

BITCOIN REFUND SCRIPT V6

With this method, you will be able to get anything from
<https://www.g2a.com> completely for FREE

HOW IT WORKS?

We will use a FREE browser extension called Tampermonkey and a script that runs server side javascript whenever we make an order on G2A.

As soon as you are redirected to the checkout, **this script will activate and change the timezone of your payment gateway by -1h**. Let's say you have placed an order at 10pm. This script will tell G2A that you have placed an order at 9pm. **G2A will count that as a server error and will give your money back**, buuuuut before that, their system will detect your payment at 10pm, and immediately send your purchased items to your email box.

Congrats! You have ended up with items + refund ;)

DISCLAIMER

G2A is not stupid and they are patching this quickly. I've been playing with them since 2010 when they were founded, and **in 16 years this method only worked for maybe 5 weeks in total**. So each version of my script works usually a week. This 6th version still works, but I suggest you hurry.

***If you see this pdf document this means everything is still working - I will delete everything you are reading right now if G2A fix this.**

IMPORTANT: READ THIS OR IT WILL NOT WORK

Keep in mind that **G2A will only refund your expired order if it is above 0.001 BTC**. Any lower amount is not prioritized by their refund system and will require you to contact G2A's support to get a refund. This will result in your request being REJECTED as they will find out that the order was already processed by them.

You MUST use any amount higher than 0.001 BTC and it will be automatically refunded without problems. To make this work, you must add items to your cart that are worth at least 0.001 BTC in total. It could be one or multiple items - it doesn't matter. There are no limits on the maximum value of your cart.

OK, LET'S MAKE THE FIRST REFUND

I've made YouTube video to make things easier: <https://www.youtube.com/shorts/ldU5ybvbjLw>

Here is a summary of the video and LINKS:

1. Install the Google Chrome extension Tampermonkey ([link](#))
2. Install a script that alters your browser via JavaScript ([link](#))
3. Create an order on G2A and pay with Bitcoin.
4. Claim your products (the order will be successfully processed by G2A)
5. Wait a few minutes for a refund.

They will refund your bitcoin because the order is marked as "Expired" on our client but processed on the actual server, its this confusion that allows the script to work and we get the items and the bitcoin back.

***In Tampermonkey extension settings remember to enable Developer mode, Allow user scripts, Allow in incognito**
