

Release note kPlugin v1.65

- **Solving the problem** (with characters build with side loaded mod) **that caused huge freeze of time when inviting or swapping girl in freeH and when using the option Invite card in story.**
- **Adding possibility to invite girl at home from Diary** (when diary is open at home, restricted to deflowered girl, story character could be invited to but not as the first girl)
- **Now, date will let you decide if it ends it with H and Morning sex should occur more frequently.**
 - * during date with friend, kPlug will temporary force girlfriend state, dialogues lines will reflect that.
 - * for each girl you invite in your room, kPlug will automaticaly tweak the events history on these ones, you won't be able to see the morning event where the girl have leave your place before you and the one where she's asking to use your shower.
- Fixed some other minor bugs...

I received some bug reports with buddies, especially with futa ones, but I could not reproduce them, I still need to do more research on that.

Release note kPlugin v1.64

Warning ! at first sight buddy, futanari and Invite card in story options disappeared...
Since 99,9% of koikatsu users run it with BepInEx, as mentionned in the manual, when there are cards of characters build with side loaded mod, accessing these cards deeply impact some loading times, so I rearrange those options to let you minimize the troubles.

-To make the Futanari option available,

Create the folder «**kFuta**» in **UserData/chara/** and put some cards inside, could be male or female, in any case the character will be load as a girl.

The futa cards folder is read when you open the selector from the config menu and when you load a save.

-To make the invite Buddy option available,

Create the folder «**kBuddy**» in **UserData/chara/** and put some male or female cards inside, female card will be considered as futa characters and will appears with boobs and dick. Once the kBuddy folder exist, an option to search in male chara folder is available, However if inside there's thousands male cards built with side loaded accessories that is not a good idea.

The buddy cards folder (and the male folder if the option include it) is read each time a H scene starts (only when the H scene allow invitation menu).

-To make the Invite cards in Story option available,

Create the folder «**kWhore**» in **UserData/chara/** and drop some female cards inside (can be male, but they will be load as female). Same logic than for the buddy option, an option to search in female chara folder will be available, but I insist, if inside there's thousands female cards built with side loaded accessories you shouldn't use that one.

The whore cards folder (and the female folder if the option include it) is read each time a H scene starts (only when the H scene allow invitation...).

Those 3 options will appear in a new tab from the config menu, the Extra tab. There's some additional option do customize futa and buddy functions.

- **Buddy invitation is available at any time** (if the option is active)
- **Buddies join the scene with their clothes, look at them and press P to strip them off.**
- **Until the main action changed, connected girl and buddy will continue to have sex after their orgasm**
- **In H you can change the pose on character in public,** Hold alt, Focus the cursor on a character and when the capsule is visible press **Space** to change the position or **N** to change the stand typ (from crouch to stand or from stand to crouch)
- **The component that lead the vagina extra bones is now created in CharaMaker and Events, pussy will appear closed.**
- **During After school period, night will fall on school when the period timer reach half of it.**

Release note kPlugin v1.63

- Buddies have facial expressions and use voices.
 - Mouth have the correct open shape when a girl is performing a blowjob for a buddy.
 - Now, futanari model's facial expression match on player.
 - Futanari model nipples will stands when the excitation raise.
 - Issue where knees and elbows of futanari model were distorted is solved
 - Automatic connections of buddies and girls in public now work.
 - Improve the Force on Pose function (rmb + wheel at piston context)
 - Fixed the rare bug that sometimes occurred at one of the positions contextual to walls.
 - Possibility of Instant chain after out cum was broken, it's restored.
- And some other minor things...

Release note kPlugin v1.62

New stuff

- Adding Futanari in kPlug, you can find this option in kPlug settings common tab (Player is Transgender). In story mode this option can be toggle on/off when roaming at school by pressing F key. By default, the chosen girl model is the first female card found in UserData/chara/female, however it can be changed in kPlug setting (use the select button under «Player is Transgender»). During H, use V key to change clothes state of futa model.
- BepInEx side loaded mod and the number of cards made with those mods are deeply impacting the time to open the futa chara selector from kPlug setting, it's the same when selecting a card... To reduce this issue you can create the folder UserData/chara/kPlugFuta and copy the few female cards you are targetting for player appearence inside. When this folder exists, kPlug will chose it rather than searching in UserData/chara/female

- At home or on map, Diary can be opened with right mouse button.

Fixed

- Missing material on penis in male character maker.

For translations in progress...

English_ui.txt contains new lines at the end of the file, copy them to your custom translation file

Release note kPlugin v1.61

New stuff

- Adding Possibility to add male character in H scene, available in Story and Free H.
- There's an option in kPlug settings (common tab) to disable that, by default this option is enabled.
- During story, it's restricted to home and evening or saturday at school.
- To connect a guy and a girl, move a boy character near a girl, moving a girl near a boy may works depending on the girl exitation or if she has the horny trait.
- Excited girls may connect to other guys by themselves!

Fixed

- Sometimes, when characters from public was still linked together at scene end, kPlug failed during H results, it should be solved now.
- some other minor issue...
