Photoshop users

INSTALLATION INSTRUCTIONS AND BRUSH USER GUIDE

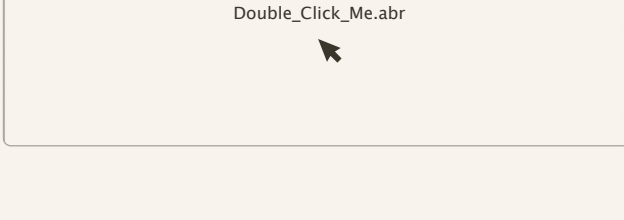

TRUE GRIT
TEXTURE
SUPPLY

**THANKS A MILLION FOR PURCHASING
OUR MONOMANIA LINER BRUSH PACK.
TO INSTALL YOUR BRUSHES FOLLOW ONE OF
THE TWO INSTALLATION METHODS BELOW.**

Quick Install:

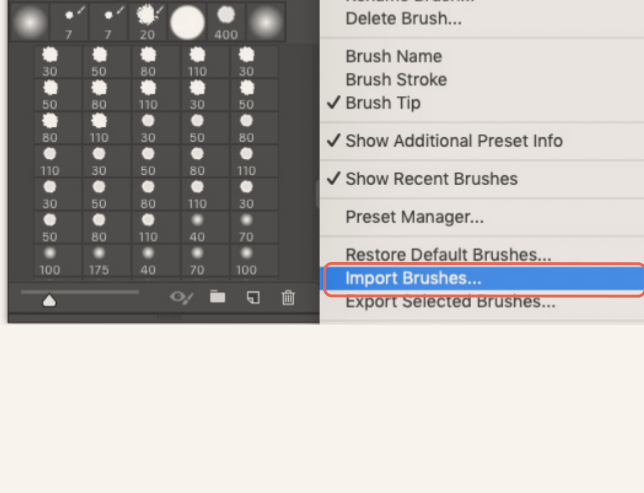

- 1 Open Photoshop.
- 2 Locate the .abr brush preset file in the folder titled 'Install This File'.
- 3 Double click the .abr file to automatically install it into Photoshop.
- 4 The brushes will appear in the Brushes panel whenever the Brush Tool is selected.

Or

Manual Install: (use if Quick Install fails)

- 1 Open Photoshop.
- 2 Open the Brushes Panel Window > Brushes (or Window > Brush Presets in older PS versions) and click the fly-out menu in the top right corner.
- 3 Select Import Brushes... then locate the .abr file in the 'Install These Files' folder and click Open to install.
- 4 The brushes will appear in your Brushes Panel whenever the Brush Tool is selected.

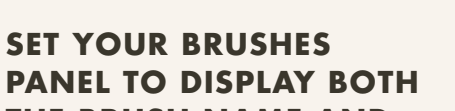

USER GUIDE

GETTING TO KNOW YOUR BRUSHES

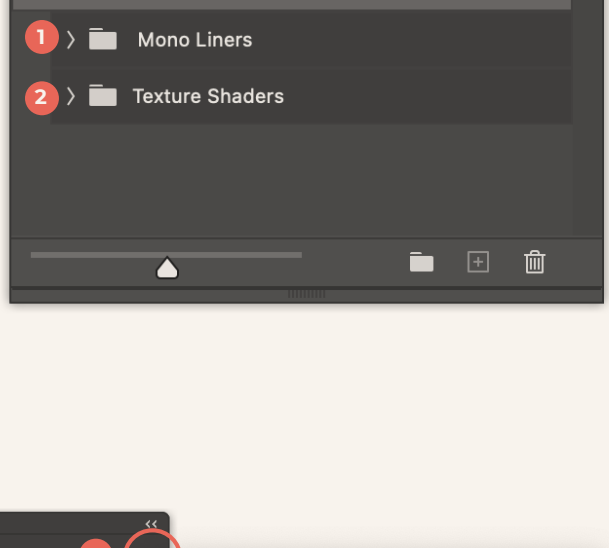

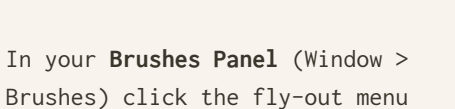

BRUSH ORGANIZATION

Monomania contains over 35 brushes so to keep things organized we've arranged them into two distinct groups according to their style.

1. Mono Liners

2. Texture Shaders

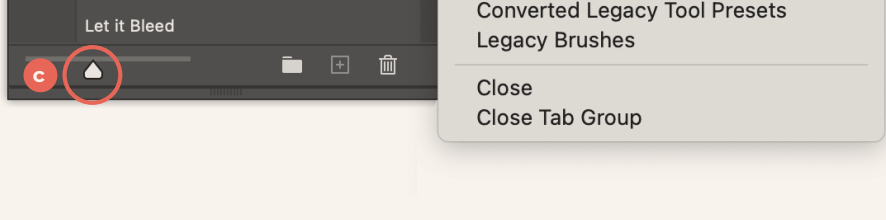

SET YOUR BRUSHES PANEL TO DISPLAY BOTH THE BRUSH NAME AND THE BRUSH STROKE

This makes it super-easy to select brushes by their descriptive names and stroke preview at a glance.

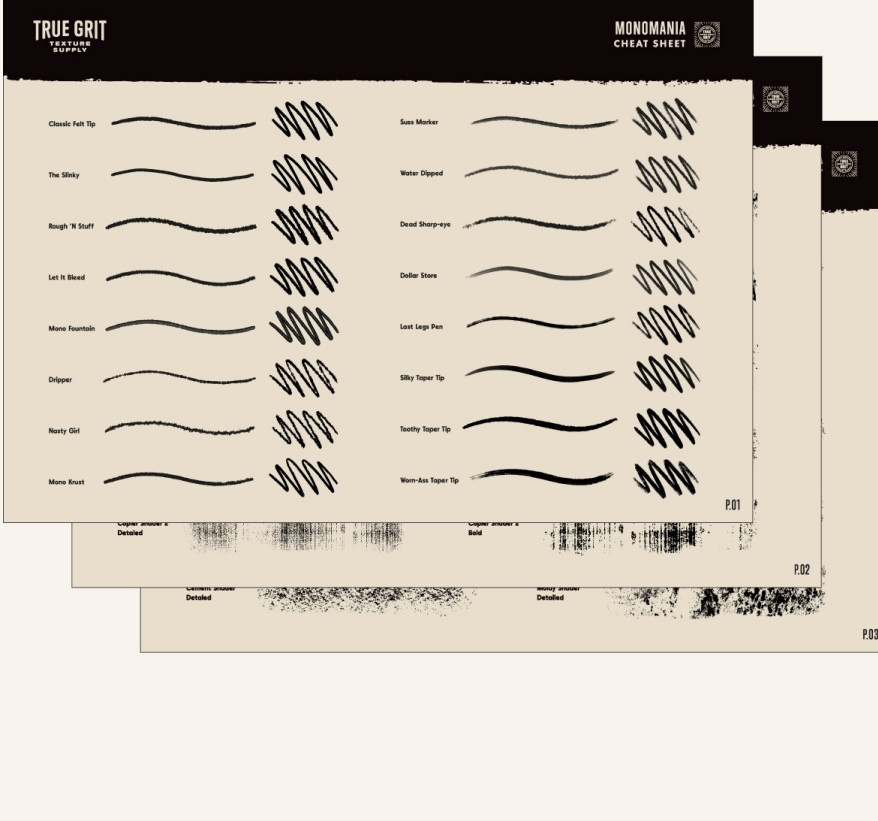

In your Brushes Panel (Window > Brushes) click the fly-out menu on the top right side of the panel (a) and choose Brush Name and Brush Stroke (b).

You can also adjust the size of your brush preview using the size slider at the bottom of the Brushes Panel (c).

PRINTABLE STROKE PREVIEWS

Get familiar with your brushes broader capabilities with our printable stroke preview booklet featuring a full breakdown of brushes and multiple stroke previews for each and every brush.

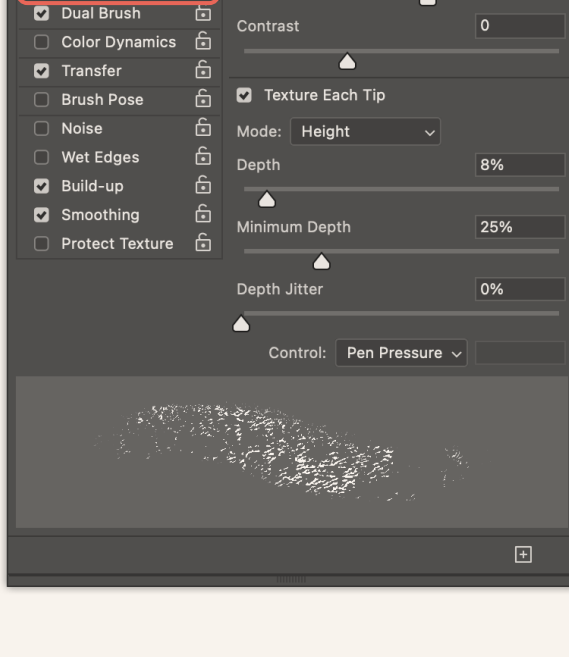

CUSTOMIZING YOUR BRUSHES

CHANGING THE SCALE OF A BRUSHES EMBEDDED TEXTURE

Most of your Monomania brushes use embedded patterns to create textured stroke effects. To adjust the scale of a brushes texture, follow the steps below.

- 1 Go to the Brush Settings Panel (Window > Brush Settings).
- 2 Go to the Texture tab and use the Scale slider to increase or decrease the texture size.

NOTE: Texture scales over 100% may affect the usability of the brush or reduce the quality of the texture effect.

BRUSH STROKE SMOOTHING

Had one too many coffee's or got a case of the deadline jitters? Create super smooth linework using the Brush Smoothing settings to iron out those unwanted shakes and trembles in your linework.

Smoothing is set to 0% by default for most brushes. The higher the smoothing % the smoother your stroke will appear.

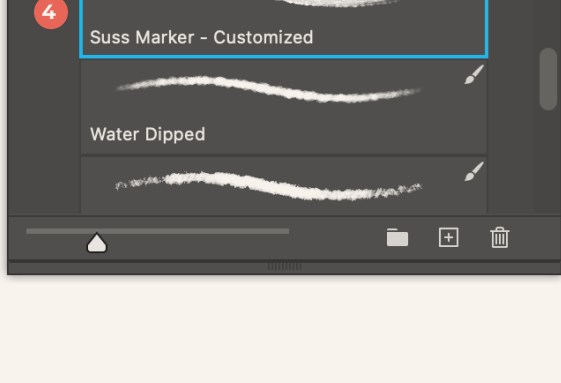

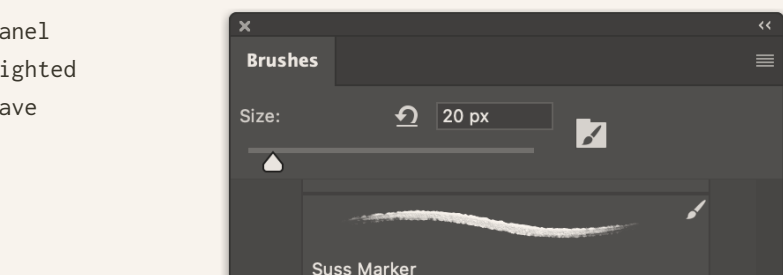

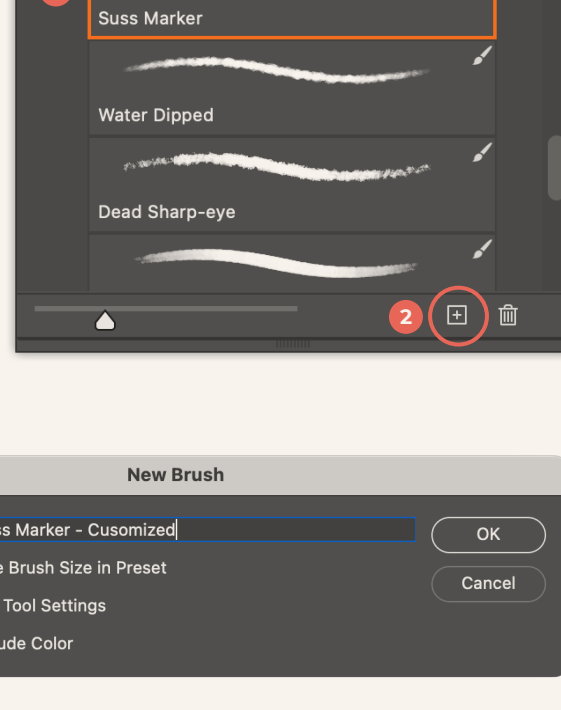

NOTE: Smoothing works best for long brush strokes where small hand movements and jitters are more obvious and will generally make shorter or more expressive strokes more difficult to make. If experiencing "brush lag" when using brush smoothing reset smoothing to 0% or re-select the brush in the brushes panel to reset it to the default setting.

SAVING A COPY OF A CUSTOMIZED BRUSH

Any fine-tuning made to your brushes will be lost when you select a new brush. To save a brush with your custom settings take the following steps.

- 1 Go to the Brush Settings Panel (Window > Brush Settings). Your customized brush will be highlighted in orange to indicate that changes have been made to its default settings.
- 2 Click the 'Create New Brush' button at the bottom of the Brush Settings Panel.
- 3 Check the "Include Tool Settings" checkbox and give your custom brush a recognizable name then click OK to save.
- 4 Your saved brush will appear in the Brushes panel directly below the original and will be highlighted in blue to indicate that the brush settings have been saved permanently to the brush.
