumental observations of the process of examined phenomena development or it's separate fragments it's possible to establish the type of rocket fuel (solid or liquid), the number of stages, the period of their work, the material composition of the nozzle of the rocket engine and other characteristics of the engine installation, because such features as intensity and time of luminescence, the structure of it are determined by the technical characteristics of the engine installations.

Purposeful collection and research of such information gives the possibility, according to some observed effects, to judge of the character and content of techical models, which allows a probable enemy, to use this information for intelligence.

5. In the arrangements for foreign technical intelligence counteraction in the time of armament tests and important science-technical experiments the attendant effects manifestation must be taken into consideration. The correct choice of the time and atmosphere conditions can promote secretiveness of the tests of especially important armament specimen or reinforcement of the specific effects which accompany scientific experiments.

6. The continuing attempts to organize wide discussions in the press about possible reasons of the origin and development of observed phenomena under the motto of UFO investigations can favour the flowing off of very important information. In connection with this the search and examination of the reports on abnomal phenomena in atmosphere and space and also nonqualified explanation of them by public organizations and individuals-enthusiasts is undesirable.

At the same time, the scientific explanation of new phenomena and effects in scientific-technical and other special editions will help to dethrone the myth about existing permanent danger and threat of UFO.

In the most of researched cases the reason of appearance and development of phenomena are explained within the limits of known effects or connected with scientific-technical experiments or tests of technical equipment, some atmosphere processes and their mutual influence (interference).

7. On the whole the problem is worth futher research and closely connected with the problems of the Earth atmosphere and

around air space investigations. In particular, the investigations of the nature and property of abnormal phenomena is necessary for extending our knowledge of air and space means functioning in order to ensure the safety of their flights.

8. The experience in identification of abnormal phenomena and based on science methods of the research of their nature and origin allow to narrow considerably the circle of phenomena subject to study and to determine the aims and tasks of the further investigations.

The results of the identification of the above-mentioned phenomena elicited a fact of other similar processes and effects which can't be identified because of the lack of complementary data about scientific-technical experiments and test of technical equipment in different regions of the country and the impossibility to achieve effective information about observed during the tests atmosphere and space phenomena. The process of appearance and development of such phenomena can also be connected with different geophysical processes and other unknown effects or their mutual influence.

The results of further investigations will find their reflection in the future editions of the Information materials.

file disc

I have already mentioned provokative questions that Malishev was asked. Here is one of them: "Tolya, when you asked them questions, did they understand you immediately?" The answer: "Lev Evgenievich, often I hardly had time to ask a question, only to think about it, and they already answered." And about such details it was written only in foreign UFO literature, which was difficult to get only if you had good "connections", and it was necessary to translate it.

My personal contact with Malishev has continued for many years and I can characterize him as follows: he has absolutely no fantasy / he pain only from nature or from memory / he is very honest, kind, sympathetic, in a collective he tries to load himself with all difficulties and to make easier the life of others, feels other man's pain as his own, he is ready to defend the just cause with might and main, not talkative, not vain, tongue-tied, infantile.

Kostrikin Viktor Petrovich was born in 1927 near Astrakhan. As it has been mentioned his first contact took place on July 7 1968. Having summarized the information got during his contacts he wrote a considerable and convincing in some places report. He called it "Behind the verge of mystery". The extract from this book are set below:

"Before 1962 I believed UFO very little, until I saw it myself at the summer august night... in the village of Blagoveshenka of Prohladnenski region in Kabardino-Balkaria... UFO was moving by strange zigzag trajectory...

When I was a child my grandmother often told me: "Grandson, look often at the sky and you will see a miracle, something is flying there". UFO was observed as by my grandmother and my mother also... at the night on July 7 1968 I got to the mountain village Khushtosirt of Chegem region, I went up to Alpine meadows. I chose this region because I saw UFO flights here not seldom. I settled on the haycock... It was about 3 a.m. Suddenly I saw a vertically falling meteor of unusual brightness. Then this brightness disappeared and further lifting down continued very near and was accompanied by smoky "waggings"... Silence... I was concentrated. And then, very near to me from a small forest I felt an inspiring fear look. In one moment I left my observation post and ran away... But I was stopped. I was paralysed. I could neither move my leg nor raise my arm... The cold sweat stood out on my face. My heart beat fast, my mind worked. But soon constraint and fear disappeared... I heard somebody calling me and went. Behind a small hillock a huge disk-shaped metallic light coloured apparatus was standing. Along it's perimeter port-holes illuminated. Only when I approached to it I realized that there were not port-holes but round opened outlets of tubes. There were no port-holes as in our notion at all in it. The tubes went inside the apparatus along radius, and outside they illuminated with a specific light of milk tint. This strange light rounded the apparatus in some places. The impression was if the apparatus was in a light cocoon.

I was met by a creature very similar to me: the same legs, the same arms. It was of the same height or a bit higher. His clothes was light, and his head and hands were inlluminating, especially visible outside the apparatus. The figure was very slender with normal proportions, movements were very staid and even sublime. They didn't like loud conversations with much gesticulation. They gave me a sign to enter. I crossed the threshold, where it ended the power of money and any earth power. There was a kingdom of a word and deed there. The absolute superiority.

38

stepped quietly. The light inside was very soft, it was not like electric, more like usual day light. There were not sharp shadows in apartments. The light came from above, I didn't saw the sources of it. I noticed some other figures, five of them. All of them were dressed in similar clothes and were alike as twin brothers... Their heads were large, faces were oval and oblong, attractive and specific /there are not bad pictures made by Kostrikin-L.Ch./. The impression was that when they looked at you they knew even what you thought /remember Malishev's answer-L.Ch. /

They were neither hostile nor especially curious. The most peculiar their eyes were. They were large and wide-set. It seemed that they saw equally everything in front of them and sideways. This wide view frightened very much... I didn't see anybody wearing glasses. They blinked very seldom /read Malishev's report/. There was something of a bird in their eyes and look. Heads were crowned by something made of gold and jewelry /it is not improbable that Kostrikin took something for gold and jewelry-L.Ch./ From behind it looked like a skull-cap, from the front and sides a fore-and-aft cap... they had no decorations, hems and even buttons /it is a characteristic feature mentioned by many people being in contacts-L.Ch. / There were something like folds at the ends of sleeves, trousers and near a neck. Their clothes were white and brilliant. Their shoes were with thick as microcellular soles... They had hair which seemed to be grey, though their faces had no wrinkles and looked very young.

I introduced myself saying that I was a native of the Caucasus and at the same moment I received an answer that only four nationalities were native, and others were strangers or mixed. They enumerated them. They had their own names for these nationalities and only one word sounded as our "svani". They even showed their locations.

They called themselves neither gods nor devils, they only exchange looks to my question which seemed to be irrelevant for them.

In their speech with somebody they used unusual means of communication, when you heard everything as if inside your head /read Malishev's report-L.Ch. /. I tried to stop up my ears with palms and fingers, I turned and bent my head, nevertheless I heard. The direction of the source of sounding was fixed and didn't change when your position changed... Their answers/to the questions/ were clear, accurate, without too many words, in the modern russian language. They were very polite. Their voices were young and differed in timbres. Their emotional condition was felt and apprehended by tones. They liked good humour. Of course they didn't laugh. When they talked with me without opening their lips. So it was a straight language thought strictly oriented by a correspondent... Between themselves they used an unknown language.

I was sitting in an armchair and again my attention was attracted by an original rectangular table above the entrance to another section made of gold and decorated with semi-precious stones... shining dots resembled a starry sky. I asked what it was. "Define yourself". "In my opinion, it is a restrictive instrument or a stop-signal". "It is right. When the largest stars are in this position, very important events will take place in the Universe".

Then two "twins" came up to me. One of them wore black gloves which reached his elbows... his hands were very elegant... The gloves suited him well as if had been made especially for him. There were no wrinkles or foldes on them. It's quality was surprising. There was no polish or specks on them. They were absolutely black. I looked at them with fear and watchfulness. I thought what they were going to do. They took my left hand and turned it with the edge up, unbent my thumb and put an instrument between

a thumb and a forefinger by a gloved hand. It took a moment and a piece of my skin appeared on the instrument.

A red triangle appeared on my hand. I felt no pain, there was no blood on my hand. And at the same time this small wound began to skin over before my eyes... the black gloved hand began to penetrate into my chest. I watched this miraculous deed with my eyes wide opened. There were no obstacles for this glove, no skeleton, no muscles, no clothes. I felt no pain or other unpleasant feelings. Only when the glove was deep enough and touched my heart I uttered a scream with pang. The glove got out. There were no traces or blood at the place of its penetration. It was beyond human understanding!

...I was afraid to ask, how to explain such transformations, but wondered what they needed my skin for. They answered that it was a large source of information. That from the small piece of skin they could make several human figures. That people began to injure their cover, and their organism. That for future generations this cover would not function proper, and their organism would not be up to the requirements. Influences of the environment rose yearly: radioactive, chemical, vibrational, informational which were not seen at the time, would be fatal in future. The date of this future was under their control... They took these probes regularly not only from people all over the world but from animals also. That the large genetic fund was renovating and replenishing constantly...

While visiting our planet they treated everything with care though they were often attacked. They tried to do their best to minimize the number of victims of such meetings.

Then I was sitting in the same arm-chair and remember everything as in a dream. They brought a black rectangular instrument to my eyes. A blue even light began to creep out of the corners of my eyes. Rolling my eyes I could see even light. Then they examined my birth mark, and found another on the forehead, above the bridge of the nose. I never paid attention to it.

I didn't know the purpose of this examination.

I said that they were probably living somewhere not far from us. The answer was approximately like that. Not only in the neighbourhood but far, farer and farer. That there was a large starry inhabited "country", bordering with our Galaxy, that there was a corridor between them, that on their way to us they could replenish reserves of water. That they not only drank water, but it could burn slowly and be a fuel for large space-crafts resembling crystals. That their lives were much longer than ours. Our life was only a minute of their. That all earth civilizations were exposed to catastrophes which was linked to great cycles and rhythms of astronomical character /the same idea was presented in the ancientegypt philosophy of Gerges Trismegistr, which is very difficult to find. Later the idea was presented in many philosophical schools of ancient India. In all contacts when a question about the theory of "Great explosion". or "Pulsating Universe" was asked the answer was synonymous, that it is one of the mankind's delusions. So "astronomical rhythms" mentioned by Kostrikin are not to be identified with "Great explosion"-L. Ch. /

And the development of their civilization was not connected with these factors and was remained owing to the force of knowledge. That we /earth men/ not waiting for great cycles were ready to annihilate everything on the Earth by our large nuclear potential, this fact worried them and attracted their attention, it was a different, unabated control and their reaction would be immediate, with the speed of a thought /?//look at Malishev's story/if it was necessary...

Then Kostrikin regained consciousness in the morning on July 7 at a large distance from the place where he had been. He thought that if he had been even unconscious, he was not able to cross high mountains and rapid rivers and be in dry clothes.

two years have passed since that time. All my attempts to inform scientists about my contact were failure. I only clashed with misunderstanding and ill-will towards me.

At last drawing by a irresistible desire, I again went to my haven near the village of Khyshotosirt on July 7 at 10 p.m. and everything was repeated as it was in the summer of 1968.

"There was nobody near a disc-shaped apparatus...pilots were not inside either. A quiet bewitching music was heard...I came into the craft-nobody. At that moment I saw an entrance to the neighbouring section. I went there...Then I heard a peremptory woman's voice: "There is nobody there"...I was terrified. I turned back and saw an opened book...

The signs in this book were in columns and resembled our stenographic signs. I didn't turn over pages. I started to compare the signs with known objects and animals...I asked what two of them meant and remembered. Open maps of the starry sky were near...I felt distinctly that I was under observation, but saw nobody. A sign which I called a "tobacco pouch" attracted my attention by its originality. I asked pointing to it: "Tell me please, what does this sign mean?" "It is an inhabited part of the Universe". In the text I saw many crosses which were depicted in different ways. I was interested in it and I asked a question about the meaning of these crosses. "These are astronomical symbols...It /astronomical ideogram/contains the number of collisions, intersections of galaxies taking into account commensurability. Then I drew my attention to the sign which I called a "crocodile".

-please, this sign looks like a crocodile, and it resembles something very unpleasant.

- it is a symbol of life and designates two joining galaxies.

-excuse my misunderstanding. But I think that when two galaxies are joining it's a symbol of death, but not a symbol of life.

- it's right but not totally. Galaxies are striving for rapprochement and after large periods of time they join in pairs. Then death, destruction, creation and exchange take place. Then they move away/from each other/. Such is Great Mother Nature...It was, is and will be for ever.

- and that is an explanation for such variety of stars from giants to dwarfs in our galaxy.

- not exactly...

- but when galaxies join it is followed by blows: gravitational, heating... and so on and how can we save a life?

-that's the problem and try to solve it. Imagine that very long ago a life appeared somewhere and started to develop. It has passed all the stages of evolution and reached the highest level of mind...the gained knowledge and experience was shared with descendants.

42

4. Meetings with UFO in around planetary orbits.

In the above mentioned round-table talk in the editorial office of "Komsomolskaya Pravda" M.L. Popovich reported the following "...when American astronaut Armstrong came in the town of Zvezdnyy, I came up to him and said, that I had heard a lot about your meetings with UFO. Tell us please about them. But if you had been warned not to tell us about this, say please immediately. But he answered: "Even if I was suggested a million dollars, I shouldn't deny the fact that I had seen, because it is very interesting and I deal with this. I saw, honestly I saw!" - he said.

Then Marina Leontievna continued: "I have a duplicate of the tape of the report of the space-craft stuff - cosmonauts Kovalenok and Ivanchenko- about UFO. On June 17, 1978 at 0.14 a.m. they were on the second turn around the Earth, Kovalenok reported to the Centre of control something very near to the following: "Here is the information for you to think about. On the right, at an angle of 30 degrees there is an object flying under us"- Silence. The Earth: "Describe the appearance and shape of the object." Kovalenok: "It is something very much like a tennis ball, bright as a flaring up star". Ivanchenko: "It's rate lower than ours". And here is the next extract from M.L. Popovich's report: "On March 24 1978 in "Vechnaya Moskva" in correspondent Zhelesnova's reporting an interview with cosmonauts Romanenko and Grechko was published. The interview is very diffuse. In conformity with our conversation I want to single out the following: During two turns around the Earth they were followed by UFO, and according to cosmonauts' information, the object was much more than any known launched from the Earth object in size(!) The object was as though metallic, as it was scetched by Romanenko, it was glittering in the sun rays."

books: A. Shneider "Visitors from universe", 1976; F. Edwards "Flying saucers - serious matter", 1966-80; J. Berjer and J. Challs "The book of mysteries"/Albin-Mishel Publishing House, Paris, 1975/; Azhazha and N. Shnee "Something about UFO/manuscript/, M. 1980; B. Shurinov "Paradox of the XX centure"/manuscript/, M. , 1980.

Yuri Gagarin at his visit to Iton in England at the reception said the following: "During my flight I saw something more besides everybody knows. It surpasses any imagination, and if I receive a permission to say about this, th whole world will be astonished".

And radio Vienna broadcasted on April 21 1967 the following information: "Cosmonaut Gagarin has reported, that flying saurces are real objects, which fly at a velocity of light. They present a problem of paramount importance, which must be investigated."

The second Soviet cosmonaut German Titov also saw strange luminous objects following his space-craft in outer space.

The fifth Soviet cosmonaut Valerii Bikovsky on June 18, 1963 saw an object which he firstly took for Valentine Tereshkova's "Vostok-6" which was launched two days later after his start. But then he noticed that it was an egg-shaped object. UFO followed Bikovsky's space-craft for rather a long time and then suddenly changed the direction of it's flight.

Even in 1948 while launching the rocket FAU-2 from the firing ground White Mender, a disc flying at the rate of 1800 km/hour apperared near the rocket. It was making circles around the rocket. It was observed with binoculars, telescopes and on radars' screens. Then UFO outran the rocket at 9000 km per hour and disappeared in space. The second similar case took place on April 24 1949.

5. UFOnauts contacts with earth-men.

Above it has been already mentioned the report of M.L. Popovich at the round-table meeting, organized by "Komsomolskaya Pravda" on March 2 1987. And here is the report of another participant of this meeting, scientific worker of the AS USSR Listratov Anatoly Pavlovich:

"A case about which I am going to narrate resembles pure criminal inquest. An anonymous letter was sent to one of the magazines' editirial board in summer of 1979. It read near the following: You are writing fantastic stories about meeting with alien planets' visitors, and we have had such a contact in our town. Then facts, names, offices were presented... This letter fell into my hands... At that time there was a program dealing with the problem(?) in the Academy of Sciences, it's head was... Narimanov Georgy Stepanovich /academician from the Institute of space reseaches -L. Ch. / After a long search I managed to find people having investigated this event, and after 11 monthes I left for this place and learnt all this... I managed to find all eye-witnesses of this phenomenon and to talk with them. We had the authorities of the Academy of Sciences... - two representatives- I and a worker of the Institute of space reseaches... We wre sent to the division... of rocket troops.. We had appropriate documents and the Ministry of Defence rendered us support in conducting investigations. This event took place in a small town of Derzhavinsk /Kazakhstan, Turgai region/ consisting of two parts: an open part and a close military town. As the town was very small the information spread all over the town quickly and was investigated on the level of The Regional Party Committee, and Regional Security Committee...

The essence of the story is as follows: on June 27 1979 a group of pioneers /from the pioneer camp "Berezka"/ went for a walk. They went to the mound "Lisaya"... Suddenly some of the boys noticed a flash not far from the forest's edge on the mound's summit After a short period of time... they noticed some constructions as slate tents on the same edge... and saw a group

of people approaching the edge. First, the boys were as if under hypnosis. They started to cry, waved their hands inviting them to come up... But hypnosis went away quickly, when they saw that people were unusual. They were giants, very thin, slender, black, only their belts were white. The boys were with an educator, who was very much frightened and said "Boys, let's run to the camp!" There were about 20 children 10-14 of age. And strange people were coming up very quickly and surrounding the mound... When the boys ran they heard snapping of twigs from the both sides of the road. When the children ran out in a steppe they saw on one side three figures accompanying them... The boys described these people in different ways, and it was natural. But the main they marked... - thin, 3,5 metres height, features were not seen, only they saw large, pink, shining eyes, very easy step, they went with their arms stretched forward, as if for balance. To all this they stepped as if plunging into the ground... The boys saw them at the nearest distance of 5-6 metres. The boys were not much afraid, but ran as quickly as they could, and the accompanying group lessened in number, firstly there were two of them left, and then the boys were followed by one. When the boys reached the camp, they stopped and their "persuer" stopped too hesitating. The boys grew bolder and started to cry inviting him: "Come, come, be our guest!" But he turned out and went back, glanced back several times, and then disappeared as if dissolved.

And that is not the end of the story. The boys were very much excited and couldn't sleep during quiet hours, they ran to see, what was going on in the steppe. In the evening the second event took place on the territory of the camp. That time it happened with the youngerst group. The children were going from the canteen to their sleeping rooms... on the right side of the path there was a chair. An accordionist accompanying the morning exercises always sat on this chair in the morning... So a girl of about eight was going in advance followed by an educator of this group. Suddenly the girl rushed forward with a wild scream; the educator following her saw "a huge ghost" sitting on the chair turning to her... She also was frightened and took to her heels. Later all elders which were in the camp were collected and started to comb the camp's territory. They found nothing, but one of the boys, an eye-witness to the daytime event, who was on duty that day at the kitchen, said that he was coming back with two pails of water and at the moment saw a giant figure passed him swiftly.

Among material traces we can mark the following: a chair with metallic legs on which the giant sat was half digged in the ground, and soil was very firm there. And as it rained in the morning, it was damp and the imprints of aproximately half meter feet were left on the ground.

All this is approved by documents, reports and tapes... the work was conducted under the leadership of the Regional Party Committee, and Regional and District Security Committees... at the night before the above described event an UFO flight and hang were observed... the boys which contacted, inspite of the fact that 11 monthes had passed were very much excited, I had many talks with them in various situations. They were asked cross-questions and so on... after two days of our arrival rumours were afloated that we were from the KGB and no attention was to be paid to our certificates as workers of the Academy of Sciences. They said not to tell us anything to avoid troubles... The commander of the Staff, who was functioning at the time as a commander of the division told us about some events taking place in the division disposition, also on the same level of fantasy... I have no reasons not to trust eye-witnesses, especially in those cases when eye-witnesses were children... children couldn't tell lies. Could they devise a tale and narrate it together ?.. and also induce their edicator in their "adventurous plan"?

A contact with a provincial boy of 18 Anatoly Malishev /who

Here is a short story of it with stylistic correction.

I was born in 1957 in the region of Fergana, I was about 6-7 when the first "meeting" took place. I walked at the edge of our settlement and suddenly noticed a disc-shaped apparatus at 200 metres distance from me. Three figures in diving-dresses were approaching me, they were of middle height. I was frightened and ran away. Since 1966 I have been living in Solnechnogorsk district of Moscow region, where I had my second contact. Before this event I heard and read nothing about UFO. In my youth I was interested in drawing.

45

On July 21 1975 it rained heavily in the morning, but at about 5 p.m. the weather changed and I went to the forest to draw the sunset. I was very nervous, though there were no reasons for it. I went for about three km. from my house and found a glade, where I settled.

I had never been before to this place. This place was situated about one and a half kilometre from the village Kostino. I was deeply concentrated, the feeling of anxiety grew acute. It was about 8 p.m. I turned back. And I saw at 80 m. from me a silver disc-shaped apparatus. It's diameter was about 13 metres, it's height - 4 meters. It's perimeter was a shining ring. Three human beings came out of it and came up to me. They were in silver diving-dresses; their height was about 1.70 m., they were about 25, two figures of men and one woman. Their faces were very attractive, oblong; their eyes were elongated and differ in colour. They went synchronously, easy, as in a slackened film.

I was not ready to this meeting and naturally the feeling of fear grew sharper. They understood this. The woman stretched out her hand and said smiling with restraint: "Good day. Don't be afraid of us. We have come from another planet. What are you doing?" I answered: "I am making a scetch". They looked at me very attentively, blinking seldom, which made their look more perspicacious. They didn't take their helmets off. I heard the voice of pleasant timbre not clearly /I heard the russian speech not with my ears, but with the back of my head - that the fact that all people being in contacts mention, and Malishev had no idea about it-L.Ch. / I saw their lips moving as if talking. Each of them had either an instrument or a round emblem on the right side of their chest. One of them brought a rectangular instrument to me, an antenna moved out of it. Then he took the instrument away. They suggested me to go into the apparatus. The woman went in advance, the men went after her holding my shoulders. When we reached the disc we were as if pulled into the apparatus. Inside an even light lit up the rows of blinking instruments. Only the central part of the apartment was seen and the rest was in haze. There was a round table and some places for sitting in it. I was suggested to take a sit and undress. I was confused, but began to carry out their request. The woman realized my condition and disappeared in a light haze, as in the screen of a switched off TV set. They fastened detectors to my hands and legs, and put on my head something like a crown. After examining their made a conclusion: very specific /strong/ nerves; mental faculties below the average /Malishev as a very honest and ingenuous man repeated the last estimation word for word - that was one of the evidences of thruthfulness of his words-L.Ch. /

They were surprised at my body. I said that I went infor sports, they asked "What's this?" I : "It's a physical labour".

They showed to me an instrument, which was very like our TV set. There was one of the streets in Solnechnogorsk, which was about 12 km. from this place, in the screen. People and cars - close-up. Then they took me out of the apparatus and returned in it. For 2-3 seconds they lifted an apparatus at one km. height the ring about the disk changed it's colour from blue to bright white apparatus hung and opened in 8 sectors / as orange sections/. Then turned into a cylinder /sausage/. Then returned to it's

previous appearance and landed. They suggested me to fly to their planet. I agreed. It will take 40 min. to fly to our planet and the same to return. The distance is about 3 light years" The author of these lines being aware that the nearest star to us was situated at a distance of 4.3 light years was one of the first among those who interviewed Malishev and asked a question: "Tolya, is their sun alike ours?", anticipating beforehand his exposure. He gave an answer /not word for word/: - "I saw no sun there, the planet was lit up by a garland of highly situated very bright lamps. and also by some illumination from inside".

46

- Upward flight. A porthole opened - the sight of the moving away Earth. We sat in the armchairs the same as in air-crafts. The diving-dresses had been taken off. On the woman's head there was something like a hat. She took it off, she had fluffy light-chestnut coloured hair. After some time they showed to me the Earth from outer space. Our start from the Earth was accompanied with a sound "u-u-u" with the rise of frequency. We were approaching the Moon. In the same porthole, which appeared only during the Cosmos demonstrations, I saw the approaching Moon, some hangar constructions. They explained that those were their stations /look: "Abnormal phenomena on the Moon"/Further we flied as if behind the Moon /according to Malishev's word-around the corner to the left -L.Ch./During the flight I felt very unpleasant which is very difficult to describe in words. They realized that and changed somehow the atmosphere inside, that my unpleasant feelings disappeared. The woman asked with a smile: "Maybe you want to eat?" I answered: "If you have something" They gave me a salad, as a mixture of different vegetables and

our mineral water "Borzhomi". Their food was pure vegetarian. We drew to their planet. We came out. Even white light, the saurce was not seen /besides the above-mentioned lamps/. The air was clean, fresh as in a pine-forest far from cities. It was a bit easier to move there as on our Earth. The covering of the ground was very similar to our concrete. There were some people standing around us. I remember the clothes on two persons: one was in a sport suit and the other in dark trousers and a white shirt. I went accomanied only by one. I had in my memory stone soil, grass very similar to our, there were cupola-shaped and prism-shaped buildings and illumination as if from inside them there. There were "saurces" flying above the surface of the "planet". I saw a flying figure with folded arms.

We found ouselves in a building. While moving along it walls were dispersing. A large hall. A screen 2x2 m. Creatures with dark skin were in it.

It was a conversation between them and one of those present. Their speech resembeled whistle, and sometimes it was like man's speech saying with higher speed.

Further I can only enumerate facts without any links to the surroundings. I saw very near human like creatures 3 metres tall. Round-shouldered, a sullen look, deep-set eyes, a straight nose; a face was a bit lighter then all the rest, their surface consisted of separated vibrating shreds. I felt horror in their presence, but then calmed a little.

They put on their diving-dresses in the following way: they covered themselves with something, and came out already dressed. They undressed as followers: they raised their hands and their suit divided into two parts on the waist level, then the upper part of the suit lifted up and laid down near, then they jumped up and the lower part slid down. They also demonstrated rejuvenation on one of the present: they brought an instrument and a shadow came over the face from up to down.

They also demonstrated rejuvenation on one of the present: they brought an instrument and a shadow came over the face from up to down.

47

I saw how a man arose from a luminous dot: it was spreading in all sides forming a man /by the way, Kostorikin, a man being in contact described the similar appearing of a being. Kostorikin lives in Nalchik, he had his first contact on July 7 1968. It has been stated that these two people knew nothing about each other-L. Ch. /

A man disappeared very quickly. They showed the process in stages: 1/ a man 2/ illuminating contour and inside a dark silhouette 3/ a dark silhouette 4/ a luminous dot /that the way how the woman disappeared, when Malishev was going to undress. In one of his pictures Malishev described the stages of a man's disappearance/.

He saw also a book. He saw an animal very much like an elk. He saw something very like a tape recorder: a triangle prism and a disk. Our broadcasts were recorded on it. They also showed pictures of our earth towns, air and space crafts. He saw creatures of 1 m. height: elongated arms, greenish faces. /such details about hypothetical biorobots were not known at that time, and Malishev described, he had only middle education, practically never left his village and read books very seldom as his parents said, all his spare time he drew-L. Ch. /

He was introduced to a man, who had lived in Moscow for about 20 years in 30-40 th. From the conversation with him I understood that the man knew Moscow very well.

I tried to take a liquid parallelepiped, as a material evidence of being in this space craft. Not turning back /a stranger was standing with his back to Malishev/ordered to put it in it's place. They suggested him to stay with them for ever, he refused.

They said, that wouldn't allow thermo-nuclear war on the Earth, and in the extreme case, they would "blockade" all electric

chains on military objects so nobody would understand what the matter was /remember the most immense energetic damage, which spread from New-York to Mein on the north-east of the USA with the population of 30 million people on November 9 1965 and lasted for several hours, until a huge UFO hanging above an electro-transmission line went away, recall many cases of stops of engines in cars and air-crafts and block of electricity in electric circuits-L. Ch. /

They said that for earth-men there would be "a great holiday" soon. It would be a period of mass contacts of our civilizations.

At parting; "Wait! Everything you have learned, you must tell people, who are interested in it and who will believe you."

Their start from the Earth again was accompanied with a sound "u-u-u"

I stood at the same glade. It was about 11 p. m. I came home and wrote down /unfortunately, very briefly/ everything that had happened, and made some sketches from memory.

Evidences of truthfulness of Malishev's contact.

Some evidences have already been presented in the story, and here are additional.

As soon as Malishev was "discovered" by a group of Moscow UFOlogists, the representatives of this group were sent to him,

among them were very well-known extrasensors B. Ivanov and N. Nosov. They / to the surprise of the group and to Malishev in first turn, who came in the "tail" of the group/brought the group exactly to the landing place, and exactly pointed to all three landing places. Further specialists in dowsing confirmed these places.

Malishev was hypnotized and in the presence of witnesses he not only confirmed, what he told before but added some interesting details which he couldn't recollect before. His hypothetical sleep was so deep that the hypnotizer had to cry questions

48

several times. For example: "Tolya! Why don't they start mass contacts now?" scarcely noticed movement of the lips and hardly heard answer: "They are waiting..." Hypnotizer: "What are they waiting for? Tolya! What are they waiting for?" Malishev: "I don't know."

One of Moscow UFologists was several times at the place of this contact, and also examined the surroundings. Once he was in a military unit dislocated not far from the place. He was told that one of military men of this unit had also have a contact not long before, and flights of "saurces" were observed in these places very often. The author of these lines - a specialist in aviation, spent several nights at a bonfire specially on the "Malishev's glade" and observed UFO twice: the first flight was low above the forest by a sinusoidal trajectory and another time it was a hanging of a bright-blue UFO at 850 m. distance.

file ussr

7. The forty year period of UFO researches in the USSR.

At the end of the 40th and the beginning of the 50th I.V. Stalin having been informed about the home and abroad statistics of UFO appearances, entrusted S.P. Korolev to deal with these data, as Korolev was charged with other important "missions" at the time and knowing that these UFOs might get him into trouble, he managed to refuse... And the problem hung poised in mid air... near hanging "saucers".

Some enthusiasts such as A.P. Kazantzev,, Y. V. Roszius, V. V. Rubzov, A. A. Tikhonov, P. A. Stolyarov, F. Y. Zegel became interested in the problem.

Especially I want to speak well of the late Felix Yurievich Zegel. He was an astronomer by his education and started to investigate UFO in 1955 and continued his work surrendering himself wholly to it till the last days of his life /December 20 1988/.

F. Y. Zegel devoted about 10 manuscripts to this problem, organized public collectives of investigators, took part in all seminars^L conferences dedicated to the UFO problem. He delivered lectures, investigated the UFO landing places and other material evidence, corresponded with leading UFOlogists all over the world and leaders of public UFO organizations, he received publications dealing with UFO from abroad, he addressed to all instances trying to prove the reality and paramount importance of the problem. It is hard to enumerate all his services. Felix Yurievich had much difficulties in his work and overcame many obstacles. They also tried to threaten him. He was an author or co-author of the first serious articles about UFO in this country. in the magazines "Smena" n 7, 1967, "Youth Technique" n 8, 1967, "Baikal" n 4 and "Vokrug sveta" n 1, 1968.

He and Major-General P. A. Stolyarov had an opportunity to take part in a TV program on November 10 1967. Thousands of people responded to this program. To the special p/b letters, pictures and drawings made by observers were sent to them.

People separated by long distances, people of various ages and professions wrote about one and the same. The most valuable were the letters and even radiograms from crews of air-crafts, naval depots, members of geological detachments and constructing brigades. All these documents were in the basis of the first three manuscripts of Zegel "UFO observations in the Soviet Union".

It was also some reports about mass UFO observations during the Patriotic War.

The reports from the civilian pilots about their UFO observations during their regular flights were to be sent in the State Scientific Research Institute of Civilian Aviation. Many telegrams were received by the General Control of Hydrometeoservice of the USSR. Some information was also received by the Astrosociet of the Academy of Sciences. But every chief took care of his post and concealed this information in their safes.

Since 1956 Y. A. Fomin, a teacher of the automation department of the Moscow Institute of Food Industries, began to systematize foreign information of UFO and collect data about UFO observations in the USSR. In 1959 B. V. Makarov and V. M. Gulikov, engineers from one of the secret enterprises joined Fomin. In 1959-60 they delivered first lectures and made reports on UFO problems.

In these years the Moscow Planetarium /in particular/ showed their negative attitude towards the UFO problem. To the plenty of letters that were addressed to the Planetarium about UFO observations, answers were printed on standard forms which read

49

Dear comrade...

The phenomenon you have observed is seemed to be connected with experiments conducting for the density of the atmosphere to be measured at great altitudes, with launching of a sodium cloud /the same which were formed at space-crafts flights/.

50

Scientific consultant
of the Moscow Planatarium

V. A. Bronshtein

The first knock-out was delivered by an article "Myth of flying saurces" in "Pravda" on January 8 1961, which expressed Academician L. A. Arzimovich's opinion and ensured our hopeless lag behind the US in this very important sphere.

This article initiated persecutions and malisious attacks against everyone who tried to defend the problem in the press. Y. A. Fomin was the first to be persecuted.

But UFOs and aliens didn't obey the orders and instructions, and the problem continued to exist in the USSR.

On April 13 1967 Academician Konstantinov addresses Civilian Aviation Minister E. F. Loginov with a request to give him data about civilian pilots' observations of UFO for his book "Inhabited Cosmos. In September 1967 such materials were presented to him /letter n 25/3-36, September 5, 1967, which was sent by Vice-Minister L. Zholudev to Academician Konstantinov/.

On May 17, 1967 the meeting of the initiative group of UFO investigators took place in the Central House of Aviation and Space Researches /there were 45 persons at the meeting/. Major-General P. A. Stolyarov was elected a leader of this group, and the Assistant-Professor F. Y. Zegel as his deputy.

In October 1967 it was determined to found the Department of UFO in the All-Union Committee of Space Researches of DOSAAF in accordance with the decision of the director of the Central House of Aviation, Major-General L. D. Reino.

On October 18, 1967 the first meeting of this Department took place in the Central House of Aviation, about 350 persons were present at it, including the representatives of Radio, TV and the press. The Department consisted of 208 persons. The Bureau was elected with Major-General at it's head, the department was divided into sections, the preliminary plan of the work of the Department was laid down.

At the end of November, 1967, the DOSAAF Central Commettee under the head of Army General A. L. Getman adopted a conclusion to disband the UFO Department. It was a second blow against the problem of the State level. And at the end of 1967 it was a third blow. On the initiative of Academicion L. A. Arzimovich the headed by him Department of General and Applied Physics of the Academy of Sciences passed a resolution denouncing UFO researches in the USSR /"Pravda", February 29, 1968 - "Flying saucers again"/.

On February 15, 1968 it was a creative discussion about UFO problems in the Central House of Jornalists.

On February 16, 1968 thirteen leading designers and engineers - members of the Innitiative Group addressed a letter to the Chairman of the Soviet of Ministers of the USSR A. N. Kosigin, in which they proved the scientific and strategic importance of the UFO problems, reasoned into the reality and global character of UFOs. But the late Kosigin of course learnt nothing about the letter addressed to him as about many other letters.

The answer was received on March 11 1968 signed by Academician A. Shukin. Every sentence in this letter was a lie.

The aollection "Inhabited Cosmos" had been preparing 10 years for the publication. 32 "seditious" articles of the most outstanding Soviet and foreign scientists were removed, and only 37 "sterile" articles were left. And in 1972 the collection "Inhabited

cosmos was published with the content suitable for Academician Arzimovich and his colleagues, and in this form it would be better called "Non-inhabited Cosmos".

At the end of 1974 the "Program of the investigations of communications with out-of-earth civilizations" was prepared by the Scientific Soviet of Radioastronomy of the Academy of Sciences and published in the Astronomical Magazine, volume 51, 5 1974, p.1125-1132. It is a point in this document: "Special attention should be paid to the possibility of finding of the probes of out-of-earth civilizations in our solar system and even on the orbit around the Earth. For seeking of these quickly transferring objects the system of constant control of the whole sky must be supplemented with special radio direction finding. On the first stage it is possible to use the existed complexes of space communications and radio direction finding".

However, with the rise of the number of UFO observations the number of articles defaming the UFO problem also rose, but not in "Pravda" this time, but in other editions, and serious, truthful articles were a rare phenomenon.

On October 29, 1976 at the meeting of the Rector department of MAI it was adopted a decision to organize a Scientific-Technical Soviet of UFO problems and candidate-members to this Soviet were named. But on November 28 1976 "Komsomolskaya Pravda" published an article under the headline: "The technology of a myth /about flying saucers, aliens and other miracles/". The author of this material was Eremei Iudovich Parnov.

In December, 1976 Assistant-Professor R.G.Varlaamov, a worker of the State Committee on Science and Technique of the Soviet of Ministers of the USSR addressed to A.N.Kosigin with a suggestion to organize scientific study of UFO in the USSR. The letter was forwarded to the Expert Commission of the Department of General Physics and Astronomy of the Academy of Sciences. The answer received by Varlaamov is worth to be cited, as it is a typical example of the attitude of official scientists to all new.: "Your materials have been sent to the Department of General Physics and astronomy of the Academy of Sciences of the USSR for an attentive study. We inform you, that already in 1961 the Bureau of the Department noted the following:

The articles about the so-called "flying saucers" have been published in the Soviet press lately, it was implicated in these articles various lighting objects, which are presented as unknown to the science things or space-crafts launched from othep worlds. These fantasies have no scientific ground, and observed phenomena have well-known nature. In connection to this question the Bureau of the Department of General Physics and astronomy has resolved:

1. To strengthen the explanatory work in connection with this propaganda of "flying saucers".
2. To condemn this unhealthy sensations bearing the features of charlatanism and leading wide public circles astray.
3. to appeal to all members of the Department and Institute to fight against this "unhealthy"sensation.
4. To publish an open letter on the behalf of the department unmasking fantasies connected with "flying saucers"

Charge BAGO with this letter.
March 10, 1977

An expert group.

But on September 20, 1977 at 4 a.m. one of the most wonderful UFOs appeared above Petrazovodsk and during 12 minutes demonstrate it's fantastic abilities and metamorphosis. The CK of the CPSU "Socialist Industry" wrote on September 23: "...in a dark sky a large star suddenly flashed sending shafts of light to the Earth. This star was slowly woving to Petrozavodsk and sprawled above it as a medusa, hang sending plenty of the thinnest rays, which looked like a heavy rain... The Director of Petrozavodsk

51

...correspondent, that the workers of his service have never seen anything similar before. Gromov also underlined that they were aware that no technical experiment were conducted in their region at the time..."
file night

52

There were articles about this phenomenon in other newspapers also, in particular in "Izvestiya". Then other reports about strange phenomena at that night were forthcoming from other parts of the Soviet Union and from abroad. F.Y. Zegel wrote in those days: "Strange phenomena in the sky on September 20 1977 were observed on a large territory from Helsinki to Petrozavodsk and from Pscov to Murmansk... abnormal phenomena were observed from 3 a.m. and till dawn". Later Zegel estimated that the whole number of objects observed at that night was above 20.

At the same period of time the following document was adopted.

R E S O L U T I O N

of the Presidium of the Moscow city Board
of STSREC after A. S. Popov.

Minute n 26.

July 17 1979.

On the approval of the membership of the bureau of the section "The nearest search of out-of-earth civilizations with the help of radio-electronic means", on the organization of the section and laboratory.

1. To approve Azhazha Vladimir Georgievich as a chairman of the section.

To approve candidate of physical and mathematical science Gimdilis Leo Mironovich as a vice-chairman of the section.

scientific secretary - Shnee Nikita Alexandrovich.

2. To approve the membership of the bureau of the section.

3. To approve the proposition of the section...

4. To approve the proposition about the laboratory...

5. To adopt the plan of the section work for 1980.

Chairman of the Moscow Board
doctor of technical sciences
professor

S. D. Novakovski

Scientific Secretary of the Board L. E. Tkach.

Members of the Bureau.

Baranulko Viktor Andreevich - a candidate of technical sciences, chairman of the section "The propagation of radio waves".

Volkov Anatoly Vsevoldovich - a commander of m/u 32517.

Golovanov Yaroslav Kirillovich - a scientific reviewer of the newspaper "Komsomolskaya Pravda"

Krilov Michil Michilovich - a vice-admiral, commander of signal service of MNF.

Kunizin Georgii Ivanovich - a doctor of philosophical sciences MIPhI.

Nazarov Yury Georgievich - a vice-chairman of the Centre of Flights Control.

Naumov Edward Konstantinovich - a nonofficial member of the International Association of Psychotronics.
Pavlov-Rezakov Georgy Georgievich - a director of the section in "NIIDAR"
Roszius Yury Vladimirovich - a scientific worker of "NIAP"
— Khrunov Evgeny Vasilievich - a c. t. s., cosmonaut.
Chulkov Lev Evgenievich - a c. t. s., head teacher IPK
Shurinov Boris Appolonovich - a teacher of MSPIFL after Moris Torez.

53

The activity of this section continued a bit longer than a year. During this period of time either one or another member of the Bureau /including the chairman of the Bureau/ was invited to special bodies and had "educational talks" there. They were suggested to stop their work in the Bureau, some special directions were sent to the offices where the members of the Bureau worked. And at last on August 5 1984 the newspaper "Socialist Industry" opened a new era in UFO problem study in the USSR. The article "Mysteries of heavenly phenomena" started with the words: "The Committee of VSENTO dealing with the problems of environmental protection has organized a Commission on abnomal phenomena. The organization of this Commission is caused by the desire to attract wide public and scientific circles to the investigations of phenomena and effects observed in nature, which haven't had scientific explanations yet, including the so-called UFO.

Why have been decided to attract public attention to the problem? What is the complicity of the problem? What are the ways of solving it? To these and other questions of our special correspondent Chairman, Associate Member of the AS of the USSR V. Troizky and Vice-Chairman, twice Hero of the Soviet Union, Cosmonaut, Major-General P. Popovich, Associate Member of the AS of the USSR N. Zheltukhin, Academician of the AS of the UKSSR G. Pisarenko..."

Within the framework of this though public but nevertheless state Comomission groups, sections and even commissions on UFO investigations were founded in various cities of our country. There are about 30 such groups in our country now, though the All _union Commission was reorganized in the SNIO Committee in 1989. According to non-official data about 30000 observationers' reports have been addressed to post box n 664 for the last 5 years. They were to be sent to the All-Union Commission but really all this information has got in the hand of two persons Petukhova and Flaminsky. The mentioned persons deal with the information without any control. The All-Union Commission doesn't exist and information continues to come in post-box n 664?!

Writing about UFO problem in the USSR one cannot help mentioning a case described in the newspaper "Trud" on January 30, 1985, in the article "Exactly at 4.10 a.m..." The article read, that the passenger air-craft "TU-134A", regular cruise n 8352 was followed by a UFO, which had in the crew's opinion, a light outline as large as the Pskov lake. The UFO accompanied the air-craft to it's landing in . The object was fixed by locators. Another "TU-134" from Leningrad flied to meet the above mentioned. The crew of the latter was informed that there was an interesting "tandem" was coming to meet them. When the head pilot of the Leningrad "TU' Gozeridze saw the "tandem" he made up his ming to fly as near to it as he could to have a good look at this UFO. This decision costed him his life. A scanning ray was directed at the air-craft from the UFO which wounded Gozeridze heavily and also hurted second pilot Kabachnikov. Gozeridze was taken to hospital and died there from an illness similar to myeloma or blebby popyeloma. Kabachnikov had analogues illness features and became an invalid of the second stage /this fact is documented by medical certificates/.

The American press copied this article word for word and gave

its comments, that before Geneva talks on disarmament the governments of the USSR and USA tested the newest armaments.

Soon according to the highest directives the author of the article, special correspondent of the newspaper "Trud" V. Vistrukhin was dismissed from his work, and after a short period the main editor of the newspaper "Trud" was also dismissed.

So these are "our achievements" in the investigations of the most important problem confronting the whole mankind, the solution of which defines the fortune of our civilization.

54

file radar

Radars keep an eye on UFOs.

Supplement 1.

The information about UFOs which were registered by radiolocators and confirmed by visual or with the help of optical devices are of especial significance.

Professor Obert writes: "Due to radars' data, values of speed of some UFO are about 11.8 miles per second or about 70000 km per hour /it's higher than the second circular velocity-L. Ch. / There are about 1000 cases of radars' observations of UFOs".

In the period from 1948 to 1962 the National Committee of aerophenomena investigations collected data of 81 cases of radars' fixation of UFOs, 60 of them were confirmed by visual observations, and so can't be assigned as radars' technical defects.

In this connection it's hard to overestimate the importance of the well-known case of the UFO detection by an reconnaissance aircraft B-47 of the American Air-Defence Forces, which was equipped with the newest electronic measuring instruments for that time. Above the Mexican Gulf early in the morning of June 17, 1957, the crew managed to radiolocate UFO, which for a long time was playing "cat-and-mouse" with the aircraft, and to measure the frequency of it's radiation. It was 28000 MGz.

There are cases when UFOs are observed visually and not radared; and vice versa.

The disappearance of air-crafts.

Supplement 2.

Confrontation between UFOs and air-crafts.

Facts for the present chapter were given from the books: Donald Mensel "About Flying Saucers". M., FL. 1962; Adolf Shneider "Visitors from the Universe", 1976; Frank Edwards "Flying saucers is a serious case", 1966-80; B. A. Shurinov "Paradox of the 20th century"/manuscript/ M. 1980; V. G. Azhazha and N. A. Shnee "Something about UFO"/manuscript/ M. 1980; F. Y. Zegel "UFO observations in the USSR"/manuscript/ 1, M., 1968; 2, M., 1975; 3, M., 1978, and also from various newspapers and magazines.

In the weekly magazine "Abroad" N 41, 1975, there was an article titled "The mysteries of the Bermuda Triangle". Here are interesting facts from this article. "The Bermuda Triangle" got it's name after disappearance of 6 air-crafts of the Naval Forces of the US together with their crews on December 5, 1945. The region they were flying round earlier was called "The devil's triangle", "The triangle of death", "The sea of ghosts" and "Atlantic's cemetery". "... before and after 1945 /here/ air-crafts and ships disappeared under mysterious circumstances. But they disappeared one at a time. This time a whole group of five air-crafts suffered the sad fate. It was also suffered by the sixth hydroplane with the crew of 13 pilots which had been sent for a raid."

"pilots, which had already finished their flights reported, that the weather was ideal" And suddenly series of strange events began.

"...the radio operator at the control tower... received a strange report. It was reserved the tape of their recorded conversation:

"Commander /Lieutenant Charles Taylor/. The earth...We are on the brink of a catastrophe...It seems that we have lost our course... We don't see the earth...I repeat...We don't see the earth.

The radio operator. What are your co-ordinates?

- We find it hard to report our co-ordinates. We don't know where we are...We seem to have lost our course.

- Turn to the west side.

- We don't know where the west is. Everything has mixed up... It is very strange...We can't define the direction...Even the sea looks like very unusual..."

The Commander of the leading air-craft reported:

"The both compasses are out of order".

"During all this time a very powerful radio-station of the Naval Base was unable to set a contact with the air-crafts, though the conversations between them were heard rather well".

The last words received from "Flight-19" were: "We are wrapping in a white water... We have lost orienting at all."

By the way, Colomb wrote about the white water of the Bagams in his ship's diary.

According to other data the last radio-gram from "Flight-19" was: "Don't fly after me...They seem to be from the Cosmos."

"About 7p.m. radio-station of the Naval Base not far from Maiame received a weak signal consisting of two letters "...FT... FT..." It was a part of the code of the lost section...Was it an attempt of the lost to let the Base know about them? In this case they sent their radiogram two hours after their fuel had come to an end.

On the next day the greatest operation in the history of search operations started. 240 ships of the US NF, 67 air-crafts from the air-craft carrier "Salomon", four torpedo-boat destroyers, many submarines, 18 ships of the shore guard search boats, hundreds of private air-planes, yachts, divisions of the British Navy and Aviation of the Bagama Islands. But the searches were failures...It is interesting to mention that neither "Flight-19" nor the hydroplane sent a "SOS" signal. The version of a forced alighting fell away. "Avengers" were able to remain on the surface of the sea during 90 seconds. The members of the crew had special training to leave the air-craft during 60 seconds".

file case

Only one case has been described here not fully. It was only one though the most sensational case of hundreds of cases of air-planes disappearance in the Bermuda Triangle.

Adolf Shneider in his book "Visitors from the Universe" enumerated a number of cases of air-planes' disappearance above the Bermuda Triangle. There were cases which nonplused all persons dealing with the "triangle" phenomenon and put in an embarrassing position all those who tried to refute "miracles".

Here is a number of traceless disappearance of air-planes, which can't be rejected: "Tudor-4" in 1948, the American transport air-craft in 1949, the English "Armel" 1950, and "York" 1953, the American "Super Constallation" in 1954, the bomber of the NF in 1956, "KV-50" 1962 and two "KS-135" in 1964. A lot of books are devoted to the Bermuda Triangle abroad. To our mind, Charles Berliz's book "The Bermuda Triangle" and "The Mystery of Atlantida" are the most truthful and documented. And on the whole if you critically and attentively analyse all the written

55

about it. Even by our press blasted against this problem, you will come to a conclusion, that no "natural" explanations can be found...

It was a small article in the newspaper "Moskovskaya Pravda", 15.11.1979, "An event in Valencia" was published.

"In Valencia the Spain air-craft with 119 passengers on board made a forced landing. As Reiter agency informed, the pilot of this air-craft, announced, that "the appearance of UFOs was a reason of their landing". Due to his words, UFO radiating two bright-red beams followed the air-craft during 15 minutes. Trying to brake away the pilot lowered the height of the flight, but the UFO continued to "hang by it's tail"... And further the author of the article, as usual made an unsuccessful attempt to cast doubt on the fact/ as eye-witnesses were at the same time victims, and there were more than a hundred of them./

In June of 1975 the Mexican air-craft saw an object approaching to it quickly. Having made some manoeuvres, it started to follow the air-craft. A hard vibration began at this time. The air-craft was losing height. The frightened pilot sent a distress signal to the earth and asked for a permission to land. Only near the landing line the object lifted up and disappeared. The examination of the air-craft showed a lot of damages of control surfaces and the bottom of the fuselage. The character of these damages was so unusual, that no reasonable explanations were found.

The following event took place in summer of 1956, in England in the Suffolk county. Here is only the final of the event presented.

About midnight the air-craft of the "Venom" type started from the Base of the English ADF, the air-craft was equipped with radiolocation installation. The pilot reported, that he saw a bright white fire and tried to follow the object. Having flid about 10 miles the pilot informed that he had lost the objective in the radar screen and visually. Then the station directed him to another objective, hanging in the air at 10 miles from Lekenhit. The pilot reported, that he saw the objective in the screen. After several seconds he lost it, because of the quick manoeuvre of the UFO, which came to the air-craft's tail at a moment. The pilot didn't even notices the manoeuvre, but it was observed in the radar screens on the earth. All his attempts to break away were failures. This "hunting for a hunter" lasted for 10 minutes, until the frightened pilot began to make a landing. It is interesting to mark, the object made his wonderful manoeuvre at the moment when the pilot had already caught the objective and was going to shoot.

The similar event took place in September of 1957 above the ADF Base in Albukern, in New-Mexico.

TASS MATERIALS /"White TASS"/ September 1976.

IRAN. The governmental information, list 26/SV IG.KB.039.A. Paris, September 21.

The France Press Agency Correspondent passes from Tegeran:

The Iranian government confirmed yesterday in the evening, that two jet planes "Fantom" of the Iranian ADF pursued a "flying saucer" above the capital on Saturday.

Two pilots informed in their turn that a mysterious object pursued them.

Interceptors lifted up in the air in the civilian air-port in Mehrabad, after controllers had found out a round object radiating red, blew, green light. The Tegeran newspapers presented the pilots' words, saying that when they overtook the "saucer" at the height of 1800 metres, it left them far back having developed a speed several times more than the speed of sound only in order to return and follow them.

When the pilots tried to disable it, their electronical and radiocommunicative systems were out of order as suddenly were "paralysed". According to their description this "saucer"

56

was as large as a half of the moon disc, as it was seen from the Earth, but it was three times brighter than the Moon.

Due to the report, a round object 15 feet in size soon deived from it's "aviabase" and landed to the south of Tegeran. This territory was combed by helicopters, but the results of the raid were not announced.

On the night of October 1, 1948, Lieutenant Gorman had an air fight with a diminutive UFO above Fargo /the Northern Dakota/which lasted for 27 minutes. After a usual patrol flight Gorman's "F-51" was coming back to it's base. He was already going to land when suddenly he noticed a lighting dot at a distance of a kilometre, which he took for a tail light. He asked the control tower for information, but they answered that there were no air-crafts near about.

file step

Then Gorman directed his fighter at the object. He reported the following: "The object is absolutely white and round, 6 or 8 inches in diameter and has something like a fluffy edging. It flashes out at one moment and goes out at another. When I came near to it, it suddenly lit with even bright light and swang to the left. It seemed to go into a power dive. I also dived, but couldn't overtake it. It began to lift up and swang to the left file step

Then Gorman directed his fighter at the object. He reported the following: "The object is absolutely white and round, 6 or 8 inches in diameter and has something like a fluffy edging. It flashes out at one moment and goes out at another. When I came near to it, it suddenly lit with even bright light and swang to the left. It seemed to go into a power dive. I also dived, but couldn't overtake it. It began to lift up and swang to the left again. I swang my machine and tried to catch him up. We were already at a height of 7000 f. Suddenly it swang to the right and we flied directly against each other...I went into a power dive and it flied over me at 500 f. Then it lifted up in a spiral at 1000 f. height and I again began to follow it".

The manoeuvres of this object made Gorman sure that the object was controlled by mind. An eye-witness, observing this Gorman's fight from the earth informed that he saw a light coming from a quickly moving object. The similar air fight took place on December 4, 1952 above the Avibase Laredo. Lieutenant Fogl on his fighter F-51 attacked a quick disc-shaped object, in response to which the object attacked the fighter. As a result the pilot was taken into hospital in a hard shock.

On January 7, 1948 at the AF Base Godman, not far from Fort-Nox /Kentucky/ an object was noticed in the sky, it was like an ice-cream ball with a red top. The information about this object was confirmed by a lot of eye-witnesses, among them there were both military and civilian persons. The officer on duty ordered to lift up air-crafts "F-51"

And here are extracts from the report of the ADF:

"Three air-crafts came up to the object and reported that, it was metallic and of a huge size... The Commander of the section, Captain Thomas F. Mantel communicated with the Control Tower and reported, that the object was situated just above them. "I am approaching it to have a good look of it, - Mantel broadcasted- It is just in front of me and is flying twice as slow than we... This thing is metallic and of a huge size. Now it is gaining height and flies with the same speed as I... I'll gain 20000 f. height and if I am not able to shorten the distance between us, I'll stop following it"...

At this the communication with Mantel was interupted!!/ And after several hours his body was found among the pieces of his aircraft near Fort-Nox...

57

On the same day, two hours later at the air base in Lokborn in Columbus /Ohio/ some people observed an unusual heavenly phenomenon. To their words, it was a "round or oval object, larger than "C-47"; it flew in a horizontal direction, with the speed of 500 miles per hour". More than 20 minutes they watched this object from the Lokborn Control Tower. The eye-witnesses affirmed, that it was emitting light from white to amber-coloured, and had a amber-coloured trace behind which looked like the exhaust of an engine, and this trace was five times longer than the object itself. It was moving as a lift up and down, and one time it seemed to touch the ground. The whole process was noiseless..."

58

From other not checked up sources the last words of Mantel were: "My God! There are people there..."

→ A. I. Apraksin spent all the war in a fighting aviation. He was decorated with orders: Order of the Red Star, Order of the Red Banner, Order of the Patriotic War, medals: "Medal for the Stalingrad Defence", "Medal for the Berlin Capture", "Medal for the Participation in the Patriotic War". In 1948-49 Apraksin worked on a testing aerodrome in Kapustin Yar.

On June 16 1948 he lifted the machine up in the air. At the height of 10500 metres he was above the compact cover of clouds. Half an hour after he had come to the course, he saw an unusual flying apparatus going the cross course to lifting down. The apparatus was a cucumber shaped. It was emitting shafts of light in the direction opposite to the direction of its flight. Apraksin having communications with the Base constantly reported about what he had seen and got an answer, that the apparatus was fixed by radars, he was ordered to lift down but obeyed. Then the base gave an order to approach the apparatus and if it continued to refuse to land, Apraksin would disable it.

According to this order Apraksin directed his craft to the apparatus. When there were only about 10 km. between them, the beams from the apparatus "opened as a fan", and lit up the craft, for a second Apraksin was dazzled. At the same moment he found out that all electrical devices of his craft and the engine were out of order. Gliding he lifted down and landed his craft without damage. At the last moment he saw the apparatus lifting up swiftly.

After usual in this case special examinations Apraksin was sent to the testing aerodrome in the European Section of the Arctic. At his new work he was shown a report about the analogues observation of the similar apparatus. This report coincided with that of Apraksin in all details. After three months Apraksin was taken back to his previous aerodrome. In spring of 1949 they began to fly on air-crafts lighting up to the 15 km height. Apraksin made six flights. Once another pilot informed that during his flight he observed something very similar to Apraksin had reported about, but the pilot didn't approach the UFO and had no problems.

On May 6, 1949 Apraksin made a testing flight on a new model of an air-craft and lifted up to the maximum possible height. When he was in the latitude of Volsk, the earth was covered with clouds. He communicated with Volsk and had this radio communication constantly.

Suddenly a flying object very similar to the previous one appeared. It was flying much higher, but then began to lift down. Then Apraksin directed his craft to this "flying cucumber". The speeds of the both machines were very high and the collision seemed to be unavoidable. At the distance of 10-12 km shafts of light were directed to him again. He was dazzled. The electric control was again out of order and besides that the front glass of the "light" was damaged. The pressurized cabin was broken and though Apraksin was in a special dress and helmet, he experienced the lowering of the pressure. He felt bad, but nevertheless controlled the craft and glided to the earth. His radio

communication with the base was stopped. With great difficulty Apraksin landed his craft on the bank of the Volga at 40 km. to the North of Saratov and lost his consciousness. And since that time he had had a lot of problems with his health /even spent some time in a lunatic house/ and became an invalid.

59

file trip

60

They were able to travel inside their galaxy. They learnt that in the centre of their starry world a "crusher" was. That the way of all stars through a long vortex of time leaded there. It was the end of everything. More over they learnt that the neighbouring galaxy was approaching to them inevitably, that the terrible catastrophe was to be soon...A question rose: "How will everything be saved? Where are safe places in the Universe? Is it possible to evacuate the whole worlds and how?..And at last how to save the individual "I" of each intellectual creature.

It could be proceeded successfully by concentrating, compression, lessening of volume and weight, but main...-transferring in another condition. Every living thing could be saved if to create genetical funds, and what was to be done with individual "I"? By destroying the whole a living thing made of light was created. Environment could influence it no longer. It obtained the ability to compress, to grow according to the set rhythm, It had memory, mind, sight, hearing...It couldn't only to propagate itself. But in this case durable interstar flights were possible. It was possible to find safe places in the Universe and start a life, to grow plants and rear animals under the command of those light thinking creatures, "imprints" of individual "I"s.

I confirm nothing in this question, but I have realized that a man is a very complicated living thing, a symbiosis. I warn that I don't try to analyse dualism and monism. I only present what I have heard and seen as an objective reality. Besides that they talked about one ancient working convention.

- so a man continues to remember all his life even when he is buried;
- only his cover is buried and essence is alive;
- May I have any evidences?
- Now you will hear the dead and will learn their feelings

Futher Kostrikin gave a description of his being in "The kingdom of the dead similar to the descriptions of their after death experience people having been reanimated /R.Moudy's book "Life after death"/ Malishev also saw a man from the next world who was his neighbour and died from alcohol abuse when he was on "without sun" planet. Malishev didn't come up to the man, as it was terrible though the man was smiling.

From his "contact" Kostrikin in particular found out the philosophical meaning of a life "A man, as it was explained to me, is free in his actions to a certain extend, neither a muderer nor his victim will disappear, everyone will get according to his deeds. That there is one truth for all, for atheists and believers, for people of various nationalities. This truth is: to be good or evil for a society."

And further: "The real life of an individual is somehow defined but his previous life and direct his future lives".

In it's essence it is a laconic and clear interpretation of a conception of "karma" - a foundation-stone of oriental phylosophies. And only ignorant people, who can't think independently, whose brains are full with dogmas, call these thruthes as idealism, mysticism and superstition. It doesn't come to their heads that "matter" is much richer reality as they can imagine. They believe without reserve in what they have been rammed orally and in written from. The authority of visitors of alien planets is nothing in comparison with these dogmas. That is the reason they never contact with visitors. Kostrikin left them for thousand years behind in his attitude, when declaring: "I have never been an admirer of mysticism and superstition. The both these words have been invented by people. Everything is natural

and material .
Only the third part of his report has been presented here. And where is the evidence of truthfulness of his contact? It exists. You only must read his book-report attentively. His predictions about time and place of UFO appearance have come true, his interesting "discoveries", which the official science doesn't want to know, are worth to be analysed, his detailed descriptions of space-crafts - crystals are also very interesting. For people with developed intuition the most evident is the story itself, it's organic logic, psychological saturation, it couldn't be invented, even if he be a Solomon. It could be written only by a witness of these events.

61

Belesin Valentin Ivanovich also had a contact. He is of the same age with Kostrikin Viktor Petrovich. Both of them wrote very detailed reports, both conducted very interesting scientific experiments /in particular, they suggested non-traditional mercurial energy generators/

* our scientists knowing nothing about works of Kostrikin and Belesin have worked out control specimens of spinor fields generators using the analogous principle.

Both Kostrikin and Belesin tried to take out patents for their discoveries and inventions, which in the opinion of the representatives of the official science were impossible, but they not only exist, but function disapproving our scientific paradigms. Both Kostrikin and Belesin have changed their notions about the world, and accordingly have made reappraisal of values, inspite of the fact that they differ very much.

Once Belesin was asked a question, if he knew the name Kostrikin. He thought for a moment and answered: "No, I have never heard". My question was conditioned by the fact, that they lived relatively near: Kostrikin - in Nalchik, Belesin - in Krasnodar. When I was sure that they had never seen each other, I suggested Belesin to read Kostrikin's book "Behind the edge of mystery" Belesin read the book for about ten minutes until ran across the place where "the next world" was described, shut the book and said: "What a rich fantasy this man has!".

Both of them had contacts. But Kostrikin according to his mind and interests and erudition was shown the world acceptable only for few persons. For the other wonderful and at the same time very pragmatic truths were discovered.

file sight

62

In September of 1966 the instruction AFR 200-2 was substituted for a new instruction AFR 80-17, which ordered all the commanders of aviabases to establish observation posts and investigate all cases of UFO flights, for ascertaining what it was in reality. At the same time directions of presenting reports about UFOs observed were given and detailed instructions for pilots behaviour at meetings with UFOs were presented. It was pointed out that ADF personnel were to assure the safety of the obtained pieces belonging or supposed to belong to UFOs and not to cause indignations, which would lessen their value for analysis /Vasiliev "UFO-evolution of American views and concepts", a manuscript, 1980/.

In the directions of the Commandor of the NF Stuff in the US OPNAV 94-HP-3B the instructions about the system of alarms on the American continent were presented and it was also ordered to report to commandors about the appearance of unknown rockets, UFOs, ships, submarines and air-crafts. In the supplement to the directives the pictures of disc-shaped and oblong UFO were featured /Burre "UFO: the Army talks", 1979/ Besides that for accelerating of UFO identifications the most of American warships had the pictures of the main UFO types /Adolf Shneider "Visitors from the Universe", 1976/.

In the reference book of the American AD the pictures of UFO in the form of a disc with lights was featured /Geigentaler "UFOs out-of-earth space-crafts, 1976/.

It must be also mentioned that in the textbook of the AF Academy of the US "Indroduction in the science of cosmos", published in 1968 and destined for the students of the Academy, UFOs were described in details in 14 pages and it was marked definetely: "The most clear theory consists in the following: UFOs are material objects with crews or remote control and which are considered to be out-of-earth. It is the best to be attentive, vigilant when weeting them and not to take extreme measures". Then in the textbook it was analysed the possible reasons, why contacts between people and UFOs had not be established and the examples of the attemts to intercept and disable UFO were given. In the conclusion it was pointed out that scientific researches of UFO ran across mankind's limited knowledge of physics and that our modern knowledge was inapplicable for understanding UFO's features/Adolf Shneider -"Visitors from the Universe", 1976/.

American special magazine devoted to UFO "UFO-logy"/1976, volume 2, N 3, p.34/wrote "Candidate-President of the US Jimmy Carter spoke ardently in support of the idea of UFO reality he considered himself among those 5000000 Americans having observed UFO. He had his experience in 1973 in the town of Tomaston, in Georgia, he observed UFO together with other twenty eye-witnesses. The object was as large as the Moon and changed it's colour several tomes from red to green. It seemed to be a round thing consisting of three flashing fiery balls. In his interview to Malkom Balfur from "The National Inquire" Carter said: "if I am elected a President, I'll make all the information about UFO observations available for public and scientists".

But it happened nothing of the kind as what Carter wanted to do as a candidate, he already couldn't make and had no right to make as a President. And meanwhile in the period when Carter was a President in February 1978 NASA considered UFO to be a subject of the special attention of the Soviet of National Security - the highest body coordinatng and controlling the functioning of all governmental bodies in military politics, the constant members of which were the President, Vice-President, State Secretary,

Minister of Defence /the first memorandum of the intercontinental net of investigations and analysis of galaxy UFO space-crafts, 1978/.

NASA meeting the demands of Pentagon and the CIS undertook some measures aiming at concealing all data of UFO observations in the space and on the Moon. As it has been already mentioned it was presented some data about the facts, that during the fulfilment of the program "Appolon" finished in 1972, in the Goddard Space Centre it existed an instruction to "clean the pictures and telemetrical data coming from the Moon, referring to UFO." /Adolf Shneider "Visitors from the Universe", 1976/

63

Measures to prevent the investigations of UFO observations obtained by American astronauts were taken by Pentagon in the following years. So in the letter of the Commandor of the Communicative Department of the AF Ministry, Colonel Senn sent in 1977 to the worker of NASA, Lieutenant-General Crow it was pointed out, that standard answers to the public inquiries about observations of UFO in space had been worked out by AF and a hope was expressed that it would be possible to prevent the resumption of UFO researches by civilian scientists.

It is also known that American leadership always opposed the creation of any international organizations dealing with UFO study. It is confirmed by the reaction of the American Government to the Grenada proposal to discuss the question about organizing a special department in the UNO for coordination of UFO researches made at the UNO session in 1977. The State Department then immediately gave instructions to the UNO representative Young to declare, that "the USA will not take part in the adoption of the resolution calling to found any organization dealing with the investigation of the possibility of contacts with mental life within or outside the Solar system." /The second memorandum of ICUFON 1980/. AS a result of this US position the Grenada proposal was blocaded. And at the repeated discussion of the proposal in 1978 it came to the appeal to all countries to inform about their observations and investigations of UFO the UNO Committee of peaceful use of space.

The American authorities make short work of those officials who against all instructions start to research UFO phenomena or try to lay bare the mysteries "under seven seals". So in 1952 the Air Force Command refused to give any explanations to the US NF Minister Kimball about two disc-shaped UFOs observed personally by him during his flight above the Hawaiian Islands, and when Kimball tried to start the investigations by the naval reconnaissance forces, the CIS pressed for his dismissal /Shurinov B.A. "The paradox of the XX th centure", manuscript 1980/.

And here is the latest example, proving that a modern American administration and the Soviet of National Security continues to pay serious attention to the UFO problem. In January of 1981 the Director of ICUFON Fon Kevizky sent to President Reagan two memgranda, in which he expressed his preoccupations in connection with the supposedly existed threat to our civilization from UFO. These memoranda included 20 former secret government documents and materials about the actions of military forces of different countries against UFO.

On November 21 1981 Fon Kevizky received an answer on behalf of the Soviet of National Security /on it's form/ written by the Main Military President Councillor, Major-General Robert L. Shweitser, which read:

"The President is well aware of the danger, which have been so obviously documented by you, and he is making his best as soon as possible and at the same time very carefully to find the possibilities to ensure security in the sphere of the National defence"/the third memorandum of ICUFON, 1982/. Very soon the President Councillor, Major-General Robert L. Shweitser was dismissed from his high post without explanations.

In 1975 after the adoption of the amendment to the freedom of information law, American public UFOlogical organizations tries to get a free access to the CIS secret materials of UFO. However the CIS agreed to promulgate only the part of the existed documents and refused to discover the content of the others. Then the organization brought an action against the CIS. It demanded of the CIS to give 57 things founded at the places where UFOs had crashed. But at a Court Session in July 1978 the General US Procurator was present and took the CIS under his protection and accepted an action for a few number of documents, saying that the sign of secrecy was stamped to them later and so they couldn't be given. /mag. "International UFO Reporter", July, 1978/ And Lawyer Rotblat from New-York, brining an action against the CIS, declared that he possesed documents demonstrating that the CIS continued UFO investigations concealing the fact thoroughly.

65

The situation when people-UFO observers were worked at, intimidated and even taken into lunatic houses /as it was with Apraksin/ resulted in our loss of the great amount of information. Military men /not only soldiers, but also officers of high ranks/began to hush up the cases of the UFO appearances and contacts maybe. And civilian pilots and other workers have followed their example. It is a not groundless supposition, that cosmonauts in 1979 /after Romanenko and Grechko's observations of UFOs in the orbit/ were forbidden to give such information "outside".

The group of UFOlogists from Obninsk went to "Kerzhach" to clear up the mysterious circumstances of Gagarin and Seregin's death at their UTI MIG-15. Some independent eye-witnesses of this catastrophe were found. All of them said that the air-craft followed a luminescence object of a large size, which caused the catastrophe. The materials of this catastrophe examinations are kept a secret.

"In summer 1961 a huge cigar 800 m. long appeared above Voronezh at the height of 2000 m. and hung without moving. It happened in the daytime and thousands of people saw it... Suddenly the cigar became transparent and disappeared. Soon fighters came and began to fly around the place looking for the cigar..." - it is from A. Sheider's book "Visitors from the Universe".

Data about UFO intrusion in the Asian part of the Soviet Union were published in Dick Lester's article in the American magazine "Saga". It was presented in it that Japanese wireless enthusiast Kaen Ku seemed to have heard the following conversation broadcasted by a MIG pilot:

- Below... a flying disc - reported the pilot in a low voice - it is a large round object with oblong hatches lighting with blue.

When the UFO approached to his air-craft the pilot in accordance with the order obtained fired rocket volleys and reported about it, and then added:

- Nothing! The rockets have exploded at 600 m. from the object...

Then it was heard a crash and the pilot's agitated voice:

- It has turned to the right... It is coming into collision... I have no time for... These were the last words that Kaen Ku managed to hear.

In this accident that took place to the north of Vladivostok above the Sihote-Alin mountains, Dick Lester saw the confirmation of such other actions from UFO, as a result of which more than 15 pilots of the US AF and NF fell victims.

On April 27 1970 a faster-than-sound bomber making a flight from Moscow to Vladivistok disappeared without leaving a trace above the Siberia. It's pilot was having radio communication with a ground station and suddenly the communication was broken off.

During the intensive raid more than 200 air-crafts searched thoroughly the territory above which the bomber was situated when the communication was broken off. "We are not alone here, not less than 25 space-crafts are above us," pilots, participants of the search, reported, -"but they are very high and we can't approach them."

"20 years ago a small post air-plane with 4 passengers on it's board making a flight in accordance with it's shedule disappeared above the Central Russia. Two days later the plane was found unharmed near Tobolsk /Siberia/. It's engine, radio, and sack of letters were in order. Fuel vessels were full with

fuel for a two-hour flight. but 1 passenger disappeared without any trace. It was mentioned nothing about a pilot. At 100 m. from the plane an even circle 30 metres in diameter with burnt grass and pressed soil was found" - from A. Shneider's book "Visitors from the Universe", 1976.

66

At this we finish our not complete review of intrusions "from without" in the air space above our country, though intrusions themselves are not finished.

On July 1, 1954 in the radar screen in the Aviabase in Griffit /New-York/ a strange objective was found and a fighter "Statfire F-94" was lifted up to intercept it. Two minutes later a pilot reported that he saw a glittering disc-shaped object hanging in the air motionless and flied up to it. Suddenly the engine of the fighter came out of order. The pilot saw instruments stop functioning and felt a current of hot air on his face. The pilot ordered his radio operator to catapult and then followed him. Leaving his fighter the pilot saw the UFO once more. The both pilots landed successfully, and their machine damaged some living houses, some people fell victims to this catastrophe.

Captain Jin de Beisak was the first pilot of a cargo craft C-46, which took off Port-Alegre in San-Paulo at night of November 3, 1957 /the day of the most number of UFO observations in the US /. The air-craft was flying at a height of 7700 feet. At about 1.30 a.m. on November 4 the pilot saw a strange red light a bit lower and to the left of the air-craft. He said to another pilot to incline and have a look of a "real flying saucer". The latter had a look and they laughed at this joke. But soon they were past laughter. After a few minutes when Beisak had a look downwards and to the left, he saw the same red object quickly approaching them. The pilot tried to swing, but the object's speed was higher than that of the air-craft, it lifted up quickly. Before Beisak managed to end his manoeuvre, the UFO had flied very near to the craft. The pilots had the feeling of something burning very near, but indicators didn't register it. The examination showed that a radiotransmitter, generator had been burnt out. Captain Beisak turned his machine around and reached Port-Alegre with great difficulty.

Owing to complete and effective investigations of the Air Phenomena Research Organization /APRO/which presented an article in it's bulletin in May of 1959, the details of the accident with a military air-craft became aware.

The first of April of the 1959, 7.44 a.m. - this moment was a start point of the tragedy - an extreme radio call from an air-craft C-118 with four members crew on it's board, which had taken off from the ADF Base Mak-Chordfield, Takoma, Washington: "We have struck against something or something have struck against us". Then a few seconds of silence after which the pilot cried: "Help! Help!" and then: "Here it is! Here it is!". The large air-craft fell to pieces between Samper and Orting. Nobody remained alive. Military athorities cordoned the territory off quickly to save it from civilians and reporters. Eye-witnesses of the catastrophe saw two orange objects following "C-118" very closely.

ADF Major Mervin Stenvers flied on the night of June 22, 1956, on the air-craft "KONVER"/C-131D/ The flight was conducted at a height of 16000 feet not far from Piksli, California. Later the pilot said that suddenly the air-craft began to tremble and struck against something with it's right board. Before Major Stenvers managed to do something, "KONVER" had gone into a power dive. Only at a height of 9000 feet the pilot managed to align the machine. Major Stenvers radioed, that his craft had been struck by "a flying saucer" and asked for permission to make a crash landing in the airport Bakersfield. Jornalists made photoes of

the left part of the air craft. The pilots were surprised at the fact that they had managed to land.

On April 18, 1962, a shining red object crossed the United States from New-York to Utah and was registered by radars all it's way along. It landed near an electric power station and put it out of action. After 48 minutes it exploded in the air followed by air-crafts - interceptors.

67

In August, 1965 thousands of people observed air-crafts - interceptors following 7 UFOs in Daluta /Minnesota/. A radar base registered both air-crafts and UFOs.

In January, 1965, the third massive UFO flight upon Washington took place. On January 11 at about 4 p.m. The 20th group of signallers which were in the military store in street 19 rushed to windows to watch an interesting "performance". The signallers had been given notice about it by their comrades from a radar department. 12 persons observed a group of 15 white egg-shaped objects flying at a height of 12-15000 feet. They were followed by two fighters, but UFOs outstripped their persuers easily. It was "The Star" one of the first newspapers to inform about the fact enumerating the eye-witnesses' names.

On October 22, 1978 twenty-year Australian pilot Frederic Valentich disappeared without leaving any trace together with his craft during his flight above the Straits of Bassov separating Australia from Tasmania. Before the communication with him was broken off, he had radioed that he was followed by an UFO and asked whether this UFO was registered by radars. He got an answer that no other air-crafts were in this region. The object was not registered by radars.

One of the most interesting cases, being to the point, was described in A. Sheider's book "Visitors from the Universe", 1976.

We are presenting this case here with some shortening.

On January 12, 1972, in the evening, Mrs. Parker from Oklahoma had a telephone conversation with her daughter, which was suddnly interrupted and the both women heard somebody's voice:

- Here is the Central Post Norad /the command of the US ADF/... It is a battle alarm "red... Moscow is informed... We have a problem... Accept Tinker /the name of an aviabase/... We are trying to call Tinker by the second channel...

Then Mrs. Parker put the receiver, and after some time again called her daughter who had heard that two fighters were sent to intercept an UFO flying to Houston, Alamogordo, Los-Angeles.

Then the voice continued: "We register objects appearing from the Pacific Ocean and the Mexican Gulf... Fighters are on their way... It is not training alarm... It is a battle alarm..."

After that Mrs. Parker's daughter heard: "One object has fallen into the Pacific Ocean, and the fighters have been disabled!"

Sherry's/it's the name of the daughter/ husband said that he heard, that two fighters "F-104 were disabled above the Alamogordo Desert, and two UFOs were lifting down or diving. At the end of the conversation the voice said: "The fighters are observing the objects, invite the President to the telephone..." Then a voice at the other end: "President is hearing..." - and the voice very like the voice of President Nickson. - "It was the most unusual conversation I have ever heard..."

Then Sherry' husband communicated with the CTS of Oklahoma and asked, whether it could be that they had been connected with the state line, he got an answer, that it seemed they had been connected with NORAD.

American investigators of UFOs examined this case very carefully and came to the following conclusions:

1. A battle alarm took place on that day.
2. UFOs were observed above the Pacific Ocean and Mexican Gulf.
3. Fighters were raised in the air and two of them were disabled, and two UFOs fell down in the ocean.

4. The President's voice was heard.

Then it was informed that there were witnesses who saw the pieces of the disabled air-crafts, and the picture of UFOs falling in the Ocean existed.

The description of all cases of collisions between air-crafts and UFOs could make a collection of many volumes of dramatic events in the air. Our task was to give a review of some cases of the kind. As it has been mentioned above, fighters often had attempts to intercept UFOs after radars' registrations.

file moon

Supplement 3.

Abnormal phenomena on the Moon.

It seems to be not a misunderstanding that during the fulfilment of the program "Appolo" it was ordered to "clear out" all pictures and data obtained from the Moon which could be identified with UFOs.

Nevertheless the pictures of the Moon surface made by the Soviet and American space apparatuses /in particular by "Moon-9" and "Lunar orbiter-2" fell into the hands of people who delved into all details and were carefully examed by them. As a result of it, as one in a number of examples, an interesting article "Oh, this mysterious Moon" was published in the magazine "Youth Technique" n 5 in 1969.

In this article State prize laureate, stereo film inventor S. Ivanov and engineer A. Brukhonenko attracted readers' attention: "...the distances between stones 1, 2, 3, 4 are equal! Besides that, they are equal in size...Pay attention to the fact that there is no hill near the place from which these stones could have rolled down and "by chance" stood in such a way...stones from 5 to 11 are also situated along a straight line parallel to the line of the first four. And stones 2, 7, 12 and 13 are situated along the line crossing these parallel at an angle of 60 degrees. Stones 1, 15, 16 also form a line. And at last one more curious detail: stones 1, 14, 15 form a equilateral triangle".

Further the conversation is continued by engineer A. Abramov: "...what are the pointed shadows, long and shorter are crossing the separate part of the picture? The longest of the shadows could be cast by only a very tall monument on the Earth. Shorter shadows are cast by objects /8 of them/ of regular conic forms, as large as tall Christmas trees. These things are more curious, because they are situated on a very small square 165X225 metres. Futher wonderful geometrical regularity of these objects are enumerated, their similarity to the plan of the Egyptian pyramids /"with the exactness of the mirror reflection"/ The article is illustrated with various pictures.

As far as mysterious light phenomena on the Moon are concerned, they have been observed with telescopes for a long time already. The first observation of an unusual light dot on the shady part on the half-moon was registered in Vormei in 1450.

In 1968 the National Administration on aeronautics and space flights /USA/ issued "Chronological Catalogue of events on the Moon"

Here are some extracts from it:

September 7, 1820

During the lunar eclipse French scientists observed strange

objects moving along a straight line with equal distances between them. They were situated in the middle of the Moon disc and were moving with a military regularity.

April 24, 1874

Professor Shafaric from the Prague Observatory informed, that he saw a shining object moving along the Moon disc, the object left the Moon, then and flied in space. Shafaric asked : "What could it be as if not a flying apparatus? Planets and moons don't throw away objects".

1912

American astronomer Garris informed, that he had seen a large object with the diameter of 80 km flying above the Moon. The object was seen clearly and flied so close to the Moon surface that cast a shadow on it.

April 24, 1972

The Passay Observatory made a photo of a mysterious light fountain in the Aristarkh crater. The light emission reached the height of 162 km. and it's speed was 1,3 km per second. On reaching the top "the fountain" fell down 60 km. aside.

It is interesting the appearance of objects which have never been observed on the Moon and the disappearance of elements of the surface which were well-known for a long time.

So in 1922 in the Archimed crater three banks appeared though now volcanic activity was noticed.

On all lunar maps before 1886 the Linne crator near the lunar equator was depicted. And suddenly in 1886 it disappeared and only a white spot remained. And modern astronomers have found a cupola at this place. And on the whole there are many cupolas with diametres from several metres to thousands of kilometres on the Moon. To Malishev's words /and he has passed all the professional tests/ he saw buildings very like hangars and other "flying saucers" on the Moon.

On July 29 1953 a straight bridge 20 km long was found on the Moon. It stretched above the Sea of Crises, and it's shadow was distinctly seen. Well-known astronomer Wilkins confirmed the existance of this bridge

In 1956 astronomer Robert Curtis filmed the surface of the Moon and was very much surprised at seeing an un-known light cross near the Fra Mauro crater, all the four sides of which had an equal length of several kilometres.

Some scientists supposed that aliens constructed their main bases for visiting the Earth on the other side of the Moon, where they are inaccessible for the curious eyes of earth-men. This supposition conforms to the evidences of auctronauts having been on the Moon and to the words of Malishev, an illiterate provincial boy, as he was in 1975 on the day of his "contact".

It is characteristic that NASA published only a small part of 250000 pictures of the Moon.

END OF TRANSMISSION. DEAR FRIENDS, HAVE A NICE HAPPY YEAR, LWISH US CLEAR the UFO PROBLEM COMPLITELLY IN !((# 1993.
