Breach: true

Name: Dubsmash

Website: dubsmash.com

Bio: In December 2018, the video messaging service Dubsmash suffered a data breach. The incident exposed 162 million unique email addresses alongside usernames and PBKDF2 password hashes. In 2019, the data appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by a source who requested it to be attributed to "BenjaminBlue@exploit.im".

Creation Date: 2018-12-01T00:00:00

Name: Flash Flash Revolution (2019 breach)

Website: flashflashrevolution.com

Bio: In July 2019, the music-based rhythm game Flash Flash Revolution suffered a data breach. The 2019 breach impacted almost 1.9 million members and is in addition to the 2016 data breach of the same service. Email and IP addresses, usernames, dates of birth and salted MD5 hashes were all exposed in the breach. The data was provided with support from dehashed.com.

Creation Date: 2019-07-16T00:00:00

Name: Gravatar

Website: gravatar.com

Bio: In October 2020, a security researcher published a technique for scraping large volumes of data from Gravatar, the service for providing globally unique avatars . 167 million names, usernames and MD5 hashes of email addresses used to reference users' avatars were subsequently scraped and distributed within the hacking community. 114 million of the MD5 hashes were cracked and distributed alongside the source hash, thus disclosing the original email address and accompanying data. Following the impacted email addresses being searchable in HIBP, Gravatar release an FAQ

detailing the incident.

Creation Date: 2020-10-03T00:00:00

Name: Twitter

Website: twitter.com

Bio: In January 2022, a vulnerability in Twitter's platform allowed an attacker to build a database of the email addresses and phone numbers of millions of users of the social platform. In a disclosure notice later shared in August 2022, Twitter advised that the vulnerability was related to a bug introduced in June 2021 and that they are directly notifying impacted customers. The impacted data included either email address or phone number alongside other public information including the username, display name, bio, location and profile photo. The data included 6.7M unique email addresses across both active and suspended accounts, the latter appearing in a separate list of 1.4M addresses.

Name: Twitter (200M)

Website: twitter.com

Bio: In early 2023, over 200M records scraped from Twitter appeared on a popular hacking forum. The data was obtained sometime in 2021 by abusing an API that enabled email addresses to be resolved to Twitter profiles. The subsequent results were then composed into a corpus of data containing email addresses alongside public Twitter profile information including names, usernames and follower counts.
