[REPLY](#)

Hello! I am planning to use mistfourms for my community, and I want to use the domain [www.imperiumgaming.site](#)

I am having some problems however...

When I link the domain name, it says that it hasn't been set up correctly.

"We did not add the domain 'www.imperiumgaming.site' because it's not pointed correctly to mistforums.com"

I have gone through [this](#) guide over and over, but I can't get it to work.

I need some help, this is what I have on the Domain website (123 reg):

Manage your DNS for [imperiumgaming.site](#)

Please note: Your DNS is not currently set to the 123-reg nameservers.

To use the 123-reg DNS service, your domain must use the default 123-reg nameservers
Our systems have detected that [imperiumgaming.site](#) uses the following nameservers:
server1.mistforums.com, server2.mistforums.com.

[Use 123-reg default nameservers](#)

[Basic DNS](#) [Advanced DNS](#)

Advanced DNS is recommended for advanced users only, and allows full customisation of your DNS settings.
Using this form will disable the basic DNS view.

Warning: If you have an @ record set to a CNAME, all other @ records (including MX) will be ignored and set to the same domain to which it points.

DNS ENTRY	TYPE	PRIORITY	TTL	DESTINATION/TARGET	
Hostname www	Type CNAME			Destination/Target server1.mistforums.com.	☒ ☐
Hostname @	Type CNAME			Destination/Target www.imperiumgaming.sitr	☒ ☐
Hostname (eg. something imperiumgaming.sitr)	Type CNAME ▼			Destination CNAME (eg. www.imperiumgaming.sitr)	Add ☒

Any help? Thanks.

[REPLY](#)

Hey there!

try delete the records and point your nameservers to ns1.mistforums.com and ns2.mistforums.com

that might work.

(dont take me up on my word though!)

Also sorry that u havent recieved a reply, seems like the forum is dead.
