

If you have problems running the game on macOS:

`chmod +x`

`sudo xattr -r -c`

If macOS cannot open the file:

1. Right-click on the downloaded installation file and select "Show Package Contents."
2. Go to the "MacOS" folder and find the file "NLY."
3. Open the "Terminal" application.
4. Type the command `chmod +x`, then add a space and drag the "NLY" file into the terminal, and press Enter.
5. The file should change its icon to "UNIX executable," after which the application will run correctly.

If macOS says the file is damaged:

1. Right-click on the downloaded installation file and select "Show Package Contents."
2. Go to the "MacOS" folder and find the file "NLY."
3. Open the "Terminal" application.
4. Type the command `sudo xattr -r -c`, then add a space and drag the "NLY" file into the terminal, and press Enter.
5. The file should change its icon to "UNIX executable," after which the application will run correctly.

How to Allow an Unknown Developer to Run a Program:

1. Try to open the application. You will see a warning that the app cannot be opened because it is from an unidentified developer.
2. Close this message.
3. Open "System Preferences."
4. Go to the "Security & Privacy" section.
5. In the "General" tab, you will see a message indicating that the app has been blocked.
6. Click the "Open Anyway" button.
7. Confirm your choice by clicking "Open" in the pop-up window.
8. The application should now open without any issues.
