Breach : true
Name : Adobe
Website : adobe.com
Bio : In October 2013, 153 million Adobe accounts were breached with each containing an internal ID, username, email, encrypted password and a password hint in plain text. The password cryptography

was poorly done and many were quickly resolved back to plain text. The unencrypted hints also [disclosed much about the passwords](http://www.troyhunt.com/2013/11/adobe-credentials-and-serious.html) adding further to the risk that hundreds of millions of Adobe customers already faced.

Breach : true

Name : Anti Public Combo List

Bio : In December 2016, a huge list of email address and password pairs appeared in a "combo list" referred to as "Anti Public". The list contained 458 million unique email addresses, many with multiple different passwords hacked from various online systems. The list was broadly circulated and used for "credential stuffing", that is attackers employ it in an attempt to identify other online systems where the account owner had reused their password. For detailed background on this incident, read [Password reuse, credential stuffing and another billion records in Have I Been Pwned](https://www.troyhunt.com/password-reuse-credential-stuffing-and-another-1-billion-records-in-have-i-been-pwned).

Breach : true

Name : CafeMom

Website : cafemom.com

Bio : In 2014, the social network for mothers [CafeMom](http://www.cafemom.com) suffered a data breach. The data surfaced alongside a number of other historical breaches including Kickstarter, Bitly and Disqus and contained 2.6 million email addresses and plain text passwords.

Creation Date : 2014-04-10T00:00:00

The logo for CafeMom, featuring the word "cafemom" in a lowercase, sans-serif font. The "cafe" part is in a teal color, and "mom" is in a light grey color.

Breach : true

Name : Canva

Website : canva.com

Bio : In May 2019, the graphic design tool website Canva suffered a data breach that impacted 137 million subscribers. The exposed data included email addresses, usernames, names, cities of residence and passwords stored as bcrypt hashes for users not using social logins. The data was provided to HIBP by a source who requested it be attributed to "JimScott.Sec@protonmail.com".

Breach : true

Name : Collection #1

Bio : In January 2019, a large collection of credential stuffing lists (combinations of email addresses and passwords used to hijack accounts on other services) was discovered being distributed on a popular hacking forum. The data contained almost 2.7 billion records including 773 million unique email addresses alongside passwords those addresses had used on other breached services. Full details on the incident and how to search the breached passwords are provided in the blog post The 773 Million Record "Collection #1" Data Breach.

Breach : true

Name : Dubsmash

Website : dubsmash.com

Bio : In December 2018, the video messaging service Dubsmash suffered a data breach. The incident exposed 162 million unique email addresses alongside usernames and PBKDF2 password hashes. In 2019, the data appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by a source who requested it to be attributed to "BenjaminBlue@exploit.im".

Breach : true

Name : Evony

Website : evony.com

Bio : In June 2016, the online multiplayer game Evony was hacked and over 29 million unique accounts were exposed. The attack led to the exposure of usernames, email and IP addresses and MD5 hashes of passwords (without salt).

Breach : true

Name : Luxottica

Website : luxottica.com

Bio : In March 2021, the world's largest eyewear company Luxottica suffered a data breach via one of their partners that exposed the personal information of more than 70M people. The data was subsequently sold via a popular hacking forum in late 2022 and included email and physical addresses, names, genders, dates of birth and phone numbers. In a statement from Luxottica, they advised they were aware of the incident and are currently "considering other notification obligations".

Breach : true

Name : MyHeritage

Website : myheritage.com

Bio : In October 2017, the genealogy website [MyHeritage](https://blog.myheritage.com/2018/06/myheritage-statement-about-a-cybersecurity-incident/) suffered a data breach. The incident was reported 7 months later after a security researcher discovered the data and contacted MyHeritage. In total, more than 92M customer records were exposed and included email addresses and salted SHA-1 password hashes. In 2019, [the data](https://www.theregister.co.uk/2019/02/11/620_million_hacked_accounts_dark_web/) appeared listed for sale on a dark web marketplace (along with several other large breaches) and subsequently began circulating more broadly. The data was provided to HIBP by a source who requested it be attributed to BenjaminBlue@exploit.im.

Breach : true

Name : MySpace

Website : myspace.com

Bio : In approximately 2008, [MySpace](http://motherboard.vice.com/read/427-million-myspace-passwords-emails-data-breach) suffered a data breach that exposed almost 360 million accounts. In May 2016 the data was offered up for sale on the ["Real Deal"](https://www.troyhunt.com/dating-the-ginormous-myspace-breach) dark market website and included email addresses, usernames and SHA1 hashes of the first 10 characters of the password converted to lowercase and stored without a salt. The exact breach date is unknown, but [analysis of the data](https://www.troyhunt.com/dating-the-ginormous-myspace-breach) suggests it was 8 years before being made public.

Breach : true

Name : Netlog

Website : netlog.com

Bio : In July 2018, the Belgian social networking site [Netlog](https://oag.ca.gov/system/files/Communication%20to%20Users%20-%20FINAL_0.pdf) identified a data breach of their systems dating back to November 2012 (PDF).

Although the service was discontinued in 2015, the data breach still impacted 49 million subscribers for whom email addresses and plain text passwords were exposed. The data was provided to HIBP by a source who requested it be attributed to "JimScott.Sec@protonmail.com".

Breach : true

Name : Twitter (200M)

Website : twitter.com

Bio : In early 2023, over 200M records scraped from Twitter appeared on a popular hacking forum. The data was obtained sometime in 2021 by abusing an API that enabled email addresses to be resolved to Twitter profiles. The subsequent results were then composed into a corpus of data containing email addresses alongside public Twitter profile information including names, usernames and follower counts.

Breach : true

Name : Verifications.io

Website : verifications.io

Bio : In February 2019, the email address validation service verifications.io suffered a data breach. Discovered by Bob Diachenko and Vinny Troia, the breach was due to the data being stored in a MongoDB instance left publicly facing without a password and resulted in 763 million unique email addresses being exposed. Many records within the data also included additional personal attributes such as names, phone numbers, IP addresses, dates of birth and genders. No passwords were included in the data. The Verifications.io website went offline during the disclosure process, although an archived copy remains viewable.
