

MIKU / MIKU .json file guide!

Hello! Thank you for your order.

This tutorial is for clients who are unfamiliar with Makeplace and need some insight on **how to get furniture and install the plugins**. Please however refer to this [VISUAL TUTORIAL](#) for placement, as it has a more in depth explanation/troubleshooting section.

How to get Furniture

1. Open your list!

The .list file contains all the furniture you'll need including special notes.

I highly recommend putting these lists into [FFXIV Teamcraft](#) or [Garland Tools](#). These websites will tell you where you can get furniture and what materials you need if you'll be crafting (including dyes!)

2. Buy a Steward/Hokokin and a junkmonger.

These are npcs you can place in your house. I usually buy them from the Independent Sutler in the Mist housing district at x11.6 y11.6

They will sell the majority of furniture that has "Shop Selling Price" at the bottom, which you can see below. I recommend buying all these items first.

3. Buying from the Marketboard or Crafting.

If you're buying everything off the mb then be sure to use [Universalis](#). This will tell you the cheapest prices on your data center. This is updated by players, so be sure to check around each server for more expensive items. If you're a crafter, great! Garland/Teamcraft is a great place to put your list.

4. Untradable Items

Items not sold on the marketboard and you can't get them because of xyz.

My #1 tip is to use party finder. Making a party finder labeled "WTB (item) for (gil price) each" is sufficient. You will have to add a person to your house/fc to trade, so make sure you both agree on the price/trade beforehand if anything goes awry.

Here are some common items I request and ways of obtaining them.

<p>The Legend</p>  <p>Old event item. Buy on Party Finder or Mog Station.</p>	<p>Metal Work or Alchemical Lantern</p>  <p>White scrips, unlocked with lvl 80 omnicafter quest For Every Child a Star</p>	<p>The Queen's Rest</p>  <p>Costs 10 Bozjan Clusters. This item is used for lighting and can be skipped.</p>	<p>Etheiyr's Globe</p>  <p>X100 Bicolor Gemstones. Must have completed the Shared Fates on Mare Lamentorum to rank 3.</p>
--	---	--	--

<p>Sake Set</p>  <p>Doma reconstruction vendor. Doman Enclave (6.9-7.9)</p>	<p>Fool's Threshold</p>  <p>Doma reconstruction.</p>	<p>Any of these prints</p>  <p>Old event items. PF or Mog station.</p>	<p>Usually a price point of 100k-1mil for these items will get you sellers. You can offer more or less based on rarity.</p>
--	---	--	--

5. Dyes

The majority of dyes can be bought from junkmonger NPCs or crafted. Some are special (like beast tribes) and may have to be purchased on the Marketboard.

Pure White/Jet Black can be replaced with Snow White/Soot Black. I know there can be a lot. I'm sorry.

How to put down Furniture

1. Place it down

Good job! You've gotten through the hardest part.

Go into your house and put down all the items, ideally in the basement. Put walls and tables in one section, rugs in another, then tabletop items and wall items in another. This stops the items from snapping onto one another. Showcases and wooden spool tables also need their own special sections.

2. Download FFXIV Quicklauncher

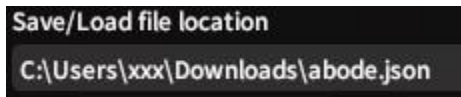

[FFXIV Quicklauncher](#) is a third party tool that allows you to add addons onto your game. You'll need this to download Makeplace and Bdth.

3. Download Makeplace and BDTH

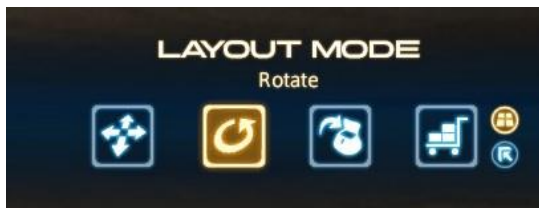

[Makeplace](#) is the app and plugin that lets you automatically place down furniture on a .json. [BDTH](#) will help you place furniture anywhere you want without doing vanilla glitching tricks. Install tutorials are available on their GitHub page.

4. Getting things together

Now that you have your furniture in order, open the Makeplace FFXIVlauncher plugin. You will have to copy & paste the address bar and type in the name of the file, including .json

Then Load the file into the plugin. Make sure you're in rotate mode or you'll get an error.

It should generate a list. Double check there are no items grayed out, as that means you're missing that item. Makeplace will run if items are missing, it will just skip over them.

	Apron Rack	4.458, 2.141, 5.487	-1.571
	Bamboo Plan	-4.610, 0.000, 1.75	0.920

NOTE: If you get a load error...

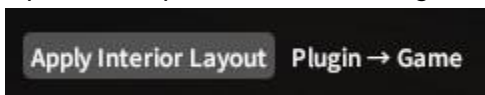

Load Error: The JSON value could not be converted to System.Collections.Generic.Dictionary`2[System.String,System.Object]. Path: \$.exteriorFurniture[0].properties | LineNumber: 4370 | BytePositionInLine: 18.

You will need to download the latest version of the [Makeplace itch.io app](#). Place the .json in the Makeplace save folder, and then open the program. Once opened, press ctrl + s to save the interior. Then you'll need to save the exterior by clicking "go outside" and doing ctrl + s again. This will resolve the error.

5. Let Makeplace work it's magic

Put yourself somewhere your mouse won't accidentally highlight furniture, usually a corner of the stairwell works, otherwise your game will crash while placing items. Select "Apply file layout" and you'll hear a clicking noise, this is the plugin setting your furniture into place.

As long as your mouse doesn't touch anything you should be smooth sailing (but if your game or the plugin crashes regardless simply relog and try again).

If crashing keeps happening regardless, then press "set" on every item manually down the right hand side of the furniture list.

6. Troubleshooting

If everything worked out, your house should be done in 4-8 minutes! Most of the time there aren't issues, but just in case, here's some tips!

Items out of place:

Sometimes Makeplace skips an item, you can fix this by

- A. Opening Makeplace and pressing sort. Then find your item and click "set" on ALL of the items of that type (i.e. all flooring mats). This will snap it into place.
- B. Using BDTH and editing the XYZ coordinates until it's in place (I recommend using the gizmo tool).

Z-clipping:

When textures overlay one another and flicker. Click on one of the offending items and add .02 to the coordinates until it stops (Usually Y). This works 99.9% of the time.

(ya its minecraft same thing)

Wall items snapping to (incorrect) walls:

For items like lofts, you can generally rotate these items so that the “orange” circle isn’t facing the wall and therefore won’t snap to it.

Something’s broken? Like super mega broken? Just let me know and I’ll get right on it! This tutorial is made simply because Makeplace isn’t always perfect.

Thank you for your time!

NOTE: *Using 3rd party tools on your account is not without risk. While my past clients and I have not faced issues with SE staff, stay smart. Don’t say the tool’s names in game. Don’t stream the process. Much like modding, keep it to yourself, and you should be good.*
